#### **EXECUTIVE SUMMARY**

#### **INTRODUCTION**

As per MoEF & CC, New Delhi Gazette dated 14<sup>th</sup> September 2006 and amended thereof, the proposed mining project is categorized as **Category 'B1'** project.

#### Bhojpur Block No – 39

The project has been proposed by Satyam Distributors, Pro – Yogendra Kumar. The Proposed Sand Mining Project was located on Son River at Block No – 39, Sand Ghat at Mauza- Andhary Mahaji (424) & Imadpur, Dist-Bhojpur (Bihar). LOI issued to lessee via letter no 4395/M, dated 28.10.2022. The Draft EIA report has been prepared according to EIA notification 2006 and its subsequent amendment thereof. TOR of the proposed project has been issued by SEIAA Bihar dated 11-01-2023.

The proposed mining cluster over an area of 64.0 Ha is for river bed sand mining on Son River at Mauja– Andhary Mahaji (424) & Imadpur, District- Bhojpur (Bihar).

**Cluster Situation:** As per District Survey Report Bhojpur the Proposed sand Ghats of block 39 & block 40 are comes in cluster situation whose combined cluster area is 64.0 ha. All the lease area of homogeneous minerals is coming within 500 m radius from each other confirming a cluster situation.

The Details of cluster is given below:

Sand Block Name	Area (Ha)	Production Excavation in Tonn (3 meter)	Applicant
Bhojpur Son 39	24.5	1190700	Satyam Distributors Pro – Yogendra Kumar
Bhojpur Son 40	39.5	1919700	-
Total	64.0	3110400	

It has been proposed to mine around 749700 TPA for applied lease. The estimated project cost for the proposed project is **Rs** 16,25,35,000/- (including auction cost)

### **PROJECT DESCRIPTION**

## **LOCATION**

#### 1. Bhojpur Block 39

The proposed mining lease area falls in Survey of India Toposheet Topo sheet No- 72C/12,. The lease area is located in Mauja – Andhary Mahaji (424) & Imadpur, Tehsil – Sahar, Dist - Bhojpur, State- Bihar. The mine lease co-ordinates are listed below:

Pillar	Latitude (N)	Longitude (E)
No		
1.	25° 12' 29.106" N	84° 30' 12.702" E
2.	25° 12' 35.068" N	84° 30' 0.783" E
3.	25° 12' 48.833" N	84° 30' 28.362" E
4.	25° 12' 59.204" N	84° 30′ 50.317 ″ E
5.	25° 12' 56.116" N	84° 30' 52.146" E
6.	25° 12' 47.839" N	84° 30′ 50.490″ E
7.	25° 12' 50.183" N	84° 30' 46.970" E
8.	25° 12' 52.511" N	84° 30′ 39.040″ E
9.	25° 12' 47.889" N	84° 30' 30.250" E
10.	25° 12' 30.299" N	84° 30' 13.817" E

**Area & production:** The total ML area is 24.5 Ha. Proposed rate of production will be 749700 TPA.

## **Connectivity:**

#### **Bhojpur Block 39**

Bhojpur Block 39 Sand Ghat is well connected to the nearest metalled road 0.35 km distance from the lease. SH-81 is approx. Approx. 1 KM towards N direction., Piro Railway Station, approx. 15 km towards NW direction, JPN International Airport Patna, approx. 74 km towards NE direction.

#### **Salient Features of Project**

#### **Bhojpur Block 39**

Name of the applicant	Satyam Distributors	
	Pro – Yogendra Kumar	
Address of Lessee	Satyam Distributors	
	Pro – Yogendra Kumar	
	S/o- Late Bindeshwari Singh	
	Add – 114/35-A, Brahmsthan road,	
	Shekhpura Bagicha, B.B College, Patna – 800014	

Name of Mine	Sand Mining Project On Son River at Bhojpur Block No 39 Sand Ghat
Village	Mauza – Andhary Mahaji (424) & Imadpur
District & State	Bhojpur, Bihar
Mineral	Sand
Area (ha)	24.5 hectare

#### **MINING**

The mining process is opencast semi-mechanized method without drilling & blasting. This is an open-cast mining project. The operation will be semi-mechanized/OTFM with use of excavators/JCBs truck /tractors combination or Manually etc. The sand will be collected in its existing form.

The mining will be done in a rotational way. As the working is going to be methodical i.e. mining will be done in benches. There would be no risk to the employee working in the mines. Mining will be done in layers.

The deposit will be worked from the surface of the bed up to 3 m bgl or above ground water level, whichever comes first. Hence, at no point of time mining will intersect with ground water table. Mining will be done only during the day time and completely stopped during the monsoon season.

#### **RESERVE AND PRODUCTION**

The area of each bench level has been calculated & multiplied by strike influence to get the volume. Volume is multiplied by bulk density(1.70) to get tonnes.

The bench-wise annual exploitation of sand of is given below:

**Table Block 39** 

Bench Level (mRL)	Length (m)	Width (m)	Depth (m)	Volume (cum)	Tonnes
73.2- 71.7	1455	150	1.5	327375	556537
71.7 – 70.2	1445	140	1.5	303450	515865
Total				630825	1072402

Total Mineable Reserve = 630825 CUM or 1072402 Tonnes

It is a river bed deposit and mined out area shall be replenished each year during monsoon period and depth of quarry shall be filled back by river sand each year and area will restore its original topography.

#### **SITE FACILITIES AND UTILITIES**

#### **Water Supply**

Water will be provided to workers for drinking & domestic purpose. Water will also be required for dust suppression. A total cluster water of 3.76 KLD will be required for the proposed project. Fresh water will be only used for drinking purpose. The water will be supplied from available sources from nearby village.

#### **Temporary Rest Shelter**

A temporary rest shelter will be provided for the workers near to the site for rest. In addition, First aid box along with anti-venoms to counteract poison produced by certain species of small insects, if any and sanitation facility i.e. septic tank or community toilet facility will be provided for the workers.

### **BASELINE ENVIRONMENTAL STATUS**

Environmental data has been collected in relation to proposed mining for Air, Noise, Water, Soil, Flora & Fauna. The baseline environment study was carried out over an area with radial distance of 10 km around the mining lease area during winter season from Dec 2022 to Jan-Feb 2023

#### Meteorology

The Summarized Meteorological Data for the Monitoring Period Dec 2022 to Jan-Feb 2023) is given below:

	Temperature °C		Wind Speed (Km/Hr)		
Month	Min	Max	Min	Max	
DEC 2022	10	20	1	24	
JANUARY 2023	05	19	1	26	
FEBRUARY 2023	12	22	2	32	

## **Table Baseline Environmental Status**

Attribute	Baseline status
Ambient Air Quality	Ambient Air Quality Monitoring (AAQM) has been carried out at 8
	locations. The Particulate Matter (PM10) conc. ranged of 58.63
	μg/m3to 96.47 μg/m3 The Particulate Matter (PM2.5) ranged from
	33.3 μg/m3 to 60.62 μg/m3. Sulphur dioxide (SO2) between 4.52
	μg/m3to 11.3 μg/m3.Oxides of Nitrogen (NO2) between 5.4
	μg/m3to 20.6 μg/m3.The results thus obtained indicate that the
	concentrations of PM10, SO2 and NO2 in the ambient air are well
	within the National Ambient Air Quality (NAAQ) standards for
	Residential and Rural areas.
Noise Levels	The results of the monitoring program indicated that both the
	daytime and night time levels of noise were well within the
	prescribed limits of NAAQS, at all the locations monitored.
Water Quality	The ground water from all sources remains suitable for drinking
	purposes as all the constituents are within the limits prescribed by
	drinking water standards promulgated by IS: 10500.
	Surface water analysis from River Son results it is evident that most
	of the parameters of the samples comply with 'Category C'
	standards of CPCB, indicating their suitability for outdoor bathing.
Soil Quality	Samples collected from identified locations indicate the soil is sandy
	type near project site and the pH value ranging from 7.25 to 8.6,
	which shows that the soil is alkaline in nature. Potassium is found to
	be from 107 mg/kg to 165 mg/kg.
Ecology and	There is no Eco-Sensitive Areas in the study area.
Biodiversity	
Socio Economic	Implementation of river bed sand mining project will provide both
	direct and indirect employment opportunities to the local people.
	Education, health, housing, water, electricity etc. can be further
	improved in the study area. It is expected to improve further to a
	great extent due to the proposed mining project and associated

industrial and commercial activities.

#### **ANTICIPATED ENVIRONMENTALIMPACTS**

#### **Impact on Air Environment**

The proposed mining activities loading and movement of other transport vehicles used in mining will generate dust (SPM/RSPM). Proper water sprinkling shall be carried out at the mine site. The mineral will be transported by road through covered tarpaulin trucks/tippers to reduce the fugitive emission caused by the wind.

#### **Impact on Water Environment**

Mining of sand from within or near *river* has an indirect impact on the physico-chemical habitat characteristics during monsoon season. These characteristics include in stream roughness, elements, depth, velocity, turbidity, sediment transport and stream discharge.

The detrimental effects, if any, to biota resulting from bed material mining are caused by following:

- Alteration of flow patterns resulting from modification of the *river*
- An excess of suspended sediment during monsoon season.

Project activity will be carried out only in the dry part of the Son River. Hence, none of the project activities affect the water environment directly. In the project, it is not proposed to divert or truncate any stream in monsoon season only. No proposal is envisaged for pumping of water either from the *River* (in monsoon) or tapping the ground water.

#### **Impact on Land Environment**

The proposed extraction of stream bed materials, mining below the existing streambed, and alteration of channel-bed form and shape may lead to several impacts such as erosion of channel bed and banks, increase in channel slope, and change in channel morphology if, the operations are not carried out systematically.

The systematic and scientific removal of sand will not cause bed degradation. The silt and clay generated as waste will be used for plantation or filling up low lying area elsewhere. The mining is planned in non monsoon seasons only, so that the excavated area gets replenished gradually during the monsoons each year.

#### **Impact on Noise Environment**

The proposed mining activity is semi-mechanized in nature. No drilling & blasting is envisaged for the mining activity. Hence, the only impact is anticipated is due to movement of vehicles deployed for transportation of minerals. The vehicles will be maintained in good running condition so that noise will be reduced to minimum possible level.

#### **Impact on Biological Environment**

As the proposed mining will be carried out in a scientific manner, not much significant impact is anticipated. No mining will be carried out during the monsoon season to minimize impact on aquatic life which is mainly breeding season for many of the species. The mining site has no vegetation; no clearance of vegetation will be done. Haul roads will be sprinkled with water which would reduce the dust emission, thus avoiding damage to the crops.

#### **Impact on Socio Economic Environment**

The impact of mining activity in the area is positive on the socio-economic environment of the region. Sand mining will be providing employment to local people whenever there is requirement of manpower.

#### POST PROJECT ENVIRONMENTAL MONITORING

S.No.	Description of Parameters	Schedule of Monitoring
1	Air Quality	24 hourly samples twice/thrice a week in each season except monsoon
2	Water Quality (Surface & Groundwater)	Once a season for 4 seasons in a year
3	Soil Quality	Once in a year in project area
4	Noise Level	Twice a year for first two years & then once a year
5	Socio-economic Condition	Once in 3 years
6	Plantation Monitoring	Once in a season

#### **ADDITIONAL STUDIES**

#### **Public Hearing**

Public hearing is yet to be conducted.

#### **Risk Assessment**

The complete mining operation will be carried out under the management control and direction of a qualified mine manager holding. The DGMS have been regularly issuing standing orders, model standing orders and circulars to be followed by the mine management in case of disaster, if any. Moreover, mining staff will be sent to refresher courses from time to time to keep them alert.

#### **Disaster Management Plan**

Emergency preparedness is an important aspect in the planning of Disaster Management. Personnel would be trained suitably and prepared mentally and physically in emergency response through carefully planned, simulated procedures. Similarly, the key personnel and essential personnel shall be trained in the operations.

#### **PROJECT BENEFITS**

**Physical Benefits:** Road Transport, Market, Enhancement of green cover & Creation of community assets.

**Social Benefits:** Increase in Employment Potential, Contribution to the Exchequer, Increased Health related activities, Educational attainments & Strengthening of existing community facilities.

#### **Environmental Benefits:**

- Controlling *river* channel and protection of banks.
- Reducing submergence of adjoining agricultural lands due to flooding.
- > Reducing aggradation of *river* level.
- ➤ A check on illegal mining activity.

#### CORPORATE SOCIAL RESPONSIBILITY

2% of capital cost of the project cost will be allotted for the Corporate Environmental Responsibility as per OM dated 1<sup>st</sup> May 2018. The following has been proposed considering the needs & demand of the people.

CER cost for **Block 39** will be 2% of the total project cost. This amount will be used for social welfare. CSR COST is 16,25,35,000/-x 2% = Rs. 32,50,700/-.

For each activity the funds to be earmarked by the proponent will be decided after discussion with the local authority/people and the beneficiaries during Public Hearing. It has been planned to undertake a concurrent evaluation of the activities to be taken up under the CER programme.

#### **PLANTATION:**

- The project will not lead to any tree cutting. However, asocial responsibility, greenery will be developed along the both sides of road and the bank of river. Community services will be deployed in raising these plantations. Trees of economic importance and native origin such as fruit trees shall be planted.
- Approx. 425 trees will be planted around haul road during the plan period.
- The trees proposed for plantation are:
- As per Sustainable Sand Management & Mining Guidelines 2016, minimum 5 plant per hectare will be proposed for development of greenbelt but in this cluster of projects 10 plants per hectare will be proposed for better condition of environment.
- Peepal, Arjun, Jamun, Banyan, Neem, Mango etc trees will be planted.

#### ENVIRONMENTAL MANAGEMENT PLAN (EMP)

- Extraction will be done from the bed leaving safety zone from bank.
- The maximum working depth will remain above ground water table of the area.
- Provide health facilities to the workers & surrounding people in the impact area to reduce the health impacts.
- Ensuring wildlife protection & arranging awareness campaigns for the same.
- Minimize activities that release fine sediment to the *river*.
- Effective mitigation measures will be adopted to minimize disturbance during transportation & handling of minerals

- Establishment of reclamation program with plantation of local/native & fast growing species
- Establishment of restoration plan during the closure of mine at the onset of monsoon season.
- Establishment of effective Disaster Management Plan to take timely precautionary measures to avoid effects of impending disasters.
- Establishment of effective Monitoring Program monitored by Environment Management Cell.

#### **BUDGET ALLOCATION FOR EMP IMPLEMENTATION**

#### Table, Budget of EMP (Block-39)

Sl. No	Description	Capital Cost (lakh)	Recurring Cost (lakh)
1	Pollution Control & Dust Suppression	Nil	2.0
2	Pollution Monitoring i) Air pollution ii) Water pollution iii) Soil pollution iv) Noise Pollution		2.0
3	Plantation and salary for one gardener (part time basis).	2.45	0.5
4	Haul road Maintenance Cost	0.875	1.50
	TOTAL	3.325	6.0

Note: \*245 plants \* 1000 Rs (for each plants including hedges and fences) =Rs 245000/-

- Salary of Labour for haul road maintenance 2 labor\*300=600 per day
- 600\* 250= 1,50,000/-
- \* 2.5 lakh per kilometer (2,50,000 \*0.35 km haul road) =87,500/-

#### **CONCLUSION**

Based on the EIA study it is observed that there will be an increase in the dust pollution, which will be controlled by sprinkling of water and plantation. There will be an insignificant impact on ambient environment and ecology due to the mining activities moreover the mining operation will lead to direct and indirect employment generation in the area. Green belt

development around the area will also be taken up as an effective pollution mitigative technique, as well as to control the pollutants released from the premises of the Mine. Monitoring program will be followed till the mining operations continue. Hence, it can be summarized that the development of the mine will have a positive impact on the socioeconomic environment of the area and lead to sustainable development of the region.

## कार्यकारी सारांश

## ❖ परिचय

MoEF & CC (एमओईएफ एंड सीसी), नई दिल्ली राजपत्र दिनांक 14 सितंबर 2006 और उसमें समय समय पर किये गए संशोधन के अनुसार, प्रस्तावित खनन परियोजना को श्रेणी 'बी1' परियोजना के रूप में वर्गीकृत किया गया है।

## भोजपुर ब्लॉक संख्या - 39

परियोजना के प्रस्ताव सत्यम डिस्ट्रीब्यूटर्स, प्रो- योगेंद्र कुमार ने दिया है। प्रस्तावित रेत खनन परियोजना मौजा अंधारी महाजी और इमादपुर, तहसील – सहार, जिला- भोजपुर (बिहार) में ब्लॉक संख्या - 39 रेत घाट पर सोन नदी पर स्थित है। पत्र संख्या 4395/एम दिनांक 28.10.2022 के माध्यम से पट्टेदार को एलओआई जारी किया गया।

ईआईए अधिसूचना 2006 और इसके बाद के संशोधन के अनुसार ड्राफ्ट ईआईए रिपोर्ट तैयार की गई है। प्रस्तावित परियोजना का टीओआर SEIAA बिहार दिनांक 11-01-2023 द्वारा जारी किया गया है।

- मौजा-अंधरी महाजी और इमादपुर, जिला-भोजपुर (बिहार) में सोन नदी पर नदी तल रेत खनन के लिए 64.0 हेक्टेयर क्षेत्र में प्रस्तावित खनन क्लस्टर है।
- क्लस्टर स्थिति: जिला सर्वेक्षण प्रतिवेदन भोजपुर के अनुसार ब्लॉक 39 एवं ब्लॉक 40 के प्रस्तावित बालू घाट क्लस्टर स्थिति में आते हैं जिनका संयुक्त क्लस्टर क्षेत्र 64.0 हेक्टेयर है। सजातीय खिनजों का समस्त पट्टा क्षेत्र एक दूसरे से 500 मीटर के दायरे में आ रहा है जो एक समूह स्थिति की पुष्टि करता है।

## क्लस्टर का विवरण नीचे दिया गया है:

ब्लॉक का नाम	क्षेत्र (हेक्टेयर)	उत्पादन उत्खनन (3 मीटर) टन में	आवेदक
भोजपुर सोन 39	24.5	1190700	सत्यम डिस्ट्रीब्यूटर्स प्रो- योगेंद्र कुमार

भोजपुर सोन 40	39.5	1919700	-
कुल	64.0	3110400	

आवेदित पट्टे के लिए प्रति वर्ष लगभग 749700 टन खनन प्रस्तावित किया गया है, प्रस्तावित परियोजना के लिए अनुमानित परियोजना लागत 16,25,35,000/- रुपये (नीलामी लागत सहित) है।

## परियोजना विवरण

## स्थिति:

## 1. भोजपुर रेत ब्लॉक 39 (सोन नदी)

प्रस्तावित खनन पट्टा क्षेत्र सर्वे ऑफ इंडिया टोपोशीट टोपो शीट संख्या- 72C/12 के अंतर्गत आता है। पट्टा क्षेत्र मौजा अंधारी महाजी और इमादपुर, तहसील – सहार, जिला-भोजपुर, राज्य- बिहार में स्थित है। खान पट्टा समन्वय नीचे सूचीबद्ध हैं:

स्तंभ	अक्षांश (एन)	देशांतर (ई)
1.	25° 12' 29.106" N	84° 30' 12.702" E
2.	25° 12' 35.068" N	84° 30' 0.783" E
3.	25° 12' 48.833" N	84° 30' 28.362" E
4.	25° 12' 59.204" N	84° 30′ 50.317 ″ E
5.	25° 12' 56.116" N	84° 30' 52.146" E
6.	25° 12' 47.839" N	84° 30' 50.490" E
7.	25° 12' 50.183" N	84° 30' 46.970" E
8.	25° 12' 52.511" N	84° 30' 39.040" E
9.	25° 12' 47.889" N	84° 30' 30.250" E
10.	25° 12' 30.299" N	84° 30' 13.817" E

💠 क्षेत्र और उत्पादन: कुल क्षेत्रफल २४.५ हेक्टेयर है। उत्पादन की प्रस्तावित दर ७४९७०० टीपीए होगी।

## संयोजकता

## 1. भोजपुर रेत ब्लॉक 39 (सोन नदी)

भोजपुर ब्लॉक 39 रेत घाट पट्टे से 0.35 कि.मी. की दूरी पर निकटतम पक्की सड़क से अच्छी तरह से जुड़ा हुआ है। SH 81 लगभग 1.0 किमी उत्तर दिशा में है पीरो रेलवे स्टेशन, लगभग 15.0 किमी उत्तर पश्चिम दिशा की ओर है।

## परियोजना की मुख्य विशेषताएं

## 1. भोजपुर रेत ब्लॉक 39 (सोन नदी)

आवेदक का नाम	सत्यम डिस्ट्रीब्यूटर्स
	प्रो- योगेंद्र कुमार
पट्टेदार का पता	सत्यम डिस्ट्रीब्यूटर्स
	प्रो- योगेंद्र कुमार
	पुत्र- स्वर्गीय बिंदेश्वरी सिंह
	जोड़ें – 114/35-ए, ब्रह्मस्थान रोड,
	शेखपुरा बागीचा, बी बी कॉलेज, पटना - 800014
नाम	भोजपुर ब्लॉक नं- 39 रेत घाट, मौजा-बागा, जिला-भोजपुर (बिहार) में सोन नदी पर रेत खनन परियोजना
गाँव	मौजा - अंधारी महाजी और इमादपुर,
जिला और राज्य	भोजपुर, बिहार
टोपोशीट नंबर	72C/12
खनिज	रेत
क्षेत्र (हेक्टेयर)	24.5 हेक्टेयर

## ड्रिलिंग

ड्रिलिंग और ब्लास्टिंग की आवश्यकता नहीं हैं।

### खिनज का उपयोग

रेत का उपयोग निर्माण कार्यवो में किया जाता है सड़क निर्माण में भी इसका उपयोग किया जाता है

### 🌣 खनन

खनन प्रक्रिया ड्रिलिंग और ब्लास्टिंग के बिना खुली अर्ध-मशीनीकृत विधि है। यह एक ओपन कास्ट माइनिंग प्रोजेक्ट है। उत्खनन/जेसीबी ट्रक/ट्रैक्टर संयोजन या मैन्युअल आदि के उपयोग के साथ संचालन अर्ध-मशीनीकृत/ओटीएफएम होगा। रेत को अपने मौजूदा रूप में एकत्र किया जाएगा।

खनन रोटेशनल तरीके से किया जाएगा। चूंकि काम व्यवस्थित होने जा रहा है यानी बेंचों में खनन किया जाएगा। खदान में काम करने वाले कर्मचारी को कोई खतरा नहीं होगा। खनन परतों में किया जाएगा।

निक्षेप को संस्तर की सतह से 3 एमबीजीएल या भूजल स्तर से ऊपर, जो भी पहले आए, तक कार्य किया जाएगा। इसलिए, किसी भी समय खनन भूजल स्तर को नहीं काटेगा। खनन केवल दिन के समय किया जाएगा और मानसून के मौसम में पूरी तरह बंद कर दिया जाएगा।

### रिजर्व और उत्पादन

खनन योग्य भंडार की गणना सतह से 3 मीटर की गहराई तक की गई है। टनभार प्राप्त करने के लिए वॉल्यूम को बल्क डेंसिटी (1.70 g/cm3) से गुणा किया जाता है।

हर साल मानसून के मौसम के दौरान नदी तल से उत्खनन किए गए खनिजों की फिर से भरपाई (रिप्लेनिशमेंट) हो जाएग। नदी के पैलियो चैनल से संबंधित क्षेत्र को समतल करके वापस बहाल किया जाएगा।

बेंचवार रेत का वार्षिक दोहन नीचे दिया गया है:

ब्लॉक नं: 39

बेंच स्तर (mRL)	लंबाई (M)	चौड़ाई (M)	गहराई (M)	मात्रा (घन मीटर)	ਟਜ
73.2- 71.7	1455	150	1.5	327375	556537
71.7 – 70.2	1445	140	1.5	303450	515865

Total		630825	1072402

कुल खनन योग्य रिजर्व = 630825 घन मीटर या 1072402 टन

यह नदी तल जमा है और खनन क्षेत्र हर साल मानसून अविध के दौरान फिर से भर जाएगा और खदान की गहराई हर साल नदी की रेत से भर जाएगा (रिप्लेनिशमेंट) और क्षेत्र अपनी मूल स्थलाकृति बहाल को कर देगा।

## साइट स्विधाएं और उपयोगिताएँ

## • जलापूर्ति

श्रमिकों को पीने व घरेलू उपयोग के लिए पानी उपलब्ध कराया जाएगा। धूल के दमन के लिए भी पानी की आवश्यकता होगी। प्रस्तावित परियोजना के लिए 3.76 केएलडी के जल की आवश्यकता होगी। ताजे पानी का उपयोग केवल पीने के उद्देश्य के लिए किया जाएगा। आसपास के गांव के उपलब्ध स्रोतों से पानी की आपूर्ति की जाएगी।

## • अस्थायी विश्राम गृह

विश्राम के लिए स्थल के पास श्रमिकों के लिए एक अस्थायी विश्राम आश्रय प्रदान किया जाएगा। इसके अलावा, छोटे कीड़ों की कुछ प्रजातियों द्वारा उत्पादित जहर का मुकाबला करने के लिए एंटी-वेनम के साथ प्राथमिक उपचार बॉक्स, यदि कोई हो और श्रमिकों के लिए स्वच्छता सुविधा जैसे सेप्टिक टैंक या सामुदायिक शौचालय की सुविधा प्रदान की जाएगी।

## • आधारभूत पर्यावरणीय स्थिति

वायु, ध्विन, जल, मिट्टी, वनस्पित एवं जीव-जन्तुओं के लिए प्रस्तावित खनन के संबंध में पर्यावरणीय डाटा एकत्र किया गया है। बेसलाइन पर्यावरण अध्ययन दिसंबर 2022 से जनवरी-फरवरी 2023 तक सर्दियों के मौसम के दौरान खनन पट्टा क्षेत्र के आसपास 10 किमी की रेडियल दूरी वाले क्षेत्र में किया गया था।

#### • मौसम विज्ञान

निगरानी अवधि दिसंबर 2022 से जनवरी-फरवरी 2023 के लिए संक्षिप्त मौसम संबंधी डेटा नीचे दिया गया है:

	तापम	तापमान °C ह		हवा की गति (किमी/घंटा)	
महीना	न्यूनतम	अधिकतम	न्यूनतम	अधिकतम	
दिसम्बर 2022	10	20	1	24	
जनवरी 2023	05	19	1	26	
फरवरी 2023	12	22	2	32	

## आधारभूत पर्यावरणीय स्थिति

गुण	आधारभूत स्थिति
एम्बिएंट(परिवेशी) वायु गुणवत्ता	एम्बिएंट (परिवेशी) वायु गुणवत्ता निगरानी से पता चलता है कि सभी
	8 AQ निगरानी स्टेशनों में PM2.5 की न्यूनतम और अधिकतम
	सांद्रता क्रमशः 33.3 µg/m3 to 60.62 µg/m3 पाई गई; PM10 58.63
	μg/m3to 96.47 μg/m3 की सीमा में था जहां तक गैसीय प्रदूषकों SO2
	और NO2 का संबंध है, आवासीय और ग्रामीण क्षेत्रों के लिए 80
	µg/m3 की निर्धारित CPCB सीमा किसी भी स्टेशन पर पार नहीं की
	गई है।
शोर का स्तर	निगरानी कार्यक्रम के परिणामों ने संकेत दिया कि निगरानी किए गए
	सभी स्थानों पर शोर के दिन और रात दोनों समय एनएएक्यूएस की
	निर्धारित सीमा के भीतर थे।
पानी की गुणवत्ता	सभी स्रोतों से भूजल पीने के उद्देश्यों के लिए उपयुक्त रहता है क्योंकि
	सभी घटक ।S: 10500 द्वारा प्रख्यापित पेयजल मानकों द्वारा निर्धारित
	सीमा के भीतर हैं।
	सोन नदी के सतही जल विश्लेषण के परिणामों से यह स्पष्ट होता है कि
	नमूनों के अधिकांश पैरामीटर सीपीसीबी के 'श्रेणी बी' मानकों का
	अनुपालन करते हैं, जो इंगित करता है यह जल स्नान के लिए
	उपयुक्त हैं।
मिट्टी की गुणवत्ता	चिन्निहित किए गए स्थानों से एकत्र किए गए नमूने इंगित करते हैं
	कि प्रोजेक्ट साइट के आसपास की मिटटी रेतीली प्रकार की है
	और पीएच मान 7.25 से 8.26 के बीच है, जो दर्शाता है कि मिट्टी

	प्रकृति में थोड़ी क्षारीय है।
पारिस्थितिकी और जैव विविधता	अध्ययन क्षेत्र में कोई पर्यावरण-संवेदनशील क्षेत्र नहीं है।
सामाजिक आर्थिक	नदी तल पर रेत खनन परियोजना के कार्यान्वयन से स्थानीय
	लोगों को प्रत्यक्ष और अप्रत्यक्ष दोनों तरह के रोजगार के
	अवसर मिलेंगे।
	अध्ययन क्षेत्र में शिक्षा, स्वास्थ्य, आवास, पानी, बिजली
	आदि को और बेहतर किया जा सकता है। उम्मीद है कि
	प्रस्तावित खनन परियोजना और संबद्ध औद्योगिक और
	व्यावसायिक गतिविधियों के कारण इसमें काफी हद तक और
	सुधार होगा।

## 🌣 अनुमानित पर्यावरणीय प्रभाव

## • वायु पर्यावरण पर प्रभाव

प्रस्तावित खनन गतिविधियां खनन में प्रयुक्त अन्य परिवहन वाहनों की लोडिंग और आवाजाही से धूल उत्पन्न होगी। खदान स्थल पर उचित जल छिड़काव किया जाएगा। हवा से होने वाले क्षणिक उत्सर्जन को कम करने के लिए खनिज को ढके हुए तिरपाल ट्रकों/टिप्परों के माध्यम से सड़क मार्ग से ले जाया जाएगा।

## जल पर्यावरण पर प्रभाव

नदी के भीतर या उसके पास से रेत के खनन का मानसून के मौसम के दौरान भौतिक-रासायनिक आवास विशेषताओं पर अप्रत्यक्ष प्रभाव पड़ता है। इन विशेषताओं में धारा खुरदरापन, तत्व, गहराई, वेग, मैलापन, तलछट परिवहन और धारा निर्वहन शामिल हैं।

संस्तर सामग्री खनन से उत्पन्न बायोटा पर हानिकारक प्रभाव, यदि कोई हो, निम्नलिखित के कारण होते हैं:

- नदी के परिवर्तन के परिणामस्वरूप प्रवाह पैटर्न में बदलाव
- मानसून के मौसम में निलम्बित तलछट की अधिकता।

परियोजना गतिविधि केवल सोन नदी के शुष्क भाग में की जाएगी। इसलिए, परियोजना की कोई भी गतिविधि सीधे तौर पर जल पर्यावरण को प्रभावित नहीं करती है। परियोजना में केवल मानसून के मौसम में किसी धारा को मोड़ने या काट देने का प्रस्ताव नहीं है। नदी (मानसून में) या भूजल दोहन से पानी की पंपिंग के लिए किसी प्रस्ताव की परिकल्पना नहीं की गई है।

## भूमि पर्यावरण पर प्रभाव

स्ट्रीम बेड सामग्री का प्रस्तावित निष्कर्षण, मौजूदा स्ट्रीमबेड के नीचे खनन, और चैनल-बेड फॉर्म और आकार में परिवर्तन से चैनल बेड और बैंकों के क्षरण, चैनल ढलान में वृद्धि, और चैनल आकारिकी में परिवर्तन जैसे कई प्रभाव हो सकते हैं, यदि, संचालन व्यवस्थित रूप से नहीं किया जाता है।

रेत के व्यवस्थित और वैज्ञानिक तरीके से हटाने से क्यारियों का क्षरण नहीं होगा। कचरे के रूप में उत्पन्न गाद और मिट्टी का उपयोग वृक्षारोपण के लिए या निचले इलाकों को कहीं और भरने के लिए किया जाएगा। खनन की योजना गैर-मानसून मौसम में ही बनाई जाती है, ताकि उत्खनित क्षेत्र प्रत्येक वर्ष मानसून के दौरान धीरे-धीरे भर जाए (रिप्लेनिशमेंट)।

## शोर पर्यावरण पर प्रभाव

प्रस्तावित खनन गतिविधि प्रकृति में अर्ध-मशीनीकृत है। खनन गतिविधि के लिए कोई ड्रिलिंग और ब्लास्टिंग परिकल्पित नहीं है। इसलिए, केवल खनिजों के परिवहन के लिए तैनात वाहनों की आवाजाही के कारण प्रभाव का अनुमान लगाया गया है। वाहनों को अच्छी चालू स्थिति में रखा जाएगा तािक शोर को न्यूनतम संभव स्तर तक कम किया जा सके।

## जैविक पर्यावरण पर प्रभाव

चूंकि प्रस्तावित खनन वैज्ञानिक तरीके से किया जाएगा, इसिलए ज्यादा महत्वपूर्ण प्रभाव का अनुमान नहीं है। जलीय जीवन पर प्रभाव को कम करने के लिए मानसून के मौसम के दौरान कोई खनन नहीं किया जाएगा जो कि कई प्रजातियों के लिए मुख्य रूप से प्रजनन का मौसम है। खनन स्थल पर कोई वनस्पति नहीं है; वनस्पति की सफाई नहीं की जाएगी। ढोने वाली सड़कों पर पानी का छिड़काव किया जाएगा जिससे धूल का उत्सर्जन कम होगा और इस प्रकार फसलों को होने वाले नुकसान से बचा जा सकेगा।

## सामाजिक आर्थिक पर्यावरण पर प्रभाव

क्षेत्र में खनन गतिविधि का प्रभाव क्षेत्र के सामाजिक-आर्थिक वातावरण पर सकारात्मक है। रेत खनन से स्थानीय लोगों को जब भी श्रमबल की आवश्यकता होगी रोजगार उपलब्ध होगा।

## पोस्ट प्रोजेक्ट पर्यावरण निगरानी

क्रम संख्या	पैरामीटर्स का विवरण	निगरानी की अनुसूची
1	हवा की गुणवत्ता	मानसून को छोड़कर प्रत्येक मौसम में सप्ताह में दो बार/तीन बार 24 घंटे के नमूने
2	जल गुणवत्ता (सतह और भूजल)	साल में 4 सीजन के लिए एक बार
3	मिट्टी की गुणवत्ता	परियोजना क्षेत्र में वर्ष में एक बार
4	शोर स्तर	साल में दो बार पहले दो साल और फिर साल में एक बार
5	सामाजिक-आर्थिक स्थिति	3 साल में एक बार
6	वृक्षारोपण निगरानी	एक बार एक मौसम में

## अतिरिक्त अध्ययन

## • सार्वजनिक सुनवाई

जन सुनवाई अभी बाकी है।

## ❖ जोखिम आकलन

पूर्ण खनन कार्य एक योग्य खदान प्रबंधक होल्डिंग के प्रबंधन नियंत्रण और निर्देशन में किया जाएगा। डीजीएमएस नियमित रूप से स्थायी आदेश, मॉडल स्थायी आदेश और आपदा, यदि कोई हो, के मामले में खान प्रबंधन द्वारा पालन किए जाने वाले परिपत्र जारी करता रहा है। साथ ही खनन कर्मचारियों को सतर्क रखने के लिए समय-समय पर रिफ्रेशर कोर्स में भेजा जाएगा।

#### आपदा प्रबंधन योजना

आपदा प्रबंधन की योजना में आपातकालीन तैयारी एक महत्वपूर्ण पहलू है। कार्मिकों को उचित रूप से प्रशिक्षित किया जाएगा और सावधानीपूर्वक नियोजित, सिम्युलेटेड प्रक्रियाओं के माध्यम से आपातकालीन प्रतिक्रिया में मानसिक और शारीरिक रूप से तैयार किया जाएगा। इसी तरह, प्रमुख कर्मियों और आवश्यक कर्मियों को संचालन में प्रशिक्षित किया जाएगा।

## परियोजना लाभ

- भौतिक लाभ: सड़क परिवहन, बाजार, हरित आवरण में वृद्धि और सामुदायिक संपत्तियों का निर्माण।
- सामाजिक लाभः रोजगार क्षमता में वृद्धि, राजकोष में योगदान, स्वास्थ्य संबंधी गतिविधियों में वृद्धि,
   शैक्षिक उपलिध्यां और मौजूदा सामुदायिक सुविधाओं का सुदृढ़ीकरण।

## पर्यावरणीय लाभ:

- नदी चैनल को नियंत्रित करना और बैंकों की सुरक्षा करना।
- बाढ़ के कारण आसपास की कृषि भूमि के इबने को कम करना।
- नदी के स्तर के उन्नयन को कम करना।
- अवैध खनन गतिविधि पर एक जांच।

## कॉर्पोरेट की सामाजिक जिम्मेदारी

दिनांक 1 मई 2018 के कार्यालय ज्ञापन के अनुसार परियोजना लागत की पूंजीगत लागत का 2% कॉर्पोरेट पर्यावरणीय उत्तरदायित्व के लिए आवंटित किया जाएगा। लोगों की जरूरतों और मांग को ध्यान में रखते हुए निम्नलिखित प्रस्तावित किया गया है।

सैंड ब्लॉक 39 के लिए सीईआर (CER) लागत कुल परियोजना लागत का 2% होगी। इस राशि का उपयोग समाज कल्याण के लिए किया जाएगा। सीएसआर लागत 16,25,35,000/-x 2%= रु. 32,50,700/-.

प्रत्येक गतिविधि के लिए प्रस्तावक द्वारा निर्धारित की जाने वाली धनराशि का निर्धारण जन सुनवाई के दौरान स्थानीय प्राधिकारी/लोगों एवं हितग्राहियों से चर्चा के बाद किया जायेगा। सीईआर कार्यक्रम के तहत की जाने वाली गतिविधियों का समवर्ती मूल्यांकन करने की योजना बनाई गई है।

## वृक्षारोपणः

- परियोजना से कोई पेड़ नहीं कटेगा। तथापि, असामाजिक उत्तरदायित्व, सड़क के दोनों ओर और नदी के किनारे हरियाली विकसित की जाएगी। इन वृक्षारोपण को बढ़ाने के लिए सामुदायिक सेवाओं को तैनात किया जाएगा। आर्थिक महत्व के पेड़ और देशी मूल के पेड़ जैसे फलों के पेड़ लगाए जाएंगे।
- लगभग। योजना अविध में हॉल रोड के आसपास 425 पौधे रोपे जाएंगे।
- वृक्षारोपण के लिए प्रस्तावित पेड़ हैं:
- सस्टेनेबल सैंड मैनेजमेंट एंड माइनिंग गाइडलाइंस 2016 के अनुसार ग्रीनबेल्ट के विकास के लिए प्रति हेक्टेयर न्यूनतम 5 पौधे प्रस्तावित किए जाएंगे लेकिन पर्यावरण की बेहतर स्थिति के लिए परियोजनाओं के इस समूह में 10 पौधे प्रति हेक्टेयर प्रस्तावित किए जाएंगे।
- पीपल, अर्जुन, जामुन, बरगद, नीम, आम आदि के पेड़ लगाए जाएंगे।

## पर्यावरण प्रबंधन योजना (ईएमपी)

- > रिवर बैंक से सुरक्षा क्षेत्र छोड़कर नदी तल से निकासी की जाएगी।
- > अधिकतम काम करने की गहराई क्षेत्र के भूजल तालिका के ऊपर रहेगी।
- स्वास्थ्य प्रभावों को कम करने के लिए प्रभाव क्षेत्र में श्रमिकों और आसपास के लोगों को
   स्वास्थ्य सुविधाएं प्रदान किया जायेगा ।
- वन्यजीव संरक्षण सुनिश्चित करना और उसी के लिए जागरूकता अभियान की व्यवस्था किया
   जायेगा।
- 🕨 नदी में महीन तलछट छोड़ने वाली गतिविधियों को किया जायेगा।
- खिनजों के परिवहन और प्रबंधन के दौरान गड़बड़ी को कम करने के लिए प्रभावी शमन
   उपाय अपनाए जाएंगे
- स्थानीय/देशी और तेजी से बढ़ने वाली प्रजातियों के वृक्षारोपण के साथ सुधार कार्यक्रम की
   स्थापना किया जायेगा
- मानसून के मौसम की शुरुआत में खान के बंद होने के दौरान बहाली योजना की स्थापना किया जायेगा
- आसन्न आपदाओं के प्रभाव से बचने के लिए समय पर एहतियाती उपाय करने के लिए प्रभावी आपदा प्रबंधन योजना की स्थापना।
- 🕨 पर्यावरण प्रबंधन प्रकोष्ठ द्वारा प्रभावी निगरानी कार्यक्रम की स्थापना किया जायेगा।

## ईएमपी कार्यान्वयन के लिए बजट आवंटन

टेबल, ईएमपी का बजट (ब्लॉक -39)

क्रम संख्या	विवरण	पूंजी लागत (लाख)	आवर्ती लागत (लाख)
1	प्रदूषण नियंत्रण और धूल दमन	Nil	2.0
2	प्रदूषण निगरानी i) वायु प्रदूषण ii) मृदा प्रदूषण iii) जल प्रदूषण iv) ध्वनि प्रदूषण		2.0
3	एक माली के लिए वृक्षारोपण और वेतन (अंशकालिक आधार पर)	2.45	0.5
4	परिवहन सड़क रखरखाव लागत	0.875	1.50
TOTAL		3.325	6.0

नोट: \*245 पौधे \* 1000 रुपये (हेज और बाड़ सहित प्रत्येक पौधे के लिए) = 2,45,000/- रुपये

## निष्कर्ष

ईआईए अध्ययन के आधार पर यह देखा गया है कि धूल प्रदूषण में वृद्धि होगी, जिसे पानी के छिड़काव और वृक्षारोपण द्वारा नियंत्रित किया जाएगा। खनन गतिविधियों के कारण (एम्बिएंट) परिवेशी पर्यावरण और पारिस्थितिकी पर नगण्य प्रभाव पड़ेगा, इसके अलावा खनन संचालन से क्षेत्र में प्रत्यक्ष और अप्रत्यक्ष रोजगार सृजन होगा। क्षेत्र के चारों ओर हरित पट्टी का विकास एक प्रभावी प्रदूषण न्यूनीकरण तकनीक के साथ-साथ खान परिसर से निकलने वाले प्रदूषकों को नियंत्रित करने के लिए भी किया जाएगा। खनन कार्य जारी रहने तक निगरानी कार्यक्रम का पालन किया जाएगा। इसलिए, यह संक्षेप में कहा जा सकता है कि खान के विकास से क्षेत्र के सामाजिक-आर्थिक वातावरण पर सकारात्मक प्रभाव पड़ेगा और क्षेत्र के सतत विकास को बढावा मिलेगा।

\*\*\*\*\*\*\*

<sup>•</sup> ढोना सड़क रखरखाव के लिए श्रम का वेतन 2 श्रमिक\*300=600 प्रति दिन

Project: Sand Mining Project (Bhoj Son 39 Sand Ghat) At Riverbed of Son River at Mauja Andhary Mahaji (424) & Imadpur, Anchal- Sahar, District- Bhojpur, Bihar.

#### 1.0 PURPOSE OF THE REPORT

Environment Impact Assessment (EIA) is a process used to identify the environmental, social & economic impacts of a project prior to decision making. It aims to predict environmental impacts at an early stage of project planning & design, find ways & means to reduce adverse impacts. By using EIA, we can decide the suitable mitigation measures for implementation to maintain healthy working environment and contain pollution within permissible limits.

River plays an important role in the lives of the people. The river systems provide irrigation, potable water, transportation, electricity, and the livelihoods for a large number of people all over the country and to rural areas. Apart from this, river is also a good source of construction grade material as sand & gravel.

As transportation and construction infrastructure expanded since last few decades, the demand for construction grade sand also increased exponentially. The market demand of river sand is high throughout the nation. Sand is extracted directly from the river channel and it doesn't require processing other than size grading. But it is now well understood that continued and indiscriminate sand mining can cause serious environmental impacts, particularly if the river being mined is eroded.

Environmental Impact Assessment is one of the proven management tools for integrating environmental concerns in development process and for improved decision making as there is a need to harmonize the developmental activities with the environmental concerns into the larger interest of the society. The growing awareness, over the years, on environmental protection and sustainable development, has given further emphasis to the implementation of sound environmental management practices for mitigating adverse impacts from developmental activities. EIA study plays a vital role in sustainable development of a country. Recognizing its importance, the Ministry of Environment and Forest, Government of India had formulated policies and procedures governing the industrial and other developmental activities to prevent indiscriminate exploitation of natural resources and to promote integration of environmental concern in project development.

Project: Sand Mining Project (Bhoj Son 39 Sand Ghat) At Riverbed of Son River at Mauja Andhary Mahaji (424) & Imadpur, Anchal- Sahar, District- Bhojpur, Bihar.

Environmental Impact Assessment report is prepared to comply with the Terms of Reference (TOR) received from SEIAA, Bihar under EIA notification of the MoEF & CC dated 14<sup>th</sup> September, 2006 and its subsequent amendment there-off and also the EIA Guidance Manual for Mining of Minerals of MoEF&CC, Govt. of India, for seeking environmental clearance for mining of Sand in the applied mining lease area.

## 1.1 IDENTIFICATION OF PROJECT, PROJECT PROPONENT & CLUSTER APPROCH

The Proposed Sand Mining Project is located on Son River at Block No – 39 Sand Ghat at Mauja–Andhary Mahaji (424) & Imadpur, Anchal- Sahar, District- Bhojpur (Bihar) over an area of 24.5 hectares. **Proposed Production of the Area is 441000 cum/year or 749700 TPA.** 

The address of the proponent is given below:

Satyam Distributors

Pro – Yogendra Kumar

S/o- Late Bindeshwari Singh

Add - 114/35-A, Brahmsthan road,

Shekhpura Bagicha, B.B College, Patna – 800014

The proposed mining was a cluster of 02 mining lease area of Bhojpur Son 39 & Bhojpur Son 40 cluster over a combined area of 64.0 Ha is for river bed sand mining on Son River.

**Cluster Situation:** As per District Survey Report Bhojpur the Proposed sand Ghats of block 39 & block 40 are comes in cluster situation whose combined cluster area is 64.0 ha. All the lease area of homogeneous minerals is coming within 500 m radius from each other confirming a cluster situation. The Details of cluster is given below:

Sand Block Name	Area (Ha)	Production Excavation in Tonn (3 meter As per Approved DSR)	Applicant
Bhojpur Son 39	24.5	1190700	Satyam Distributors Pro – Yogendra Kumar
Bhojpur Son 40	39.5	1919700	-
Total	64.0	3110400	

Project: Sand Mining Project (Bhoj Son 39 Sand Ghat) At Riverbed of Son River at Mauja Andhary Mahaji (424) & Imadpur, Anchal- Sahar, District- Bhojpur, Bihar.

The proposed project is of River bed sand mining and falls under Category- "B1" as per EIA Notification 2006 and its subsequent amendments by Ministry of Environment Forests & Climate Change, GOI. Bhoj Son - 39 Sand Ghat fall in Mauja – Andhary Mahaji (424) & Imadpur, Tehsil – Sahar, Dist - Bhojpur, (Bihar). The details of the project are given below:

Name of Mine	Sand Mining Project (Bhoj Son 39 Sand Ghat) At	
	Riverbed of Son River at Mauza Andhary Mahaji (424)	
	& Imadpur, Anchal- Sahar, District- Bhojpur, Bihar	
Mineral	Sand	
Area (ha)	24.5 Ha	
Postal Address	Satyam Distributors	
	Pro – Yogendra Kumar	
	S/o- Late Bindeshwari Singh	
	Add – 114/35-A, Brahmsthan road,	
	Shekhpura Bagicha, B.B College,Patna – 800014	
Status of Mine	Fresh application for Environmental Clearance.	
Project Cost	16,25,35,000	
CER Cost	16,25,35,000*2% = Rs 3250700	

#### 1.2 BRIEF DESCRIPTION OF PROJECT

The proposed project is Open Cast Semi-Mechanized Mining of Sand with a proposed production of 441000 cum per annum or 749700 Tonnes per annum.

The project has been proposed by Satyam Distributors, Pro – Yogendra Kumar. The proposed project is over an area of 24.5 Ha at Khata no. – 7, 466 Khasra No.- 28, 29(Part), 1719, 1720 on Son River at Mauja – Andhary Mahaji (424) & Imadpur, Tehsil – Sahar, Dist - Bhojpur (Bihar). As per MoEF, New Delhi Gazette dated 14<sup>th</sup> September 2006 and amended thereof, the proposed mining project is categorized as **Category 'B-1'**. The estimated project cost for the proposed project is **Rs** 16,25,35,000/-(including auction cost)

Table: 1.1 Project cost break-up

S. No.	Description	Cost in Rs.
1	Labor Cost, Equipment, etc.	3,67,5,000/-
2	Miscellaneous	1,00,000
3	Auction Cost	15,87,60,000/-
TOTAL		16,25,35,000/-

Project: Sand Mining Project (Bhoj Son 39 Sand Ghat) At Riverbed of Son River at Mauja Andhary Mahaji (424) & Imadpur, Anchal- Sahar, District- Bhojpur, Bihar.

The proposed mining lease area falls in Survey of India Toposheet 72C/12

The mine lease co-ordinates and connectivity details are listed below:

Table: 1.2 Mine lease Pillar Co-ordinates(Block 39)

Pillar No	Latitude (N)	Longitude (E)
1.	25° 12' 29.106" N	84° 30' 12.702" E
2.	25° 12' 35.068" N	84° 30' 0.783" E
3.	25° 12' 48.833" N	84° 30' 28.362" E
4.	25° 12' 59.204" N	84° 30' 50.317 " E
5.	25° 12' 56.116" N	84° 30' 52.146" E
6.	25° 12' 47.839" N	84° 30' 50.490" E
7.	25° 12' 50.183" N	84° 30' 46.970" E

		<u>es/ZONE%20III.htm</u>		

The EIA-EMP report is prepared as per the TOR granted under the EIA Notification. In order to assess the impact on environment due to proposed mine, it is necessary to ascertain present status of environment prevailing at the project site and identification and assessment of impacts on the environment of the proposed operation.

#### **Project's importance to the country and the region**

Sands are ubiquitous material; available everywhere and is being used from the time immemorial for wide applications in our daily life; infrastructures, building construction, highways, roads, townships, multiplexes, foundations of buildings and industrial units etc. and is an integral part of development. Life without sand is unthinkable. Over the millennia, the weathering effect, the flow of water at high velocities in rivers and the pressure of water from the high mountainous reservoirs converted and pushed the hard ground underneath into sands, etc. which travelled as sediments with the flow. This sand got deposited along the river course wherever conditions were favorable. In the deep past this

Project: Sand Mining Project (Bhoj Son 39 Sand Ghat) At Riverbed of Son River at Mauja Andhary Mahaji (424) & Imadpur, Anchal- Sahar, District- Bhojpur, Bihar.

settled sand was not extracted in a quantity in which it deposited; since due to less population the requirements was not enough. As a result of continuous deposit of sand, the rivers went on changing their course, widening by itself, eroding the fields and expanding, resulting in flooding, inundation and breaking their banks, causing devastation of property and loss of life. There has been a severe impact on every aspect of the environment. The rivers thus, needed channelization and therefore, extraction of these minor minerals through mining was expedient. The haphazard mining of sands being practiced now for long, through unregulated, uncontrolled and illegal way added almost an irreversible damage to the environment, which became a cause of serious concern to everyone. Though sands are very important mineral source for development, its mining through scientific methods has also become equally imperative.

It is for this purpose that 'mining plan' is being drawn so that all its aspects are taken care of justifiably, according to law, protecting the environment, removing all adverse impacts and creating a direct and indirect employment opportunities, improving socio-economic conditions of the local inhabitants and all-around status of life, achieving thereby a sustainable development.

Besides the above, the process of mining of minor minerals (Sand) is a constant source of revenue generation to the State Government through Royalty.

#### 1.4 SCOPE OF THE STUDY

The project proposal was submitted to State Level Environment Impact Assessment Authority-Bihar for its appraisal. Based on which, presentation was held for Terms of Reference (TOR). Based on the data provided and presentation made, the SEIAA-Bihar has issued the Terms of dated 11.01.2023 attached as **Annexure-1** 

Followings are the point wise compliance of the ToR provided by the SEIAA Bihar.

Table: 1.5 Point wise compliance for TOR (Bhoj Son 39)

			Reference
S. No	TOR	Compliance	in the
			Report

1	Year-wise production details since 1994 should be given, clearly stating the highest production achieved in any one year prior to 1994. It may also be categorically informed whether there had been any increase in production after the EIA Notification 1994 came into force, w.r.t. the highest production achieved prior to 1994.	This is fresh LOI, Mine is yet to be operate. It will operate only after getting environmental clearance.	
2	A copy of the document in support of the fact that the Proponent is the rightful lessee of the mine should be given.	State Govt. has given consent for mining vide letter no. 4395 dated 28-10-2022 in favor of Satyam Distributors, Pro – Yogendra Kumar	Annexure II, LOI
3	All documents including approved mine plan, EIA and public hearing should be compatible with one another in terms of the mine lease area, production levels, waste generation and its management and mining technology and should be in the name of the lessee.	mine plan and EIA report submitted are compatible with one another w.r.t. to following information:  Mining Lease Area- 24.5 Hectare.  Lessee: Satyam Distributors Pro – Yogendra Kumar Proposed Production-441000 cum per annum or 749700 TPA.  Waste generation-  No waste will be generated.  Mining Method-Open Cast semi-mechanized/OTFM Method	Annexure - III  Mine plan  All details has been complied in chapter-2

4	All corner coordinates of the mine lease area, superimposed on a High Resolution Imagery toposheet, topographic sheet, geomorphology and geology of the area should be provided. Such an Imagery of the proposed area should clearly show the land use and other ecological features of the study area (core and buffer zone).	All Corner Coordinates of mining lease area superimposed on High Resolution Imagery has been incorporated in EIA/EMP Report.	Refer Chapter 2 Fig: 2.1, Corner Coordinates map
5	Information should be provided in Survey of India Toposheet in 1:50,000 scale indicating geological map of the area, geomorphology of land forms of the area, existing minerals and mining history of the area, important water bodies, streams and rivers and soil characteristics.	The land use map showing salient features of the area is given in the report.  The geological map of the mine lease area is also given in the report showing geomorphology	Land-use of the study area Figure 3.1.
6	Details about the land proposed for mining activities should be given with information as to whether mining conforms to the land use policy of the State; land diversion for mining should have approval from State land use board or the concerned authority.	The Lease area is dry part of River bed.  The mining process will be done by land use policy of the State & no land diversion has been proposed.	Chapter II & III
7	It should be clearly stated whether the proponent Company has a well laid down Environment Policy approved by its Board of Directors? If so, it may be spelt out in the EIA Report with description of the prescribed operating processes /procedures to bring into focus any infringement / deviation / violation	Yes, the proponent Company has a well laid down Environment Policy. The hierarchical system or administrative order of the company has been given in	Chapter VIII Section 8.1 Corporate

	of the environmental or forest norms / conditions?.	the EIA report.	Environme

# 2.0 TYPE OF PROJECT

The project is proposed for the excavation of sand from the bed of river Son. The proposed project is Open cast Semi-mechanized/OTFM mining project.

### 2.1 NEED FOR THE PROJECT

The project site lies on Son River. The river get recharged by the rain water and carries sediment consisting of sand etc during monsoon season, generally.

Sand is used widely in the construction industry. It is usually mixed with cement and other ingredients to create mortar for building. It is also used in agriculture, as sandy soils are ideal for crops such as watermelons, peaches and peanuts. Sand is also used in Aquaria as it makes a low cost aquarium base material. This project will also provide employment to local people helping them earn livelihood.

# 2.2 LOCATION DETAILS

The project has been proposed by Satyam Distributors, Pro – Yogendra Kumar. The proposed project is over an area of 24.5 Ha at Khata no. – 7, 466 Khasra No.- 28, 29(Part), 1719, 1720 on Son River at Mauja – Andhary Mahaji (424) & Imadpur, Tehsil – Sahar, Dist - Bhojpur (Bihar).

Cluster Situation: As per District Survey Report Bhojpur the Proposed sand Ghats of block 39 & block 40 are comes in cluster situation whose combined cluster area is 64.0 ha. All the lease area of homogeneous minerals is coming within 500 m radius from each other confirming a cluster situation.

The Details of cluster is given below:

Sand Block Name	Area (Ha)	Production (TPA) As per Approved DSR)	Applicant
Bhojpur Son 39	24.5	1190700	Satyam Distributors Pro – Yogendra Kumar
Bhojpur Son 40	39.5	1919700	-
Total	64.0	3110400	

The lease area falls in Survey of India Toposheet **72C/12**. The lease co-ordinates and connectivity details are listed below:

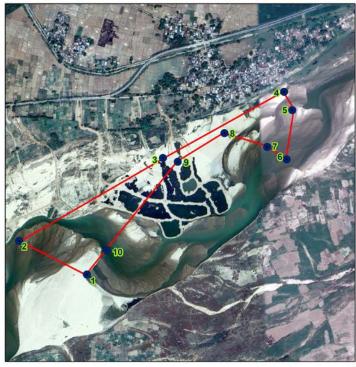

**Table 2.1, Mine Lease Co-ordinates** 

Sl. No	Coordinate	River Name
1	25° 12' 29.106" N 84° 30' 12.702" E	
2	25° 12' 35.068" N 84° 30' 0.783" E	
3	25° 12' 48.833" N 84° 30' 28.362" E	
4	25° 12' 59.204" N 84° 30' 50.317 " E	
5	25° 12' 56.116" N 84° 30' 52.146" E	Son
6	25° 12' 47.839" N 84° 30' 50.490" E	3011
7	25° 12' 50.183" N 84° 30' 46.970" E	
8	25° 12' 52.511" N 84° 30' 39.040" E	
9	25° 12' 47.889" N 84° 30' 30.250" E	
10	25° 12' 30.299" N 84° 30' 13.817" E	

The mine site is well connected via an approach road of approx. 600 Metres to Metalled Road (Chansi-Nasriganj Road). SH-81 Approx. 1 KM towards N direction. Piro Railway Station, approx. 15 km towards NW direction. JPN International Airport Patna, approx. 74 km towards NE direction

FIGURE 2.1:- PILLAR COORDINATE MAP

# 2.2.1 Lease / Block Area

The proposed project is Open Cast Semi-Mechanized Mining of Sand with a proposed production of 441000 cum per annum or 749700 Tonnes per annum.

The project has been proposed by Satyam Distributors, Pro – Yogendra Kumar. The proposed project is over an area of 24.5 Ha at Khata no. – 7, 466 Khasra No.- 28, 29(Part), 1719, 1720 on Son River at Mauja – Andhary Mahaji (424) & Imadpur, Tehsil – Sahar, Dist - Bhojpur (Bihar). As per MoEF, New Delhi Gazette dated 14<sup>th</sup> September 2006 and amended thereof, the proposed mining project is categorized as **Category 'B-1'**. The estimated project cost for the proposed project is **Rs 16,25,35,000/-**(including auction cost)

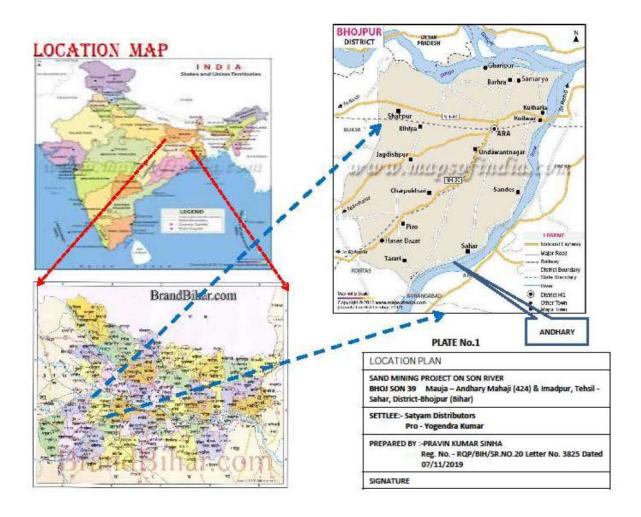

FIGURE 2.2:- LOCATION MAP OF THE PROJECT SITE

# 2.3 TOPOGRAPHY & GEOLOGY

# 2.3.1 Topography

Bhojpur district is situated in the South Bihar alluvial plains. Bhojpur is an administrative district in the state of Bihar in India. The district headquarters are located at Arrah also known as Ara. The district occupies an area of 2,474 km² and has a population of 1,792,771 (as of 2001). Bhojpur district occupies an area of 2,395 square kilometres (925 sq mi), It is located at a longitude of 83° 45' to 84° 45' East and the latitude is 25° 10' to 25° 40' North and is situated at a height of 193 meters above sea level. The sand deposits of Bhojpur district of Bihar broadly form part and parcel of the flood plains of Ganga River as whole formed since geological ages.

11-29

The State of Bihar is transecting by a no. of rivers. The individual river basins and their catchment areas is shown in Fig. no. 1 below. The various sand mining lease areas (also referred to as sand Ghats) lie in the river bed of river Son which is a major tributary of river Ganga. They are formed in the Quaternary period of central Bihar Plains- the OAG (Older Alluvium Group) forming the highest terrace, in the Son-Ganga alluvial tract, and NAG (Newer Alluvium Group) forming younger terraces, as Older Flood Plains, are exposed all along the Alluvial Upland.

.

# 2.3.2 Geomorphology

Bhojpur district is mainly covered with alluvium (Plate IV) and hard rocks of Vindhyan Supergroup are situated at the southwestern side beyond the district boundary. The north and northeast parts of the district are covered with Newer Alluvium and younger flood plains (diaraformations) while the central and southern parts are covered with Older Alluvium and older flood plains. The entire area of the district has a general slope towards the north and northeast. The general elevation with respect to mean sea level is 50-90 m. The gradient is 0.6 m/km approximately from south to north.

The north and northeast area of the district is pitted with oxbow lakes, meander scars with point bars left over by old Ganga channels. The local small rivers follow little yazoo pattern before entering the meander belt of river Ganga and flow few kilometers parallel to the southern levee of river Ganga.

### 2.3.3 REGIONAL GEOLOGY

Regionally the area constitutes a part of the Ganga River Basin.

The north-eastern part of Haryana is predominantly characterized by sedimentary lithology in the Sub-Himalayan zone comprising Subathus, Dagshais, Kasaulis and Siwaliks. A general Regional stratigraphic sequence in the area is given below:

Showing the Geological Succession and their geographic distribution

Table 2.2 Showing the Geological Succession and their Occurrences distribution

Age	Geology	Occurrences
Quaternary	Alluvial Deposits	North Bihar Plain
	(Sand, Clay, Silt,	& Central Bihar Plain
	Fragments)	
Tertiary	Sand Stones & Clay Stones	North Champaran Hills

	metamorphosed sedimentary	
	and igneous rocks	

Source: Mining Plan

### 2.3.4 LOCAL GEOLOGY OF THE AREA

The sand exposed in the River bed of Son and surrounding areas is the product of the deposition of the sediments brought and deposited in the flood plains of River Ganga. These sediments are of recent geological formation. The litho-units exposed within the river and surrounding areas have formed as water borne sediments brought by flood water during rainy season every year and deposited in riverbed.

The litho units encountered in the riverbed and surrounding areas belongs to the Shivalik super groups. The size of the sediments towards the source i.e. host rock is course and at the tale end of the river the grain size is reduced to smaller sizes resulted in the formation of clay beds. The following sequences have been observed in the area, i.e. Top soil/ Alluvium followed by sand deposition.

Sand and silt are deposited in the middle of the river whereas fine sand and soil are deposited at the fringe of the riverbanks.

Soil/ alluvium varying in thickness from 0.20m to 0.60m m constitute the top horizons in the area suitable for agriculture. River Ganga meanders through the area exposing the alluvium and soil at the banks. Sand is found in the river bed upto a depth of more than 3.0 m. The major part of bed remains dry as water flows in a single stream during the nonmonsoon seasons. Only during rainy seasons the entire flood plain has water, when there will be no mining done.

Source: Mining Plan

# **2.3.5 CLIMATE**

Warm and humid climate prevails in the district. The temperature touches 39°C on an average during the months of April and May, and that of the minimum 6.3°C during the month of January.. The monsoon starts mostly from the mid of June and continues up to the end of the September. From seventy years (1901- 1970) annual rainfall data it has been observed that the normal rainfall of the district is at 1080 mm/yr. The annual rainfall of the district varies within 1025.2 to 1106.2 mm. About 85.46 % of the total annual rainfall is received during monsoon period and the rest (only 14.54 % approximately) comes in the months of November to May of non monsoon period.

**Source:** https://cgwb.gov.in/District Profile/Bihar/Bhojpur.pdf

### 2.4 GEOLOGICAL RESERVE

The geological reserves have been each stretches & for individual blocks. Geological reserves have been completed through cross sectional area method. The area of each section line is multiplied by strike influence to get the volume.

Proved Mineral Reserves (111): All quantities of sand occurring up to depth of 3m from surface has been considered as proved reserves.

**Table-2.3:- Proved Mineral Reserves** 

Classification	Code	Quantity of Sand
A) Mineral Reserves		Cum
1) Proved Mineral Reserves	111	735000
Total		735000

Total Geological Reserve = 735000 cum or 1249500 tonnes

Source: Mining Plan

#### 2.4.1 Mineable Reserves:

Mineable reserves have been computed up to 3m depth from surface. Benches having height 1.5m & width 6.0m drawn from the ultimate pit limit. Area of each benches have been calculated multiplied by strike influence to get the volume. The volume multiplied by bulk density (1.7 g/cm3) to get the tonnage.

The minerals excavated from the river bed will be replenished gradually during the monsoon season every year. And the area pertaining to paleochannels of the river will be leveled & restored back.

.Table-2.4:- Minable Reserves

Bench Level (mRL)	Length (m)	Width (m)	Depth (m)	Volume (cum)	Tonnes
73.2- 71.7	1455	150	1.5	327375	556537
71.7 – 70.2	1445	140	1.5	303450	515865
Total				630825	1072402

**Total Mineable Reserve = 630825 CUM or 1072402 Tonnes** 

**Table No-.2.5 Classification Mineral Reserves:** 

Sand Ghat	Area (Hect)	Geological Reserves (m3)	Mineable Reserves (m3)	Annual Mineable Permitted Reserve As per LoI (m3)
Bhoj Son 39	24.5	735000	630825	441000

<sup>\*</sup>Bulk density is 1.7 g/cm3

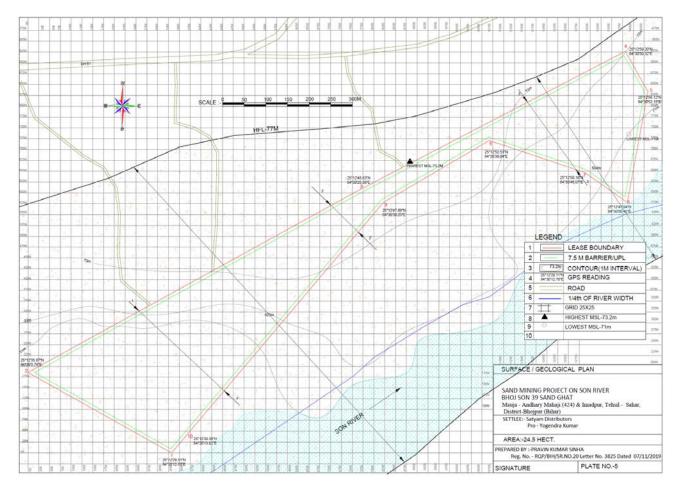

FIGURE 2.3:- SURFACE CUM GEOLOGICAL PLAN OF PROJECT

# 2.4.2 Type of Mining

Mining will be done as per the guidelines of Bihar Mineral (Concession Prevention of illegal Mining Transportation & Storage) Rules, 2019.

This is an open-cast mining project. The operation will be semi-mechanized/OTFM with use of excavators/JCBs truck /tractors combination or Manually etc. The sand will be collected in its existing form.

Sand Mining will be carried out only upto a depth of 3 m bgl or above ground water level (whichever is less), for river bed block.

No drilling /blasting are required as the material is loose in nature.

Proper benching of 1.5 m height and 6m width will be maintained for mining blocks as per guideline M.M.R-2019, under rule 115(1).

Mining will be done only during the day time and completely stopped during the monsoon season.

# 2.4.3 Year Wise Production Schedule:

The bench wise annual exploitation of sand from Bhoj Son 39 is given below:-

**Table 2.6 Year wise Production Detail** 

YEAR	Over burden (cum)	ROM sand (cum)	Saleable Sand (cum)
1 <sup>st</sup> Year	-	441000	441000
2 <sup>nd</sup> Year	-	441000	441000
3 <sup>rd</sup> Year	-	441000	441000
4 <sup>th</sup> Year	-	441000	441000
5 <sup>th</sup> Year	-	441000	441000

The annual extractable RBM comes to **441000 CUM or 749700 Tonnes.** It will be replenished after rainy season every year.

**Table 2.7 Classification Mineral Reserves:** 

Balu Ghat	Area (Ha)	Geological Reserves (m3)	Mineable Reserves (m3)	Annual Production target (m3)	Annual Production target (Tonnes)
Bhoj Son 39	24.5	735000	630825	441000	749700

The annual extractable RBM comes to 441000 CUM or 749700 Tonnes. It will be replenished after rainy season every year.

Source: Mining Plan

# 2.5 Conceptual Mining Plan

Mine Applied Area will be worked for Bhoj Son 39 Sand Ghat. However, as the digging depth will be restricted to 3.0 m only. This will be further replenished during rainy season. Sand Ghat will be worked systematically as the width is limited while length is much more. As the lease period is only 5 (Five) years, some of the area will be left un-worked at the end of lease period.

- (i) Final Slope Angle to Be Adopted: Height of the bench is limited to 1.5 m while width of individual bench shall be kept 6.0m. River bank side will be protected by working in dry part of the river and by leaving safety distance of the width of the river of 5 meter. Bank side natural slope will not be disturbed. This will prevent collapse of bank and erosion. However, the height of the bank with respect to river bed is varying from 3-4 meters.
- (ii) During plan period workings will be carried out in the Sand Ghat at a time of the Applied Area simultaneously. Scattered workings will ensure safety, remove congestion of vehicles and will have better control and management.
- (iii)Ultimate Capacity of Dumps: There will be no OB removal / during the plan period. Therefore no proposal has been envisaged for its separate dumping. No outside material will be filled up in the extracted zone.

### 2.6.0 Anticipated life of mine

There is as such no specific life of the mine as the area under reference is inactive part of river bed of the river and its pale channels and whatever quantity of minor minerals are extracted from the Applied Area during five year; almost equal to extracted quantity of the same are replenished every year and the river bed area will be leveled & restored back. However, as lease has been granted for 5 years, mining will be done for the allotted time.

# 2.6.1 Waste -disposal arrangement

No top soil is present in the mining area as it is riverbed. Small amount of domestic waste will be generated by the workers at the site, which will be disposed off through proper municipal way. No other waste generation is expected. No waste will be thrown into the streams or left on the banks. Separate bins will be kept within the lease area for domestic wastes.

### 2.7 GENERAL FEATURES

# 2.7.1 Land-use pattern

The mine lease area is flat river bed and river banks. There is no forest land or agriculture land in the mine lease area. The entire mining lease lies within River.

# 2.7.2 Surface drainage pattern

The mine site lies on the dry bed of Son River so there will be no impact on surface water.

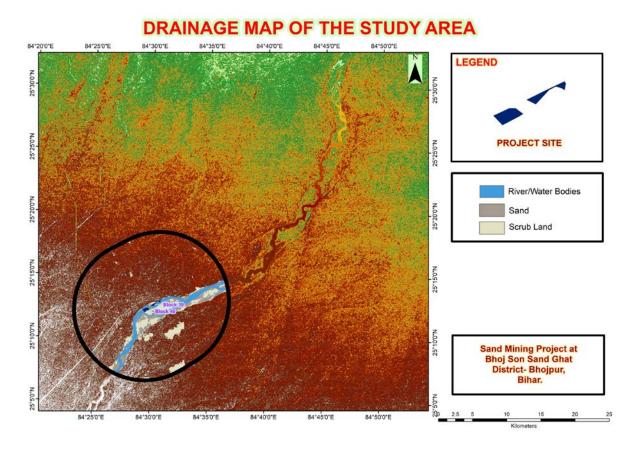

FIG-2.4, DRAINAGE MAP

# 2.7.3 Man power requirement

The manpower requirement for the proposed project will be around 44 who will be utilized for excavation & loading of minerals into trucks or tractor-trolleys. Break-up of Man-power requirement is given in below **Table 2.8.** 

**Table 2.8, Manpower Requirement** 

S. No.	Category	Numbers
1.	Administration	1
2.	Supervisor	4
3.	Skilled	9

4.	Un-skilled	30
	TOTAL	44

# 2.7.4 Water supply

Water requirement for the proposed project will be provided for the workers for drinking & domestic purpose. Water will also be provided for dust suppression. Fresh water will be only used for drinking purpose. The break up for water requirement is given below:

Activity	Calculation	Round off Figure
		in KLD
Drinking	@ 10 lpcd per labor	0.44
	10*44/1000= 0.44 KLD	0.44
Dust Suppression	Total approach road to be	
	water sprinkled = 350 m	2.1
	350 m*6m*0.5 *2 times/1000= 3.6 KLD	
Plantation	245 plant (during plan period)	1.22
	@ 5 L/per plant= 245*5lts= 1225/1000= 1.22	
	KLD	
	3.76	

The water will be supplied from available sources from nearby village.

### 2.7.5 Site services

The following facilities/amenities will be extended by the mine management under site services:

- A temporary rest shelter will be provided for the workers near to the site for rest.
- Provisions will also be made for following in the rest shelter:
- ❖ First aid box will be made available at the site. In emergency worker.
- Sanitation facility i.e. septic tank or community toilet facility will be provided for the workers.
- Mask and gloves distribution to the workers.

# 2.7.6 Extent of mechanization

The operation will be open cast semi- mechanized/OTFM with use of excavators/JCBs truck /tractors combination or Manually etc. The sand will be collected in its existing form.

Table 2.9, List of Equipment to be used

S.No	Name of Machinery	Capacity	Fuel	No of
	<i>j</i>	o ap a say	Consumption	Machinery
1	JCB	$1.00 \text{ m}^3$	10 Ltr/hr	2
2	Excavator	$2.0 \text{ m}^3$	16 Ltr/hr	7
3	Trucks	12 tonnes	4 Ltr/hr	200
4	Tractors	04 Tonnes	2 Ltr/hr	150
5	Water Tanker	4000 liter	4 Ltr/hr	2
6	Light vehicles	As per requirement	4 Ltr/hr	1

# 2.7.7 Statutory requirements

It is accepted that effective resource management cannot be done in isolation. The proponent therefore vigorously pursues approaches towards coordination and integration where possible, so as to lead to coordinated regulatory systems.

Various acts dealing with matters relating to the conservation and protection of the environment and which a holder of a mining authorization must also take cognizance of include inter alia, the following:

- Bihar Minor Mineral Concession Rule, 2014 amended till date.
- The Mines Act, 1952.
- The Mines and Mineral (Development and Regulation) Act, 1957.
- Mines Rules, 1955.
- Mineral Concession Rules, 1960.
- Mineral Conservation and Development Rules, 1988.
- The Water (Prevention and Control of Pollution) Act, 1974.
- The Air (Prevention and Control of Pollution) Act, 1981.
- The Environment (Protection) Act, 1986.
- The Forest (Conservation) Act, 1980.
- The Wildlife (Protection) Act, 1972.

\*\*\*\*\*

### 3.0 General

The main objective of describing the environment which may be potentially affected, are i) to assess present environmental quality and the environmental impacts and ii) to identify environmentally significant factors that could preclude mine development. Mining activities affect the existing status of environment at site. In order to maintain the existing environmental status at mining site it is essential study existing environmental status and assess the impact of upcoming project on various environmental components. This chapter gives idea of description of environment status of the study area and this will be helpful for assessment of impact on the environment due to proposed mining activities. Baseline environmental status in and around proposed mining lease area describe the existing conditions of air, noise, water, soil, biological and socio-economic environment. The proposed project as a center, a radial distance of 10 km is considered as study area for baseline data collection and environmental monitoring. The data was collected for various environmental attributes so as to compute the impacts that are likely to arise due to proposed development activity.

# 3.0.1 Study area & study period

The proposed project as a center, a radial distance of 10 km is considered as study area for baseline data collection and environmental monitoring. The baseline environment quality was carried out over a radial distance of 10 km around the mining lease area during the months of Dec 2022, Jan-Feb 2023.

#### 3.0.2 Methodology

Base line attributes like ambient air, water, meteorology, noise, Soil, Ecology and Biodiversity & Socio Economy condition were collected as per approved term of reference. Secondary data was also collected from various government department as well as local people. Methodology adopted in this study is as follows.

- ✓ By setting up meteorological station near project site
- ✓ Collection of site specific meteorological data at the mine site.
- ✓ Installation of respiratory dust samplers (for PM<sub>10</sub>, PM<sub>2.5</sub>) at different location in the study area for the collection of primary air pollutant and analyze the existing air conditions.
- ✓ Carrying out a detailed biological study for the Core and Buffer Zone

Page | III 40

- ✓ Soil sample were collected from various location in the study area to analyze physical and chemical characteristics for assessment of impact on soil.
- ✓ Surface and Ground water samples were also collected from the various locations in the study area for analysing the existing water quality in the study area.
- ✓ Noise measurement has been done in core zone as well as buffer zone to analyze the existing situation in the study area.
- ✓ Literature review that includes identification of relevant data and articles from various publications, various government agencies and other sources for socio-economy, demography has been done with primary data collection in 10 km of the study area.
- ✓ Existing pollution load has been also identified in the buffer zone due to similar activities.
- ✓ Accordingly, field studies were carried out during the study period (Dec 2022, Jan-Feb 2023) to establish the existing baseline conditions.

# 3.1 Land Environment of the Study area

#### Land use

Land use involves he management and modification of natural environment or wilderness in to built environment such as settlements and semi-natural habitats such as arable fields, pastures, and managed woods. It also has been defined as "the total of arrangements, activities and inputs that people undertake in a certain land cover type.

#### Land cover

Land cover is the physical material at the surface of the earth. Land covers include grass, asphalt, trees, bare ground, water, etc. Earth cover is the expression used by ecologist Frederick Edward Clements that has its closest modern equivalent being vegetation. The expression continues to be used by the Bureau of Land Management.

To assess the land use pattern surrounding the 10 km radius of the site, a detailed study was carried out. The land use pattern study reveals that the 10 km environs is predominantly agricultural land. The land use details are given in **Table- 3.1** and shown in **Figure-3.1**.

Page | III 41

Area (Ha) Landuse Type Area (%) Scrub Land 2265.89 5.96 Forest 1.11 421.17 River/Water Bodies 1487.28 3.91 Settlement 3705.87 9.75 Sand 3.48 1322.06 Agriculture 75.79 28812.13 **AREA** 38014.40 100.00

### 3.2 Water Environment

Water quality assessment is one of the essential components of EIA study. Such assessment helps in evaluating the existing health of water body and suggesting appropriate mitigation measures to minimize the potential impact from development projects. Water quality of

Page | III 42

ground water has been studied in order to assess proposed water-uses in construction, drinking, cooling and horticulture purpose.

The water quality at the site and other locations within the 10 km impact zone was monitored during Dec 2022 to February 2023. The water sampling locations marked within the study are presented in **Table 3.2** and **Figure 3.2** and the result of the monitoring and analysis are presented in the **Table 3.3** showing Water Quality Monitoring Locations marked within the Study Area.

## **Observation:**

Analysis of results of ground water reveals the following: -

- pH varies from 7.14 at to 8.24.
- Total hardness varies from 321 mg/l to 405 mg/l.
- Total dissolved solids vary from 439 mg/l to 555 mg/l.

  The ground water from all sources remains suitable for drinking purposes as all the constituents are within the limits prescribed by drinking water standards promulgated by Indian Standards IS: 10500.

## 3.2 (b) SURFACE WATER

Three surface water samples were collected from the study area. The location of surface water samples is given in Table 3.3 (iii). The physio-chemical analysis of the these samples are given in the Table 3.3 (iv)

**Table 3.4: Surface water sampling locations**

## 3.2.1 Sampling frequency

Parameters for analysis of water quality were selected based on the utility of the particular source of water as per CPCB guidance. Surface water quality was monitored for parameters as per Methods of Monitoring & Analysis published by CPCB and it was rated according to the CPCB Water Quality Criteria against A, B, C, D & E class of water. Water samples were collected as Grab water sample from sampling location for complete physico-chemical and bacteriological tests respectively. The samples were analyzed as per standard procedure / method given in IS: 10500.

The surface water quality is compared with CPCB water quality criteria mentioned in **Table 3.4** below:

Table 3.6, Water quality criteria as per Central Pollution Control Board

Designated-Best- Cla	s of Criteria
----------------------	---------------

Use	water	
Drinking Water Source	A	Total Coliforms Organism MPN/100ml shall be 50
without conventional		or less
treatment but after		pH between 6.5 and 8.5
disinfection		Dissolved Oxygen 6mg/l or more Biochemical
		Oxygen Demand 5 days 20°C 2mg/l or less
Outdoor bathing	В	Total Coliforms Organism MPN/100ml shall be 500
(Organized)		or less;
		pH between 6.5 and 8.5;
		Dissolved Oxygen 5mg/l or more Biochemical
		Oxygen Demand 5 days 20°C 3mg/l or less
Drinking water source	С	Total Coliforms Organism MPN/100ml shall be
after conventional		5000 or less;
treatment and		pH between 6 to 9;
disinfection		Dissolved Oxygen 4mg/l or more Biochemical
		Oxygen Demand 5 days 20°C 3mg/l or less
Propagation of Wild	D	pH between 6.5 to 8.5
life and Fisheries		Dissolved Oxygen 4mg/l or more Free Ammonia
		(as N) 1.2 mg/l or less

Waste disposal		Max.2250
		Sodium absorption Ratio Max. 26
		Boron Max. 2mg/l
	Below-E	Not Meeting A, B, C, D & E Criteria

As per the standard practice, one sample from each station was taken in January. Sampling was done by standard sampling technique as per the Standard Methods. Necessary precautions were taken for preservation of samples.

#### 3.2.2 Result & Conclusion:

## **Surface water Observation:**

- The analysis results indicate that the pH ranges between 8.25 and 8.45.
- Dissolved Oxygen (DO) was observed in the range of 6.5 to 7.5 mg/l against the

minimum requirement of 4 mg/l.

- BOD values were observed to be in the range of 3 to 5 mg/l.
- Total Coliform examination of surface water samples revealed the presence of total coliform in range of 1900 MPN/100 ml to 400 MPN/100 ml.

Based on the results it is evident that most of the parameters of the samples comply with 'Category 'C' standards of CPCB (Table 3.5) are indicating their suitability for only Drinking water source after conventional treatment and disinfections.

## 3.3 Air Environment

Meteorology is the key to understand the air quality. The essential relationship between meteorology and atmospheric dispersion involves the wind in the broadest sense. Wind fluctuations over a very wide range of time, accomplish dispersion and strongly influence other processes associated with them.

A meteorological station was set up at the proposed mine premises. Meteorological data was generated during the winter season and shown in **Table-3.5** 

The following parameters were recorded at hourly intervals continuously during monitoring period, except rainfall which was recorded on daily basis.

- Wind speed
- Wind Direction
- Air Temperature

Table-3.7, Summarized project site meteorological data for Winter Season

	Temperature °C		Wind Speed (Km/Hr)		
Month	Min	Max	Min	Max	
DEC 2022	10	20	1	24	
JANUARY 2023	05	19	1	26	
FEBRUARY 2023	12	22	2	32	

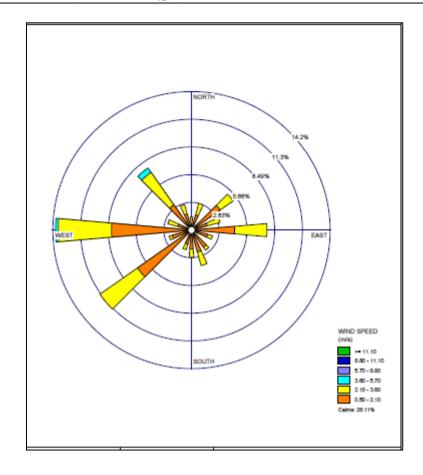

Figure 3.3: Wind Rose Diagram (at site)

## 3.3.1 Secondary Data Collected from IMD

Secondary data from IMD- Patna been collected for temperature, relative humidity, rainfall, wind speed and direction. The data at IMD is usually measured twice a day viz., at 0830 and 1730 hr.

The meteorological data is collected from the IMD- Patna is about 40 km from project site, which is the nearest operating IMD station to the project site. The data collected from IMD includes wind speed, wind direction, temperature, relative humidity and rainfall for the year 1981-2010. The monthly maximum, minimum and average values are collected for all the parameters except wind speed and direction. The collected data is tabulated in **Table-3.6** 

When the data generated at project site is compared with the data recorded at IMD, it is observed that the data generated at the site is broadly in comparison with regional meteorology, except for minor variations as described above.

## 3.3.2 Comparison of primary and secondary data

The India Meteorological Department (IMD) records the data twice a day viz. 0830 hr and 1730 hr while the site-specific data has been recorded at an hourly interval. On comparison of site specific data generated for study period vis-à-vis the IMD data, slight variations were observed. The following observations are brought out:

When the data generated at project site is compared with the data recorded at IMD, it is observed that the data generated at the site is broadly in comparison with regional meteorology, except for minor variations as described above such as predominant wind direction is NW at IMD while at project site predominant wind direction is West.

#### 3.3.3 Ambient Air Quality

The ambient air quality was monitored in the impact area as per MoEF& CC guidelines. The study area represents entirely rural environment. The prime objective of the baseline air quality study was to assess the ambient air quality of the mining lease area.

#### 3.3.4 Selection criteria for monitoring location

The baseline status of the ambient air quality has been assessed through a scientifically designed ambient air quality network. The design of monitoring network in the air quality surveillance programme has been based on the following consideration.

- Meteorological parameters including wind direction
- Topography of the study area
- Representative of regional background air quality for obtaining baseline status
- Representative of likely impact areas.

Ambient Air Quality Monitoring (AAQM) stations were set up at 10 locations with due consideration to the above mentioned points. AAQM locations were selected in downwind, upwind as well as crosswind direction of the proposed mining lease area covering core and buffer zones. The details of the monitoring stations are given in **Figure 3.4** and shown in **Table-3.7** 

Ambient air quality monitoring was carried out twice a week with a frequency of 24 hours for three months during the study period. The common air pollutant namely Particulate Matter-10 (PM<sub>10</sub>) & PM<sub>2.5</sub>, Sulphur-dioxide (SO<sub>2</sub>) and Oxides of Nitrogen (NO<sub>2</sub>) has been measured through a planned field monitoring.

The baseline values of the air pollutants of concern are presented in Tables below statistical

parameters like minimum, maximum, average and 98<sup>th</sup> percentiles have been computed from the observed field data for all sampling stations and are given **Table-3.8**, **Table-3.9**, **Table-3.10& Table 3.11**. These are compared with the standards prescribed by Central PollutionControl Board (CPCB) for industrial, residential and rural zone.

#### 3.3.4.1 Baseline Scenario

#### Particulate Matter (PM2.5)

Fine particles include all types of combustion, including motor vehicles, power plants, residential wood burning, forest fires, agricultural burning, and some industrial processes. In general some of the important sources of particulate matter are mines. The following sources of particulate matter in the study area are identified:

- Emission due to vehicular movement
- Dust generation from ground or other mining operations

PM2.5 recorded within the study area was in the range of 33.3  $\mu$ g/m³ to 60.62  $\mu$ g/m³. Table 3.3 were compared with the National Ambient Air Quality Standards (NAAQS) and found that all sampling stations recorded in the study area are within the applicable limits i.e.,  $60\mu$ g/m³ for PM<sub>2.5</sub> for industrial, residential, rural and other areas.

## **Suspended Particulate Matter (PM10)**

Suspended particulate matter in general terms is the particulate matter in suspension in ambient air. It includes dust, smoke etc. In general some of the important sources of suspended particulate matter are mines. The following sources of suspended particulate matter in the study area are identified:

- Emission due to vehicular movement
- Dust generation from ground or other mining operations

The minimum and maximum level of PM10 recorded within the study area was in the range of  $58.63~\mu g/m^3$  to  $96.47~\mu g/m^3$ . The 24 hourly average values of PM10 were compared with the National Ambient Air Quality Standards (NAAQS) and found that all sampling stations recorded in the study area are within the applicable limits i.e.,  $100~\mu g/m^3$  for PM10 in industrial, residential, rural and other areas.

## **Sulphur Dioxide (SO2)**

Sulphur dioxide gas is an inorganic gaseous pollutant. Sulphur dioxide emissions are expected to be emitted wherever combustion of any fuel containing Sulphur takes place. The Sulphur in the fuel will combine with oxygen to form Sulphur dioxide. The following sources of Sulphur dioxide in the study area are identified:

• Emissions from domestic/consumption of fuel (coal, diesel, etc)

Sulphur dioxide in atmosphere is significant because of its toxicity; Sulphur dioxide is capable of causing illness and lung injury. Further it can combine with water in the air to form toxic acid aerosols that can corrode metal surfaces, fabrics and the leaves of plants. Sulphur dioxide is an irritant to the eyes and respiratory system. Excessive exposure to Sulphur dioxide causes breathing related diseases as it affects the lungs.

The minimum and maximum concentration of  $SO_2$  recorded within the study area was  $4.52 \, \mu g/m^3$  to  $11.3 \, \mu g/m^3$ .

The 24 hourly average values of  $SO_2$  were compared with the National Ambient Air Quality Standards (NAAQS) and it was found that all sampling stations recorded values are below the applicable limits 80  $\mu$ g/m<sup>3</sup> for Residential, Rural and other areas.

## Oxides of Nitrogen (NO2)

The important sources of oxides of Nitrogen are from utilities and auto exhaust due to vehicular movement in mine lease area. The following sources of oxides of nitrogen in the

study area are identified.

Emissions from vehicular movements in the study area.

Oxides of Nitrogen in the presence of sunlight will undergo reactions with a number of organic compounds to produce all the effects associated with photochemical smog. NO2 has inherent ability to produce deleterious effects by themselves like toxicity. It causes asphyxiation when its concentration is great enough to reduce the normal oxygen supply from the air. The minimum and maximum level of NO2 recorded within the study area was in the range of was  $5.4 \, \mu g/m^3$ to  $20.6 \, \mu g/m^3$ .

The 24 hourly average values of  $NO_2$  were compared with the National Ambient Air Quality Standards (NAAQS) and it was found that all sampling stations recorded values are below the applicable limits 80  $\mu$ g/m<sup>3</sup> for Residential, Rural and other areas.

## 3.4 SOIL ENVIRONMENT

Soil may be defined as a thin layer of earth's crust, a medium for the growth of plants. The soil characteristics include both physical and chemical properties. The soil survey and soil sample were carried out / collected to assess the soil characteristics of the study area. Soil samples were collected from 10 locations and analyzed as per CPCB norms. The soil sampling locations are marked in **Figure 3.5**and shown in **Table 3.12.** Thephysico-chemical characteristic of these soil samples is given in **Table 3.13.** 

**Table 3.13: Description of soil sampling locations** 

Soil monitoring locations					
SQ 1	Project Site				
SQ 2	Danka Bigha	3.12 Km SE			
SQ 3	Lodipur	5.81 Km SE			
SQ 4	Bihta	5.41 Km SW			
SQ 5	Moap Kalan	3.86 Km North

16	Porosity	%	49.2	30.2	31.2	30.2	31.2

#### **Observations:**

Samples collected from identified locations indicate the soil is sandy type near project site and the pH value ranging from 7.25 to 8.6, which shows that the soil is alkaline in nature. Potassium is found to be from 107 mg/kg to 165 mg/kg.

## 3.5 NOISE ENVIRONNENT

The noise levels within the study area were recorded using Sound Level Meter and noise monitoring results were compared with the Ambient Noise Quality Standard notified under Environment Protection Act, 1986. The levels recorded are as stated in **Table 3.15.** The noise level monitoring locations are marked in **Figure 3.6** and shown in **Table 3.14.** 

**Figure 3.6 Noise Monitoring Stations** 

**Table 3.15: Noise Quality Monitoring Stations** 

	Noise Monitoring Locations						
NQ 1	Project Site						
NQ 2	Danka Bigha	3.12 Km SE					
NQ 3	Bahadurpur	8.36 Km East					
NQ 4	Lodipur	5.81 Km SE					
NQ 5	Moap Kalan	3.86 Km North					
NQ 6	Bihta	5.41 Km SW					
NQ 7	Dhanchhuhan	5.75 Km NE					
NQ 8	Dharmdas Dihri	9.80 Km SW					

**Table 3.16: Noise Monitoring Results** 

S.	Locations	Equivalent Noise Level, dB (A)

No.			Guideli	per CPCB nes),Leq, B(A)	Observed value Leq, dB(A)		
			DAY*	NIGHT*	DAY*	NIGHT*	
1	Project Site	Residential Zone	55	45	42.5	31.6	
2	Danka Bigha	Residential Zone	55	45	43.5	41.2	
3	Bahadurpur	Residential Zone	55	45	50.6	38.6	
4	Lodipur	Residential Zone	55	45	43.1	36.2	
5	Moap Kalan	Residential Zone	55	45	42.6	36.2	
6	Bihta	Residential Zone	55	45	43.9	36.2	
7	Dhanchhuhan	Residential Zone	55	45	43.2	32.8	
8	Dharmdas Dihri	Residential Zone	55	45	45.3		
	Dimi					38.5	

#### **Results**

Noise monitoring reveals that the minimum & maximum noise levels at day time were recorded as 42.5 dB(A) to 50.6 dB(A) respectively. The minimum & maximum noise levels at night time were found to be 31.6 dB (A) & 41.2 dB(A) respectively.

There are several sources in the 10 km radius of study area, which contributes to the local noise level of the area. On the commencement of the project, the sound from traffic activities will add to the ambient noise level of the area. This will be kept under check by taking proper suggestive measures.

## 3.6 BIOLOGICAL ENVIRONMENT

#### 3.6.1.1 Introduction

The ecological study reflects the potential of a regional ecosystem and its biological components. In India, the biological diversity of plants and animals varies from region to region on account of their diversity and density. Producers (plants), consumers (animals), and decomposers (microbes) govern the whole cycle of ecology. Plant and animals both are interdependent on each other.

The biological study is essential to understand the impact of any developmental project on the existing flora and fauna present in the study area. Hence, studies on various aspects of the ecosystem play an important role in identifying sensitive issues for undertaking appropriate action to mitigate the impact if required.

The Environment baseline data generation report in respect of flora-fauna has been prepared to assess the current ecology & biodiversity scenario of the area; and to carry out Environmental Management Plan based on the proposed project activities. The plan will identify and address the environmental and ecological conservation implications of the area. Conservation of biodiversity is essential for sustainable development.

The main objective of the ecological survey is aimed to find out the baseline status of flora and fauna (terrestrial and aquatic ecosystem) of the study area before the start of Sand Mining Project, On Son River At Son Block No.-39 Sand Ghat.

## 3.6.2 Description of the study area

The Proposed Sand Mining Project was located on Son River at Mauja—Baga, Anchal-Sandesh, District-Bhojpur (Bihar).

The proposed mining was a cluster of 02 mining lease area of block 39 & 40 cluster over an combined area of 64.0 Ha is for river bed sand mining on Son River

# 3.6.2.1 Description of Eco-sensitive zones in the Study Area (Wildlife Sanctuary/ National Parks/Animal or Elephant Corridors/ Protected Wetlands etc.)

There are no National parks, Biosphere Reserves, Wildlife corridors, Tiger/Elephant reserves (existing as well as proposed), within 5 km from the present project.

Also, areas protected under international conventions, national or local legislation for their ecological, landscape, cultural or other related value are doesn't exist in the core and buffer zone of the present project. On the other hand, the proposed alignment will cross over some riverine channel in the core zone. Adequate structure for cross drainage shall be constructed in order to maintain the natural hydrology and protection of all forms of biota found there in all the water bodies of the area. Apart from the above, the proposed project the area will promote tourism activities due to the existing Beraila Wildlife Sanctuaries (Bird Sanctuary).

#### 3.6.3 Drainage /Water Bodies of the Study Area

Apart from these, some seasonal (monsoon-fed) riverine streams and Nallas are also present in the study area. Few ponds are also recorded nearby the different villages mainly used for fish farming, Cattle feeding, Irrigation purpose by the villagers, etc.

## Scope and Objectives of the Study

The above study aims in identifying potential impacts on flora and fauna and to suggest relevant compensatory and mitigatorymeasures to protect/conserve biodiversity in the likely impacted area due to the project activity. Following points to be covered under the scope of work:

- ➤ Survey of terrestrial & aquatic flora & fauna for core & buffer zone separately.
- ➤ Details of endemic species found in the study area and their IUCN status, Schedule status (as per WPA, 1972).
- ➤ Survey of the study area in terms of features like breeding &spawning grounds, habitats, flight paths, and the migratory path of the animals.
- > Survey of flora covering types e.g. agriculture crop, commercial crop, plantation, natural vegetation/forest type, grass land. The endangered & endemic species of flora & fauna beside any other flora, if present are also to be identified.
- ➤ The survey has been covering total listing of the faunal population. The survey has also covered endangered, endemic, migratory & detail of aquatic fauna.
- ➤ The assessment of potential damage to terrestrial & aquatic flora and fauna. The impact should be categorized as primary & secondary, temporary and long term, unavoidable & risk transboundary impacts, possible irreversible change.

## 3.6.4 Methodology/ Data Collection

A primary field survey was carried out within a 10 km radius of the proposed project in winter period (Dec-Feb 2023). Both terrestrial and aquatic ecosystems have been studied to understand the biological environment. Secondary data were collected from authentic sources like the Forests Department, Fisheries Department, Agriculture Department of Son , and available published literature.

## 3.6.5 Flora (Aquatic and Terrestrial)

For the collection of data for aquatic flora, the methodology prescribed in the standard book of Adoni (1985), NEERI (1998), and APHA (2015) has been adopted. A total of 05 sampling sites were selected for the collection of samples to analyze the aquatic flora.

On the other hand, for the terrestrial data, community analysis was carried out during the summer season. For the collection of terrestrial data, a total of 05 sampling points were selected. At every sampling site, quadrates of 10m X 10m (100 sq.m.) size were randomly laid to study tree species. The circumference of all the adult individuals [(≥30 cm circumference at breast height (CBH)] was measured with Freeman's tape. The study of communities was carried out by using qualitative characteristics, and quantitative characteristics. Qualitative characteristic mainly involved presence/absence of the species, genera, and family. This showed the community structures, composition and other characteristic can be readily described by visual observation without actual measurements. The quantitative analysis involved the structure and composition of vegetation across vegetation types and compared in terms of frequency, density, abundance, and basal area of tree species.

## 3.6.6 Fauna (Aquatic and Terrestrial)

For the collection of data for aquatic fauna, the methodology prescribed in the standard book of Adoni (1985), NEERI (1998), and APHA (2015) has been adopted. A total of 05 sampling points were selected for the collection of samples to identify the the aquatic fauna.

On the other hand, for the terrestrial data, the assessment of fauna was done by an extensive field survey in the area at 05 locations. During the survey, the Line Transect method was used for the study of mammals and Transact & Patch sampling were used for Amphibians, visual encountered methods was used for reptiles and butterflies. The presence of wildlife was also confirmed from the animal calls, footmarks, excreta, and from the local inhabitants depending on the animal sightings and the frequency of their visits in the project area which was later confirmed from the different government offices like the forest department or wildlife department, etc.

Observations of birds were made during a walk-through in the chosen transect for sighting birds. The number of birds observed in each sampling location was listed. Birds were noted and identified with the help of binocular and standard field identification guides.

# 3.6.7 Sampling Sites

A total of 05 sampling site were selected for the terrestrial vegetation, avian fauna, and other terrestrial animals like reptiles, mammals, etc. For the collection of samples and data of

aquatic flora and fauna, 05 separate sampling sites were also selected at different locations in the study area.

#### 3.6.8Flora of the Study Area

The core zone of the proposed project area doesn't have any major natural forest land.

A major part of the core and buffer zone of the project is agricultural land having some major vegetation in the form of agro forestry. Vegetation patterns in villages and surrounding areas are slightly different from the rest of the areas in the Bhojpur District. The common species grown near the villages are mostly edible, fruits bearing or useful plants. Purposely planted tree patches (mostly fruit-bearing) are available nearby several villages in the study area. The most dominant tree species in the study area are Aegle marmelos (Bel), Azadirachta indica (Neem), Emblica officinalis (Amla), Dalbergia sissoo (Sisam), Ficus bengalensis (Bargad), Musa paradisiacal (Kela), Syzygiumcumini (Jamun), Cassia siamea (Kasod/Siris), Litchi chinensis (Litchi), Mangifera indica (Aam) and in case of shrubs Antigonum leptopus, Ricinus communis, Lantana camara, Jatropha gossipifolia and Cassia auriculata etc. The most dominant species in the study area of both the district was Mangifera indica (Aam) and its different varieties.

#### 3.6.9 Flora of Core zone

## 3.6.9.1 Terrestrial Flora of Core zone (Natural vegetation etc.).

There is no flora found in the core zone

## 3.6.9.2 Agricultural Crops/ Commercial Crops of the Core zone and Buffer Zone

Details of the agricultural vegetation and commercial crops were collected from the 09 selected sites of the core (Bhojpur district) and the details are given in table 4. These crops are similar to the crops of buffer zone also. So, the same information is applicable for the core and buffer zone.

Table 3.18: List of Crops seasonally planted by respective farmers in the Core and Buffer Zone

## 3.6.9.3 Aquatic Flora of Core zone (Phytoplankton/ Macrophytes).

Aquatic floral details of the core zone were collected from 08 selected sites of the study area. Some sites were located buffer zone adjacent to the present alignment, however some were located in the core & buffer zone. Details of phytoplankton and macrophytic vegetation of the core and the buffer zone are given in tables 3.19, 3.20 & 3.21, and Figures 3.10 & 3.11.

**Phytoplankton:**Most of thethe phytoplankton species recorded from the core zone was similar to the buffer zone also. So, the same information is applicable for the core and buffer zone. Phytoplankton species were collected and identified from 08 selected sampling sites of the study area. A total of 69 phytoplankton species were recorded from the different water bodies of the study area, out of which 27 species were of class Chlorophyceae, 17 species of Cyanophyceae, 19 species of Bacillariophyceae, and 6 species of Euglenophyceae. Details of Phytoplankton species are given in table 3.19.

Table 3.19: List of Phytoplankton species present in different water bodies in study area (Core and Buffer Zone).

**Macrophytes:** The aquatic vegetation recorded from the core zone was similar to the aquatic vegetation of the buffer zone also. So, the same information is applicable for the core and buffer zone. The maximum number of aquatic vegetation was recorded at sites 06 and 08 due to the perennial nature of the water bodies. On the other hand, other water bodies support less vegetation due to a lack of water (monsoon-fed streams), and moisture. The details of Macrophytes species are given in table 3.21.

#### 3.6.10 Flora of Buffer zone

## 3.6.10.1 Terrestrial Flora of Buffer zone (Natural vegetation/Commercial vegetation).

During the present survey,a total of 77 species of plant species were observed from the study area. Out of 77 plant species,42species of tree, 18 species of shrubs/herbs, 6 species of climbers, and 10 species of Grass species were recorded from the buffer zone of the present study area. The below-mentioned vegetation details have been collected from the Core as well as Buffer zone of the present study area. All the details have been furnished based on the field survey at different locations and data supported by the Department of Forest, Bhojpur of Bihar. The details of vegetation of the buffer zone is given in Table 3.22.

Table 3.22: List of Trees, Shrubs, Herbs and Grasses observed in Buffer Zone

## 3.6.10.2 Agricultural vegetation/ Commercial vegetation of the Buffer zone.

The variety of Crops and cropping patterns in the core and the buffer zone was the same in the study area. Vegetation details of the buffer zone were collected from 05 selected sites (TS-1 to TS-05) and the details are given in Table 3.17.

## 3.6.10.3 Aquatic Flora of Buffer zone (Phytoplankton/ Macrophytes/ Aquatic Weeds)

**Phytoplankton:** The diversity of Phytoplankton species was similar in the core and buffer zone. The details of macrophytic vegetation of the buffer zone are given in Table 3.19 & 3.20 and Figure 3.10.

**Macrophytes:** The diversity of aquatic macrophytes was similar in both core and buffer zone. The details of macrophytic vegetation of the buffer zone are given in Table 3.21 and Figure 3.11.

## 3.6.11 Fauna of the Study Area

Proposed alignment passing through the rural and purely in the agricultural field. At some places, it will cross from adjacent to some villages in the study area. The study area is devoid of any natural forest, so, major wildlife animals are rarely found in the area. Only some moving animals were observed. Domesticated animals mainly constitute the faunal population within the project area.

The assessment of fauna was done on the bases of secondary data collected from different government offices like the forest department, wildlife department, etc. The presence of wildlife was also confirmed by the local inhabitants depending on the animal sightings and the frequency of their visits in the project area.

During the present study period, a large number of local birds are noticed in the buffer zone of the study area. But, there are no bird habitats like nesting, breeding, and foraging patterns are noticed in the core zone.

#### 3.6.12 Fauna of the Core Zone

# 3.6.12.1 Terrestrial fauna of core zone (Mammals/Reptiles/amphibians/birds/insects etc.).

The domesticated animals like; Buffalo (*BuSands bubalis*); Ass (*Equus hemionus*), Cow (*Bos primigenius*); Goat (*Capra aegagrus*) Horse (*Equus caballus*); and Dog (*Canis lupus familaris*) were observed moving in different parts of the study area (including core and buffer zone), especially nearby town and villages. Other mammals and reptiles found in the study area are listed in Table 3.23.

Table 3.23: List of Mammals/Reptiles/Amphibians/Birds recorded from the Core Zone

# 3.6.12.3 Aquatic Fauna of Core zone (Zooplankton/ Macro-invertebrates/ Fishes/ Amphibians/ Turtles etc.)

All the aquatic fauna recorded from the core zone were also recorded from the buffer zone and most of the sampling sites are the same for the core and buffer zone as given in table 3.17. So, the list of aquatic fauna of the core zone is merged with the details of the buffer zone and is given in Table 3.25 to 3.27.

#### 3.6.12.4 Fauna of Buffer zon

To prepare a detailed report on the status of faunal biodiversity of the present study area (1 km buffer) of Bhojpur district of Bihar and to assess the impacts due to digging/ leveling of alignment route/ construction of bridge/ operational activity which evolves suitable mitigation measures to protect & conserve biodiversity following components were studied: terrestrial biodiversity, wildlife survey (diversity), habitat study (feeding, breeding, roosting areas), distribution of birds, rare & endangered species of the study area.

The fauna of the study area (Core and Buffer zone) vary upon the local topography and different types of habitats. The fauna of the study area has been categorized into two categories based on their habitat, i.e.

- (i) Aquatic fauna and
- (ii) Terrestrial fauna.

During the present survey, there are some seasonal, perennial and private water body was observed along with the proposed alignment, which will be affected due to the present project activities. The alignment of the project will cross a few seasonal and perennial streams.

# **3.6.12.6** Terrestrial Fauna of Buffer zone (Mammals/Reptiles/Amphibians/Birds/ Insects etc.)

The major part of the study area lies under agricultural fields and barren land which restricts the wildlife habitat significantly. There is neither any wildlife sensitive area nor any corridor for the movement of wildlife in the study area. A list of the animals of the study area has been prepared on the basis of the survey and also inquire from the local people. The animals, thus recorded were cross-checked with Wildlife (Protection) Act, 1972 for their schedule status. Faunal details of the study area are given in Tables 3.25 to 3.27.

## i. Mammals and Reptiles/ Amphibians

The domesticated animals like Goat (*Capra aegagrus*); Buffalo (*BuSands bubalis*); Cow (*Bos primigenius*); Horse (*Equus caballus*); Ass (*Equus hemionus*) and Dog (*Canis lupus familaris*) were observed moving in different parts of the study area, especially nearby town and villages. Other mammals and reptiles found in the study area are listed in Table 3.25.

# 3.6.12.7 Aquatic Fauna of Buffer zone (Zooplankton/Macro-invertebrates/Fishes/Amphibians /Turtles etc.)

Aquatic fauna is referred to as any form of an animal that has adapted to living in the aquatic environments such as rivers, lakes, ponds, dams, streams, etc.). Son River and its adjoining streams are formed the drainage in the study area. Few other seasonal water bodies like village ponds, streams, and nallas are also present in the study area. In general, faunal account of any water bodies can be divided into following categories, *i.e.*,

- (i) zooplankton,
- (ii) Macro-invertebrates/Insects/Benthos
- (iii) Fishes
- (iv) Amphibians/ Reptiles/ etc.

Details of Zooplankton; Macro-invertebrates/insects/benthos; Amphibians/Reptiles and Fishes recorded from the different water bodies of the study area (Bhojpur district) are given in Tables 3.28 to 3.31.

## i. Zooplankton

Zooplankton is commonly found in all types of aquatic habitats. These are recognized as secondary producers and considered as one of the best tools for the environmental monitoring program. During the present study period, a total of 49 zooplankton species was recorded and identified comprising of class Protozoa (8 species), Rotifera (20 species), Cladocera (10 species), Copepoda (8 species), and Ostracoda (3 species). The details of the zooplankton diversity of different habitats are given in Table 3.28 and Fig 3.12.

Table 3.28: Zooplankton species found in the different water bodies situated in the buffer zone

### ii. Macro-invertebrates (Insects/Benthos)

Macro-invertebrates are commonly found in all types of aquatic habitats such as streams, rivers, wetlands, lakes, and ponds. The term macro-invertebrate is used for those animals that have no backbone and can be seen with the naked eye. These animals generally include insects, crustaceans, mollusks, and annelids. They are significant within the food chain as larger animals such as fish and birds rely on them as a food source. None of the macro-invertebrate species have been observed under the of Rare, Endangered, and threatened

category. Various macro-invertebrate species were collected and identified from the present study area and listed in Table 3.29.

### iii. Amphibians

Amphibians and reptiles are commonly found at places along the margin of aquatic and terrestrial systems. The presence of water bodies like rivers, streams, etc. in the study area are providing shelter to many amphibian species. Some of the commonly reported amphibian

species in the present study areas are given in Table 3.30.None of the Amphibians and Reptiles have been observed under the Rare, Endangered, and threatened category. Also, none of them are under the Schedule-I category as per Wildlife Protection Act, 1972.

Table 3.30: Amphibians and Reptilesrecorded from the Core and Buffer zone

#### (iii) Fishes

The study area of the present Project development project has several lentic and lotic water bodies in which few are perennial and most of the water bodies are seasonal or monsoon fed. Jammuaririver is a major lotic system in the study area. Some private ponds are also present in the study area which are mainly used for the culture of fishes. All these water bodies support fish species. Fishes found in the study area are listed in Table 3.31 and their site wise species variation is shown in Fig. 3.14.

### 3.6.13 Observations of Present Study (Flora & Fauna)

### 3.6.13.1 Flora

Most of the parts of the present study area (Bhojpur district) are agricultural fields, villageland. The forest of the district comprises tropical deciduous vegetation due to high temperature and humidity. No any rare, endangered and threatened floral species have been observed from the core and buffer zone of the present study.

### 3.6.13.2Fauna

There are no National parks, Sanctuaries, Biosphere Reserves, Wildlife corridors, Tiger/Elephant reserves (existing as well as proposed), within 1 km buffer area as well as 5 km of the project area. No any endangered and threatened faunal species were observed from the core and buffer zone of the present study area. On the other hand, there is no any

Schedule-I fauna was recorded as per the Wildlife (Protection) Act, 1972. However, care will be taken during the developmental activities if found any.

#### 3.7 Socio-Economic Environment

### **Demography & Socio-Economic Features**

### Introduction

The proposed sand mine project is situated at Mauja-Andhary Mahaji (424) & Imadpur, Tehsil - Sahar, District-Bhojpur (Bihar) over an area of 24.5 hectares. The state government has given consent for Sand mining to Assistant Director District Mining office Bhojpur. This project falls under Category "B1" as per EIA Notification 2006 and amended till date, of the Ministry of Environment and Forests & Climate Change, New Delhi

### **Demography**

Demography is one of the important indicators of environmental health of an area. It includes population, sex ratio, number of households, literacy, population density, etc. In order to assess the Demographic & Socio-economic features of the area, Census data 2011, for the 3 concerned districts i.e. Bhojpur, Rohtas and ArwalinBiharstate was compiled and placed in the form of tabulation and graphical representation.

### Demography of the BhojpurDistrict

As per the census records 2011, Bhojpur district has a population of 27,28,407 persons followed by 14,30,380 males and 12,98,027 females respectively.

The decadal variation of the district has been seen at 21.6% during the decade 2001-11. The Urban area of the district has attained a higher decadal variation of 24.8% as compared to that of rural area at 21.1%. The district has a population density of 1,136 inhabitants per square kilometre (2,940/sq. mi). Its population growth rate over the decade 2001-11 was 21.27%.

As per 2011 census sex ratio of the district is 907 females per 1,000 males. The same for rural and urban areas of the district stands at 910 and 892 respectively. The sex ratio of population in the age group 0-6, which works out to 918, is much higher than the sex ratio of the total population (910) in the district of Bhojpur. While the sex ratio of (0-6) population in the rural areas of the district is 920, the sex ratio of (0-6) population for the urban areas is only 904.

## **Mother Tongue**

The population of the Bhojpur district during 2001 was 22,43,144. As per distribution of different mother tongues (languages mentioned under 8th Schedule of Constitution of India) as returned during the 2001 Census for Bhojpur district, Hindi, the main mother tongue of the district was returned by 96.1 percent (21,55,948 persons) of the population. The corresponding percentage for the Urdu, the second most prominent language spoken in Bhojpur district, was 3.7 percent (84,074 persons). Speakers of other Scheduled languages were very thin in number than the two described above.

.

### Religion

The population of the Bhojpur district during 2011 was 2,728,407. Hindus constitute 92.30 percent (2,518,216 persons) of the population in the district followed by Muslims 7.25% (197,819 persons). All other four major religious communities have almost negligible percentages.

## Methodology

In order to assess the Demographic & Socio-economic features along with the 10km distance based on field surveys and public consultations undertaken during the baseline field study period and Census records 2011, for the 3 concerned districts i.e. Bhojpur, Patnaand Arwal in Bihar state respectively was compiled and placed in the form of tabulation and graphical representation. Entire study area is observed predominantly rural, no town found in the study area.

### **Purpose of the Study**

Socio-economic study was conducted to establish the baseline demographic features and impacts due to this 'SandGhatMining Project', as operation phase of any project invariably leads to Socio-economic changes. The construction phase of any kind of project could lead to unplanned and haphazard development of slums of various size and description with little or rudimentary.

### **Description of Social Environment**

As per the Census Records 2011, the study area has a total of 159 villages lying under 3 main districts namely Bhojpur, Rohtas and Arwal in Bihar state. Overall study area villages are falling mainly under 8 tehsils namely Shahpur (03 villages), Tarari (59 villages), Sahar (37 villages), Kochas (01 villages), Dinara (05 villages), Karakat (05 villages), Arwal (07 villages) and Kaler (42 villages) of above mentioned 3 districts in Bihar State. No town found in the study area. There are seventeen (17) villages of above mentioned 3 districts of Bihar state found as uninhabited villages in the study area.

#### Population Distribution within 10 km radial Study Zone

Population Distribution within 10 km radial Study Zone

As per the Census Records 2011, the total population of 10 km study zone was recorded as 305088persons of 159villages/townsof 3 main districts named Bhojpur, Rohtas and ArwalinBihar state. Male-female wise total population was recorded as 157381 males (51.6%) and 147647(48.4%) females respectively.

Total number of 'Households' was observed as 49575in the 10 km radius study zone. Scheduled Caste ('SC') population was observed as 65576persons consisting of 33832males (51.6%) and 31744females (48.4%) in the 10km study zone. Scheduled Tribes ('ST') population was also observed as 537 persons (0.2%) consisting of 279males (52.0%) and 258 females (48.0%) in the 10 km study zone. The child population (0-6 Age) of the study area is recorded as 53345(17.5%) and comprising of 27400 (51.4%)males&25945 (48.6%) females respectively.

Village wise details of population distributionare given as follows in Table 3.32 & 3.33

**Table 3.32 : Village-wise Population Distribution** (10km)

### **Sex Ratio**

The 'Sex Ratio' of the study area is a numeric relationship between females and males of an area and bears paramount importance in the present day scenario where the un-ethnic predetermination of sex and killing of female foetus during pregnancy is practiced by unscrupulous medical practitioners against the rule of the law of the country. It is evident that by contrast the practice of female foeticide is not prevalent in the study area.

The 'Sex Ratio' was observed as 907females per 1000 males in the District. The same was recorded as 938females for every 1000 males in the study area. The child (0-6 yr age) sex ratio of the study area was observed as 947 female children per 1000 male children.

The village wise male-female population distribution for the study area is depicted and shown by graphical representation in **Table 3.34 & Figure 3.7** 

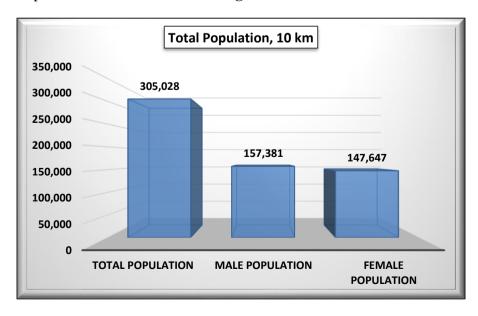

Figure 3.7: Male-Female Wise Population Distribution

### **Scheduled Caste & Scheduled Tribe Population**

On the basis of the village wise SC & ST population distribution of the study area during 2011, the 'Scheduled Castes' population was observed as 65576 persons consisting of 33832 males and 31744 females respectively in the study area which accounts as 21.5% to the total population (305028 persons) of the study area. Scheduled Tribes ('ST') population was observed as 537 persons, accounts as 0.2% to the total population of the study zone consisting of 279 males and 258 females in the 10 km radius study zone. It implies that the rest 78.3% of the total population belongs to the general category.

Male-female wise distribution of 'SC' & 'ST' population in the study area is graphically shown in **Figure 3.8 .& 3.9** as follows.

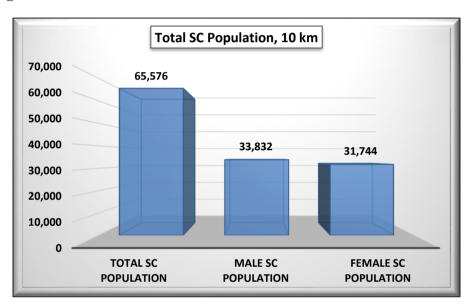

Figure 3.8 : Scheduled Caste Population in the Study Area

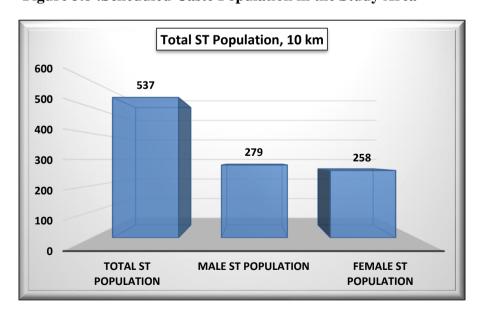

Figure 3.9 : Scheduled Tribes Population in the Study Area

### **Literacy Rate**

Literacy level is quantifiable indicator to assess the development status of an area or region. Male-Female wise literates and illiterate's population is represented in **Table 3.34** Total literate's population was recorded as 176021 persons (57.7%) in the study area. **Table 3.34** reveals that Male-Female wise literates are observed as 106583&69438 persons respectively, implies that the 'Literacy Rate' is recorded as 57.7% with male-female wise percentages being 35.0% &22.8% respectively.

The Male-Female wise graphical representation of literates &illiterate's population in study area villages/town is shown in **Figure 3.10** 

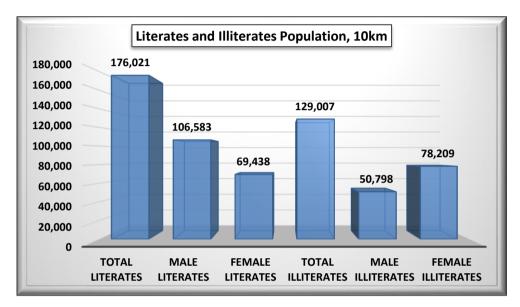

Figure 3.10 : Male-Female Wise Distribution of Literates & Illiterates

### **Economic Profile ofBhojpurDistrict:**

Agriculture is the main source of income for majority of people of the district. Rice, Wheat & Gram are the three main crops grown in the district. The other major economic activities of the district are dairy, rice-milling, petty trade, transport, etc. The district is major producer of rice and milk.

Sand is major mineral of Bhojpur district of Bihar. Yellow sand in Sone river and Ganga river are major source of revenue collection in district as well as soil/clay is actively mined for bricks and pottery industry. In the financial year, huge amount of clay was produced for these purposes. It is also used as a decorative material in landscaping. Specific types of sand are used in the manufacture of glass and as a molding material for metal casting. Wide flood plains and high banks are the common features in the course of the Ganga and the Sone along with silt and clay deposits.

In 2006 the Indian government named Bhojpur one of the country's 250 most backward districts (out of a total of 640). It is one of the 38 districts in Bihar currently receiving funds from the Backward Regions Grant Fund Programme (BRGF).

### **Workers Scenario:**

Occupational studied to assess the skills of people in the study area. Occupational pattern helps in identifying major economic activities of the area. In the study area the Main and Marginal Workers population was observed as 64488(21.0%) and 36674(12.0%) to the total population (305028), while the remaining 203866(67.0%) persons were recorded as non-

#### **ABBREVIATIONS:**

MAIN WORKERS POPULATION: MAIN WORK\_P: Main worker's total population, MAIN\_CL\_P: Main cultivated labour population, MAIN\_AL\_P: Main agricultural labour population, MAIN\_HH\_P: Main workers

population involved in household industries, MAIN\_OT\_P: Main other worker's population

**MARGINAL WORKERS POPULATION:** 

MARG WORK\_P: Marginal worker's total population, MARG\_CL\_P: Marginal cultivated labors total population, MARG\_AL\_P: Marginal agricultural labors population, MARG\_HH\_P: Marginal workers involved in

household industries, MARG\_OT\_P: Marginal other workers Population

35 :Village-wise Occupational Pattern (10km)

Distribution of work participation rate of the study area population is shown in **Table 3.36** as follows;

**Table 3.36 : Distribution of Work Participation Rate**(10km)

Occupation Class	Year, 2011
Main Workers	64488 (21.0%)
Male	51596(80.0%)
Female	12892(20.0%)
Marginal Workers	36674(12.0%)
Male	21911(59.7%)
Female	14763(40.3%)
Non-Workers	203866(67.0%)
Male	83874 (41.0%)
Female	119992(59.0%)
Total Population (10km)	305028
Source: Census of India	Records, 2011

Graphical representation of Workers Scenario is given below as Figure 3.11

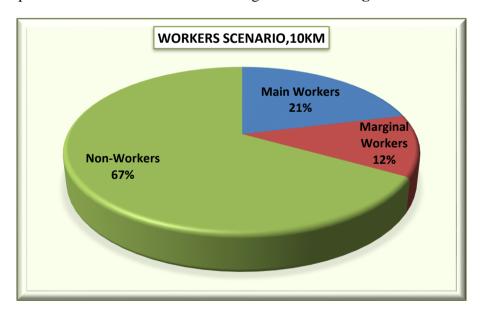

Figure 3.11: Workers Scenario of Study Area

### **Composition of Main Workers:**

The 'Main Workers' were observed as 64488persons (21.0%) to the total population (305028) of the study area and its composition is made-up of Casual laborers as 19700 (30.0%), Agricultural laborers as 33419(52.0%), Household workers 1727(3.0%) and other

Page | 104

workers as 9642(15.0%) respectively. Composition of Main workers is shown below as Figure 3.12

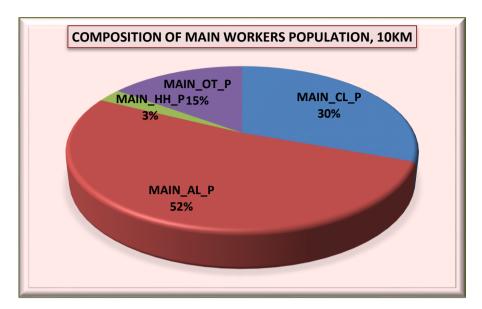

Figure 3.12 : Composition of Main Workers Population

### **Composition of Marginal Workers:**

The total marginal workers are observed as 36674 which constitute 12.0% to the total population (305028) comprising of Marginal Casual Laborers as 4591 (13.0%), Marginal Agricultural Laborers as 25057(68.0%), Marginal Household laborers as 2352 (6.0%) and marginal other workers were also observed as 4674 (13.0%) of the total marginal workers respectively.

Details about marginal workers in the study area are tabulated in **Table 3.37**. Composition of Marginal workers is shown in **Figure 3.13** as follows.

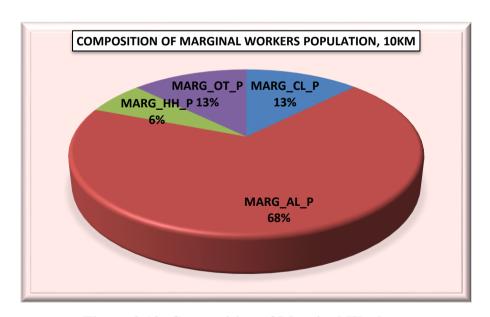

Figure 3.13 : Composition of Marginal Workers

Page | 105

### **Composition of Non-Workers:**

The total Non-worker's population was observed as 203866which accounts67.0% to the total population (305028) of the study area. Male-female wise Non-worker's population was recorded as 83874 Males (41.0%) and 119992Females (59.0%) respectively.

Details about Total Non-workers in the study area are compiled in **Table 3.37** Graphical representation of Non-worker's population is shown as follows in **Figure 3.14** 

Non-Workers Population								
Persons	Males	Females						
203866	83874 (41.0%)	119992(59.0%)

## Basic Infrastructure Facilities Availability(as per the census records of 2011)

A review of basic infrastructure facilities (*Amenities*) available in the study area has been done on the basis of the field survey and Census records, 2011 for the study area inhabited villages of Bhojpur, Patnaand Arwaldistricts in Bihar state. The study area has average level of basic infrastructure facilities like educational, medical, potable water and power supply and transport& communication network.

As per the Census Records 2011, the study area has a total of 159 villages lying under 3 main districts namely Bhojpur, Rohtas and Arwal in Bihar state. Overall study area villages are falling mainly under 8 tehsils namely Shahpur (03 villages), Tarari (59 villages), Sahar (37 villages), Kochas (01 villages), Dinara (05 villages), Karakat (05 villages), Arwal (07 villages) and Kaler (42 villages) of above mentioned 3 districts in Bihar State. No town found in the study area. There are seventeen (17) villages of above mentioned 3 districts of Bihar state found as uninhabited villages in the study area.

### **Educational Facilities**

There is a total no. of 170 Primary schools existing in the 10km radius study area. Ninety (90) no of Middle schools are found in the study area. Only eighteen (18) Higher Secondary School (SS) and Six (06) Senior Secondary School (SSS) facility is available in the study area. The educational facilities have been further strengthening now and a number of private public schools and colleges are also functioning in the surroundings of the study area. Besides, there are Engineering and Medical colleges available in Towns and District headquarters only. Higher education facilities are available in Towns of the district. There is a considerable improvement in educational facility. The villages of the study area have no such facilities can reach within 5to 10km range. No town was found in the 10 km radial study area..

## Availability of University Education in Bhojpur District

There are several affiliated and constituted colleges of the Veer Kunwar Singh University, Arrah which impart under graduate and post graduate education in the district. IGNOU (Indira Gandhi National Open University) has opened study center H D Jain College in Arrah where one can study many distance courses of under graduate, post graduate and vocational etc.

### **Medical Facilities**

The medical facilities are provided by different agencies like Govt. & Private individuals and voluntary organizations in the study area. As per the census 2011, only 11 primary health centersexistin the study area; most of the study area villages depend upon the towns & district HQ of the study area having such facility. No community health centre exists in the study area. Only thirty-seven (37)Primary Health Sub-Centers exists in the villages of the study area. Only twenty-six (26) no of Mother & Child Welfare Centersarefound in the study area. Noallopathic hospitalexists in the study area. Only 2medical dispansaries were found in the study area. Only thirty-five (35) Family Welfare Centersare found in the study area. Overall study area villages are served by average medical facilities. Specialized medical facilities are available only in towns and District Headquarter (HQ) only.

### **Potable Water Facilities**

Potable water facility is available in most of the villages of the study area. The entire study area has average level of potable water facilities. Hand Pump(HP) water facility is commonly observed in the study area as potable water facility. Out of the total 159 villages,109 villages (68.5%) are served with River/Canal water in the study area. As per the census records 2011, only3 villageswere foundbeing served with Tank/Pond/Lake as potable water facility in the study area.

### **Communication, Road & Transport Facilities**

Apart from Post &Telegraph Office (PTO) services, transport is the main communication linkage in the study area. Compiled census 2011, data shows that the study area has good postal facilities in the 10km radius zone. About 51 villages(32.1%) were foundserving with Post Office facilities in the study area, remaining villages are depending upon towns of the study area. The study area has average rail and road network, passes from the area.

Only 2 villageswerefound with railway station facility in the study area. Nearest railway station is PiroRailway station at distance of approx. 15.0km in NW direction from the mine lease area site. Nearest town and District headquarter Arrah, is situated at approx. 40.0km in Northeast.

Site is well connected by Nearest State Highway (SH-81) ispassing at 1.0km towards Northdirection from the site.Nearest airport is Jayprakash Narayan International Airport Patna, in Bihar state, situated at 74.0km in Northeast direction from the mine lease area site

### **Communication**

Roads - The district of Bhojpur is well served by a network of roads. Road communication is the mainmode of transportation in this district. The roads are classified as the National Highways, State Highways, Major district roads and other district roads. They are maintained by the Public Works Department, the Rural Engineering Organisation, the Zila Parishad and Municipalities. It is also connected with the interior of the district by metalled road. Two National Highway NH-30 and NH-84 pass through the district.

The district has been fairly rich in road communication for a long time. Francis Buchanan has mentionedin 'Shahabad Journal' that there are some very good roads in the district. He traveled "by a very good roadwith brick bridges from Koilwar to Ara" he also mentions a few other good roads viz., "The great road ofBuxar, the Banaras road, road to Sasaram and the great road of Dumraon". Patna-Ara – Buxar road, Bihia-Piro road, Sasaram-Bikramganj-Ara road are also worth mentioning.

Railways - The district of Bhojpur has a railway communication system. It is served by East CentralRailway. Ara, the District Headquarters, is on the main line of Eastern Railway. It enters the district atKoilwar on the East and moves via Buxar to Moghalsarai on the West. Earlier, there was a narrow-gaugerail link from Ara to Sasaram. It is now closed since last 217 years. A new Broad-gauge rail line is beingconstructed between Ara and Sasaram.

Airways –The district of Bhojpur is not served by any regular air service.

Boats – The Ganga is navigable river in whole year round and goods are transported across the river tothe Uttar Pradesh in the North through boats also play in the Sone intermittently, through the district has anetwork of canals.

### **Banking Facility**

The study area has almost all the schedule commercial banks with ATM facility at urban areas and the district HQ.

*Trade and Commerce* - The development of the means of communication has had a great impact on the trade and commerce of the district. The district may now be said to be fairly well-connected by Road and Rail.

Ara town is the hub of commercial activities of the district. In Bhojpur district, trade consists mainly of export of pulses, rices, castor seed, milk products and vegetables and import of cotton textiles, iron and steel products, cement, coal and consumer goods.

### **Power Supply**

## **BASELINE DATA DESCRIPTION**

Project: Sand Mining Project (Bhoj Son 39 Sand Ghat) At Riverbed of Son River at Mauja Andhary Mahaji (424) & Imadpur, Anchal- Sahar, District- Bhojpur, Bihar.

It is revealed from the compiled information on amenities availability as per the census record of 2011; most of the villages and towns are with poor electrification for Domestic, Agriculture, and Commercial& for allpurposes in the study area. Only10villages (6.3%) and towns of the study area are electrified for domestic purpose, only 07villages (4.4%) were found for agricultural purpose, commercial purpose & for all purposes in the study area. Out of 159 villages in the study area, 132villages (83.0%) including 17uninhabited villages (10.7%) are not electrified for any purpose in the study area.

The district receives its entire power supply from Bihar State Electricity Board. All the towns of Bhojpur district have electricity. In the rural areas, the Government is trying to extended electric line to the maximum number of villages by implementing various schemes for rural electrification. There are 3 rural power sub-station of 33/11 K.V. at Koilwar, Behia and Shahpur in the district Bhojpur. Four other rural Power sub-stations of the same capacity are under construction at Garahani, Piro, Jagdishpur and Saraia. Total numbers of villages electrified in the district are 420.

Village/town wise Basic Infrastructure and Amenities availabilities data for the entire study area is compiled and presented in **Table 3.38** as follows;

Project: Sand Mining Project on Son River Block No – 03, 04, & 06Sand Ghat (Cluster Area 164.4 Ha.) at District- Son, Bihar.

## Brief Description of Places of Religious, Historical or Archaeological Importance and Tourist interest in Villages and Towns of the District:(District level information only)

- Brief description of place of religious, historical or archaeological and tourist interest are as follows;
- Dalaur The village is situated 2 kilometres east of Jadishpur and is noted as the site of the final battle between Babu Kuer Singh and the British forces in 1857. Situated 6 kilometres from Kulharia Railway Station in Koilwar block, the village is noted for the large contingent it provides to the Indian army.
- Koilwar The recently declared notified area committee, the town lies on the western bank of river Sone about 50 Kms. West of Patna and is the headquarters of the development block-cum-anchal of the same name. It is supposed to have a healthy climate and a sanatorium for T.B. patients has been built at a distance of two kilometers from the main town. There is a long road-cum-rail bridge over the river Sone. The upper part of the bridge serves the railways whereas pedestrians and vehicular traffic use the lower part.
- Kulharia The village lying in the Koilwar block is famous because of the Kulharia family whose members have great contributions towards the welfare of the State. One of the biggest college in the State, B.N. College of Patna was founded by Babu Bisheshwar Narain Singh, an ex-Zamindar of Kullharia family. His descendants have the credit of starting various other education institutions.
- Bibiganj The 1961 Census Report mentions the village as follows: "The village, situated 6 kilometers west of Arrah on the Arrah-Shahpur Road, has a bridge which is famous as the site of a battle between the Britisher and Babu Kuer Singh in 1857. There is also a forest known as 'Sarayan' used as the headquarters of guerilla warfare by Babu Kuer Singh ".
- Sasurhi (Katho) The village, which is situated 5 kilometres east of Jagdishpur, has a 300-year-old grave of the Muslim saint, Masar Dewan. It is held as sacred by the Muslims. Tar Situated about 10 kms. north-west of Piro the village derives its name from Tadika, a giantess killed by Lord Rama. There is an old tank in the village which is said to be the wrestling ground of Tadika.
- Behea A notified town during 80's lies Jagdishpur subdivision. It is on the main line of the East Central Railway. It is well connected by road. Behea was formerly the home of a branch of Harihobans Rajputs. It is believed that the Raja, Bhopat Deo, violated Mahini, a Brahmin woman, who thereupon hurt herself to death and in dying imprecated the most fearful curses on the Harihobans Rajputs. After this tragedy the clan left Behea and moved across the Ganges to Ballia. The tomb of Mahini lies under a Pipal tree close to the Railway at Behea and is visit3d by hundreds of worshippers especially the women.
- Deo The village has the remains of a temple of Sun God, believed to have been built by the Sea God in ancient times. The temple was ravaged by Mahmud Ghazni. Indra, Baroon and Kuber are enshrined in it.
- Arrah The District Gazetteer of Shahabad (1966) describes the town as follows:
- General Gunningham has identified Arrah with the place mentioned by Hiuen-Tsiang as that at which Asoka set up a Stupa to commemorate the conversion by Buddha of the demons of the desert who feasted on the blood and flesh of men. Even to this day, a legend lingers that this part of the country was the home of a powerful demon named Bakra, whose daily food was a human being supplied either by the village of Bakri or by Ghakrapur, as Arrah was then called. During their wanderings, the five Pandavas came to Ghakrapur and were entertained by a Brahman whose turn it was to supply a

**Chapter-III** 

## **BASELINE DATA DESCRIPTION**

Project: Sand Mining Project on Son River Block No-03, 04, & 06Sand Ghat (Cluster Area 164.4 Ha.) at District- Son, Bihar.

victim for the demon. Bhim Pandava, on hearing this declared that as he had eaten the Brahman's salt, he would go himself to the demon; and setting forth, he fought and killed him at Bakri, and then brought his body to Ghakrapur. This myth is found in a more complete form in the Mahabharatas and General Guninghan considers that it must have been one of the five honoured legends of antiquity which the Buddhists adopted for the glorification of their great teacher. The village Bakri still exists in the near neighbourhood of Arrah, and though there are no ancient remains at either place, the Brahmanical legend of Bakrasur is, in the opinion of General Guninghan, so clearly identical with that of the man eating demons described by the Chinese pilgrim that he accepts Arrah as the site of the stupa and lion pillar erected by Ashoka ".

## Social, Cultural Events

In the district of Bhojpur, no major social or cultural event has taken place during the decade. However, the district has been famous for fairs and melas held at different places throughout the year. Fairs and festivals are held regularly in the district. There are some shopkeepers who keep on moving from fair to fair throughout the year. Some of the fairs held in the district are quite old.

## Rehabilitation & Resettlement (R & R)

Policy to be adopted (Central/State) in respect of the project affected persons including home or land oustees and landless labour. Hence, any planning with respect to Rehabilitation & Resettlement is not applicable.

# **Anticipated Environmental Impact And Mitigation Measures**

Project: Sand Mining Project (Bhoj Son 39 Sand Ghat) At Riverbed of Son River at Mauja Andhary Mahaji (424) & Imadpur, Anchal- Sahar, District- Bhojpur, Bihar.(Area-24.5 Ha)

#### 4.0 GENERAL

Identification of all potential environmental impacts due to project is an essential step of Environmental Impact Assessment. In case of mining projects, impacts on biodiversity, air pollution, water pollution, waste management and social issues are significant. Both direct and indirect environmental impacts will be created on various environmental attributes due to proposed mining activity in the surrounding environment, during the operational phase.

The occurrence of sand (minor mineral) deposits, being site specific, their exploitation often does not allow for any choice except adoption of eco-friendly operation. Positive impacts on socio-economic environment are expected due to creation of employment opportunities. Mining activities are normally carried out over a long period which also encourages development in the area such as roads, schools, hospitals etc.

Keeping in mind, the environmental baseline scenario as detailed in Chapter III and the proposed mining activity described in Chapter II, it is attempted to assess the likely impact and its extent on various environmental parameters and likely mitigation measures to be adopted.

The following parameters are of significance in the Environmental Impact Assessment and are being discussed in detail:

- 1. Land Environment
- 2. Water Environment
- 3. Air Environment
- 4. Noise Environment
- 5. Biological Environment
- 6. Socio-Economic Environment
- 7. Solid Waste
- 8. Traffic Environment

# **Anticipated Environmental Impact And Mitigation Measures**

Project: Sand Mining Project (Bhoj Son 39 Sand Ghat) At Riverbed of Son River at Mauja Andhary Mahaji (424) & Imadpur, Anchal- Sahar, District- Bhojpur, Bihar.(Area-24.5 Ha)

#### 4.1 LAND ENVIRONMENT

The proposed extraction of stream bed materials, mining below the existing streambed, and alteration of channel-bed form and shape may lead to several impacts such as erosion of channel bed and banks, increase in channel slope, and change in channel morphology if, the operations are not carried out scientific &systematically.

The mining and allied activities involved due to mining result in creation of temporary haul roads and formation of mined pits, etc. affecting the landuse pattern. In this project, silt and clay are also produced as a constituent along with minerals, which are considered to be waste.

#### **Anticipated Impacts:**

- Mining activity will impact river bed topography by formation of excavation voids.
- River bed mining may bring in some change in topography at the nearby area of the mine lease.
- Stacks of solid waste generated from mining activity may hinder the flow of water in monsoon season.

#### **Mitigation measures:**

Adopting suitable, site-specific mitigation measures can reduce the degree of impact of mining on land. Some of the land-related mitigation measures are as follows:

- Excavated pits will get replenished annually in monsoon itself & will be restored to original.
- The mine working will remain confined to allotted river bed only, so it will not disturb any surface area outside the mine lease area which may affect topography or drainage.
- Solid waste will not be stacked on the bank side as it will hinder the flow of water in monsoon season.

9

# **Anticipated Environmental Impact And Mitigation Measures**

Project: Sand Mining Project (Bhoj Son 39 Sand Ghat) At Riverbed of Son River at Mauja Andhary Mahaji (424) & Imadpur, Anchal- Sahar, District- Bhojpur, Bihar.(Area-24.5 Ha)

#### **4.2 WATER ENVIRONMENT**

### **Anticipated Impacts:**

Mining of sand from within or near *river* has an indirect impact on the physico-chemical habitat characteristics during monsoon season. These characteristics include in stream roughness elements, depth, velocity, turbidity, sediment transport and stream discharge.

The detrimental effects, if any, to biota resulting from bed material mining are caused by following:

- ➤ Alteration of flow patterns resulting from modification of the *river*
- An excess of suspended sediment during monsoon season.

#### **Mitigation measures**

Project activity will be carried out only in the dry part of the Son River. Hence, none of the project activities affect the water environment directly. In the project, it is not proposed to divert or truncate any stream in monsoon season only. No proposal is envisaged for pumping of water either from the *River* (in monsoon) or tapping the ground water.

In the lean months, the proposed mining will not expose the base flow of the *River* and hence, there will not be any adverse impact on surface hydrology.

The deposit will be worked from the top surface up to a maximum depth of 3m below ground level or above the ground water table whichever comes first. Hence mining will not affect the ground water regime as well.

Further mining will be completely stopped during the monsoon seasons to allow the excavated area to regain its natural profile.

# **Anticipated Environmental Impact And Mitigation Measures**

Project: Sand Mining Project (Bhoj Son 39 Sand Ghat) At Riverbed of Son River at Mauja Andhary Mahaji (424) & Imadpur, Anchal- Sahar, District- Bhojpur, Bihar.(Area-24.5 Ha)

#### **4.3 AIR ENVIRONMENT**

### **Impact On Air Quality**

The proposed project includes various activities like development of benches, approach roads, haul roads, excavation and transportation of mineral and waste materials. These operations generally result in generation of dust and thereby pose health hazards. However, it is proposed that adequate control measures will be provided at every stage of operation such as, water sprinkling at loading, unloading points and on haul roads before transportation to reduce the fugitive dust emissions.

The mining is proposed to be carried out by opencast manual method. The air borne particulate matter (PM10) generated by ore and waste handling operations, transportation and screening of ore is the main respirable air pollutant. The emissions of Sulphur dioxide (SO2), Nitrogen Oxides (NO2) contributed by vehicles plying on haul roads will be marginal. Prediction of impacts on air environment has been carried out taking into consideration proposed production and net increase in emissions.

#### 4.3.1 Emissions Details

Loading - unloading and transportation of sand material, wind erosion of the exposed area and movement of light vehicles will be the main polluting source in the proposed mining activities releasing Particulate Matter (PM10) affecting Ambient Air of the area. Emission during, Loading and unloading was calculated by the area sources. Details of emission during loading/unloading and transportation on the haul road, wind erosion of the exposed area and road maintenance were discussed and combined impact was predicted in the worst case scenario under worst meteorological condition given as follows:

Loading and Unloading - US EPA, 2008, revision of emission factor for AP-42 was used to calculate emission of particulate matter released into the atmosphere during loading and unloading separately. Emission during loading was found more than during unloading. Emission of PM10 during loading was calculated and found to be 1.92 x 10-3 g/s/m<sup>2</sup> based on moisture content 10-20% mine. It is assumed that moisture content was 10% and further moisture content

# **Anticipated Environmental Impact And Mitigation Measures**

Project: Sand Mining Project (Bhoj Son 39 Sand Ghat) At Riverbed of Son River at Mauja Andhary Mahaji (424) & Imadpur, Anchal- Sahar, District- Bhojpur, Bihar.(Area-24.5 Ha)

will be increased to 10-20% to reduce emission of PM10 during unloading and average wind speed was 0.92 m/s as observed with site data as shown in wind rose and discussion of local meteorology of the area.

Haul Road - US EPA, 2006, revision of emission factor for AP-42 was used to calculate emission of particulate matter released into the atmosphere during transportation of ore and over burden by trucks operated per hour on haul road. Emission of PM10 due to transportation of sand on haul road was 1.65 x 10-4 g/s/m2 based on assumption that silt content spread on road surface was 5%, and efficiency of PM10 emission control 90%. Truck will be fully covered with tarpaulin material and emission of PM10 during on the haul road will be insignificant.

Based on the above consideration that there was low emission of PM10 during transportation of ore and overburden, however during loading & unloading, transportation of ore over the haul road, emission of PM10 of the exposed area due to wind erosion and movement of light vehicles on the road were not considered and combined with mining activities. US EPA based Dispersion ISCST-3 model was used for prediction of impact with 24-h meteorological data of the study period for the assessment of GLC.

#### 4.3.2 Meteorological Data

The meteorological data recorded at hourly interval during the month of Dec to feb 2023 on wind speed 0.92 m/s, wind direction, dry & wet bulb temperature, humidity, cloud cover and rainfall was processed to extract hourly mean meteorological data as per the guidelines of CPCB/MoEF for prediction of impacts from the area source. Stability was computed by Turner's method and mixing height was obtained from publication of IMD "Atlas of Hourly Mixing Height in India, 2008.

Data recorded from authorized source/Govt. agency were used as meteorological input for Dispersion Model which was stored in the computer for further analysis and interpretation to study the local meteorology of the study area. It was observed that westerly & north westerly was pre-dominant wind during summer as shown in wind rose (Figure 4.1) with low wind speed and 13.6 % calm condition was observed during study period at the site which was very much

close and cumbersome with long term meteorological data of IMD. Average wind speed was 0.92m/s. Impact of the pollutants was anticipated in southeast sector under influence of northeasterly & westerly winds. Ambient air quality locations were selected based on the long term wind rose pattern of the area. Air quality sampling locations were finalized to study the baseline status around the proposed site and to study impact at various locations. 24-h maximum impact of PM10 was envisaged in southeast sector at very short distance from the site due to moderate to low wind speed.

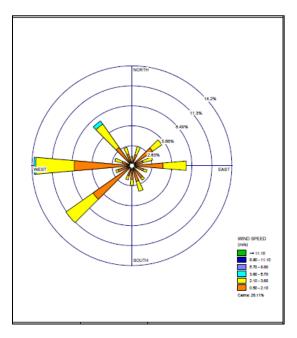

Figure 4.1: Wind Rose Diagram

Stable atmospheric condition E & F dominates in early morning and night hours and B, C & D in day hours were observed. Pollutants were dispersed from the proposed source under influence of local meteorology and dispersed on the ground in downwind direction close (~100 m) to the source under influence of moderate to low wind speed. High temperature and low humidity were observed at site with high temperature in day hours and low during night. There was no significant rain fall received and sky was clear of clouds in most of the days.

### 4.3.3 Frame work of Computation & Model details

By using the above-mentioned inputs, ground level concentrations due to the mining activities

# **Anticipated Environmental Impact And Mitigation Measures**

Project: Sand Mining Project (Bhoj Son 39 Sand Ghat) At Riverbed of Son River at Mauja Andhary Mahaji (424) & Imadpur, Anchal- Sahar, District- Bhojpur, Bihar.(Area-24.5 Ha)

have been estimated to know the incremental rise in ambient air quality and impact in the study area. The effect of air pollutants upon receptors are influenced by concentration of pollutants and their dispersion in the atmosphere. Air quality modeling is an important tool for prediction, planning and evaluation of air pollution control activities besides identifying the requirements for emission control to meet the regulatory standards and to apply mitigation measures to reduce impact caused by mining activities.

PM10 was the major pollutant occurred during mining activities. Impact of area source emission was considered and prediction of impact was made on various monitoring locations in the study area due to i) loading and unloading and iii) transportation of vehicles on the haul road in the mining area. Impact was predicted in the worst case scenario due to combined impact of loading and unloading and emission due to transportation of vehicles on mine on haul road of mining area and other mining activities will occur simultaneously.

Impact was predicted over the distance of 10,000 m and 2,000 m around the source in grids of 200m & 20 m respectively in Cartesian coordinates(X,Y) to assess the impact at each receptor separately at the various locations and maximum incremental GLC value at the project site. Maximum impact of PM10 was observed close to the source—due to low to moderate wind speeds. Incremental value of PM10 was superimposed on the base line data monitored—at the proposed site to predict total GLC of PM10 due to combined impacts.

#### 4.3.4 Model Results

The Air Quality Impact Prediction has been done by using "Industrial Source Complex Short Term version 3 (ISCST3), of USEPA". The main sources of air pollution with regard to the proposed project for the purpose of estimation of increase in PM10 are identified due to –

- (i) Loading/unloading of ore
- (ii) Transportation of ore by trucks on the Haul roads from mining benches.

Combined impact of PM10 was considered due to mining activities occurred simultaneously on various sampling locations is given in below table:

# **Anticipated Environmental Impact And Mitigation Measures**

(Iso-pleth of PM10 is  $9.0 \mu g/m^3$  occurred near the project site at 2000 m x2000 m grid network during

- i) ii) loading and unloading and
- ii) Transportation of ore over the haul road.

#### **Mitigation measures**

The collection and lifting of minerals will be done by loaders. Therefore, the dust generated is likely to be insignificant as there will be no drilling & blasting. The only air pollution sources are the road transport network of the trucks. The mitigation measures like the following will be resorted:

- ✓ Water sprinkling will be done on the haul roads twice in a day.
- ✓ Deploying PUC certified vehicles to reduce their emissions
- ✓ Proper tuning of vehicles to keep the gas emissions under check
- ✓ Monitoring to ensure compliance with emission limits would be carried out during operation
- ✓ There is no major source of emissions except emission from combustion of fuels from the Transportation Vehicles and Material Handling.
- ✓ Besides this, to control the emissions further regular preventive maintenance of Equipment / Transportation Vehicles will be carried out on contractual basis.
- ✓ It will be ensured that all transportation vehicles carry a valid PUC certificate.
- ✓ Plantation will be carried out along the approach road, river banks & at all strategic places in the vicinity area.
- ✓ Periodic air quality monitoring will be done to assess the quality and for timely corrective actions.
- ✓ Water sprinkling will be done on the haul roads twice in a day. This will reduce dust emission further.
- ✓ Speed limits will be enforced to reduce airborne fugitive dust from vehicular traffic.
- ✓ Spillage from the trucks will be prevented by covering tarpaulin over the trucks.

# **Anticipated Environmental Impact And Mitigation Measures**

Project: Sand Mining Project (Bhoj Son 39 Sand Ghat) At Riverbed of Son River at Mauja Andhary Mahaji (424) & Imadpur, Anchal- Sahar, District- Bhojpur, Bihar.(Area-24.5 Ha)

#### 4.4 NOISE ENVIRONMENT

The proposed mining activity is semi-mechanized in nature. No drilling & blasting is envisaged for the mining activity. Hence, the only impact is anticipated is due to movement of vehicles deployed for transportation of minerals.

## **Anticipated Impacts:**

- Mental disturbance, stress& impaired hearing.
- Decrease in speech reception& communication.
- Distraction and diminished concentration affecting job performance efficiency.

The noise level in the working environment are compared with the standards prescribed by Occupational Safety and Health Administration (OSHA-USA) which has been adopted and enforced by the Govt. of India through model rules framed under Factories Act, 1980 and CPCB 2000 norms. The summary of the permissible exposures in cases of continuous noise as per above rules is given below:

Table 4.1, Damage risk criteria for hearing loss OSHA regulations

Maximumallowable duration	Sound pressure dB(A)	Remarks
per day in hour		
(1)	(2)	(3)
8.0	90	1. For any period of
6.0	92	exposure falling in
4.0	95	between any figure and
3.0	97	lower figure as
2.0	100	indicated in column
1 ½	102	(1), the permissible
1	105	sound is to be
3/4	107	determined by
1/2	110	extrapolation or
1/4	115	proportionate scale.  2. No exposure in excess of 115 dB (A) is permissible.

# **Anticipated Environmental Impact And Mitigation Measures**

Project: Sand Mining Project (Bhoj Son 39 Sand Ghat) At Riverbed of Son River at Mauja Andhary Mahaji (424) & Imadpur, Anchal- Sahar, District- Bhojpur, Bihar.(Area-24.5 Ha)

Noise at lower levels (sound pressure) is quite acceptable and does not have any bad effect on human beings, but when it is abnormally high- it incurs some maleficent effects.

## a. Mitigation measures

The following measures have been envisaged to reduce the impact from the transportation of minerals:

- The vehicles will be maintained in good running condition so that noise will be reduced to minimum possible level.
- In addition, truck drivers will be instructed to make minimum use of horns in the village area and sensitive zones.
- No such machinery is used for mining which will create noise to have ill effects.
- Awareness will be imparted to the workers about the permissible noise levels & maximum exposure to those levels.

#### 4.5 BIOLOGICAL ENVIRONMENT

Mining which leads to the removal of channel substrate, re-suspension of streambed sediment and stockpiling on the streambed, will have ecological impacts. These impacts may have an effect on the direct loss of stream reserve habitat, disturbances of species attached to streambed deposits, reduced light penetration, reduced primary production, and reduced feeding opportunities. Sand mining generates additional traffic, which negatively impairs the environment.

#### **Anticipated Impacts:**

#### Flora

The proposed project of river bed sand mining shall be carried out on the riverbed of Son River. There are no trees in the project area. The project shall also not lead to any change in land use and will be replenished every year after successive rains. The proposed mining activity, which although is an economically gainful activity, also constitutes river training work. It allows for necessary dredging activity which may otherwise lead to flooding of the valley.

# **Anticipated Environmental Impact And Mitigation Measures**

Project: Sand Mining Project (Bhoj Son 39 Sand Ghat) At Riverbed of Son River at Mauja Andhary Mahaji (424) & Imadpur, Anchal- Sahar, District- Bhojpur, Bihar.(Area-24.5 Ha)

There shall be negligible air emissions or effluents from the project site during loading of the truck. This shall be a temporary effect and not anticipated to affect the surrounding vegetation significantly.

#### Fauna

Animals are sensitive to noise and avoid human territory. The project stretch of the river is not an identified drinking water point for the animals. However, any animal desirous of accessing the river can continue to do so upstream or downstream of the stretch during the mining activities, as there will not be any damming or diverting of water. Hence, no significant impact is anticipated from the proposed project.

#### **Mitigation measures**

As the proposed mining will be carried out in a scientific manner, not much significant impact is anticipated, however, the following mitigation measures will be taken to further minimize it:

#### Flora

Although, the project will not lead to any tree cutting, plantation activities shall be undertaken to improve the vegetation cover of the area. To avoid dust emissions, the mined materials will be covered with tarpaulin during transportation.

#### Fauna

The workers shall be directed to not venture out of the leased area for collecting fuel wood, or hunting. They shall also be trained not to harm any wildlife. No work shall be carried out after sunset.

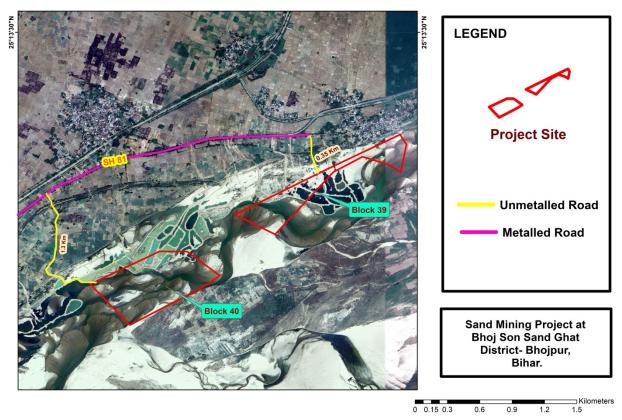

### 4.6 TRAFFIC ANALYSIS

### **Transportation Route:**

The sand extracted will store the nearby storage point. From there sand will be transported to the market. Sand will be stored in to storage point and from there it will be transported in the night time when traffic load is low on nearest SH or NH.

## TRANSPORTATION ROUTE MAP

## FIGURE 4.1 MAP SHOWING EVACUATION ROUTE FOR CLUSTER OF PROJECTS

Traffic analysis is carried out by understanding the existing carrying capacity of the roads near to the project site and the connecting main roads in the area. Then depending on the capacity of the mine, the number of trucks that will be added to the present scenario will be compared to the carrying capacity.

Table 4.2 (i): Existing Traffic Scenario & LOS for Block 39

Road	V	C	Existing V/C Ratio	LOS
State Highway (SH-81)	2500	15,000	0.16	A

Source: Capacity as per IRC: 64-1990

# **Anticipated Environmental Impact And Mitigation Measures**

V= Volume of Vehicles in PCU's/day & C= Capacity of Road in PCU's/day

The existing Level of Service (LOS) is "A" & "B" i.e. excellent & very good.

V/C	LOS	Performance
0.0 - 0.2	A	Excellent
0.2 - 0.4	В	Very Good
0.4 - 0.6	С	Good / Average / Fair
0.6 - 0.8	D	Poor
0.8 - 1.0	Е	Very Poor

Reference: ENVIS Technical Report, IISc, Bangalore.

During Mine operation for Sand Block 39

Proposed Capacity of Mine/annum : 749700 TPA

No. of working days : 250 days

Proposed Capacity of mine/day : 2999

Truck Capacity : 16 tonnes

No. of trucks deployed/day : 187.42 or 188

Increase in PCU/day (188\*3) : 564

Table 4.2 (ii): Modified Traffic Scenario & LOS

Road	V	С	Modified V/C Ratio	LOS
State Highway (SH-81)	2500+564=3064	15000	0.20	В

#### **Results**

From the above analysis it can be seen that the LOS has changed from 0.16 to 0.20 at Highway intersection that is from 'A' to 'B' i.e from Excellent' to 'Very Good' respectively. Hence, there will not so much adverse affect on the proposed evacuation roads due to additional traffic. Traffic management has been proposed as given in below

#### **Traffic Management:**

- 1. Roads will be repaired regularly and maintained in good conditions.
- 2. Haul roads will be sprinkled with water to keep the dust suppressed.

# **Anticipated Environmental Impact And Mitigation Measures**

Project: Sand Mining Project (Bhoj Son 39 Sand Ghat) At Riverbed of Son River at Mauja Andhary Mahaji (424) & Imadpur, Anchal- Sahar, District- Bhojpur, Bihar.(Area-24.5 Ha)

- 3. A supervisor will be appointed to regulate the traffic movement near the site.
- 4. Speed breakers will be constructed near accident prone areas to calm the traffic and its speed.

#### TRAFFIC MANAGEMENT FOR PROJECTS IN CLUSTER

Road	V	С	Modified V/C Ratio	LOS
State Highway (SH-81)	2500+6222=13654	15000	0.41	C

#### **Results**

From the above analysis it can be seen that the LOS has changed from 0.16 to 0.41 at Highway intersection that is from 'A' to 'C' i.e from Excellent' to 'Very Poor' respectively, as per classification. Hence, there will not so much adverse affect on the proposed evacuation roads due to additional traffic. Traffic management has been proposed as given below.

## **Traffic Management:**

- 5. Roads will be repaired regularly and maintained in good conditions.
- 6. Haul roads will be sprinkled with water to keep the dust suppressed.
- 7. A supervisor will be appointed to regulate the traffic movement near the site.
- 8. Speed breakers will be constructed near accident prone areas to calm the traffic and its speed.

\*\*\*\*\*\*

#### 5.0 ANALYSIS OF ALTERNATIVE TECHNOLOGY AND SITE

#### 5.1 Site Alternatives under Consideration

Presence of sand for commercial exploitation has been identified based on the result of geological investigations and exploration. The mining projects are site specific as such alternate sites were not considered.

### 5.2 Analysis of Alternative Technology

### 5.2.1 Choice of Method of Mining

Factors in the choice of an actual mining method for a given deposit are deposit characteristics, requirement of health and safety and environmental concerns, production, scheduling scope of mechanization, workforce requirements wage rates, replenishment, operating and capital cost estimates. The selection of the mining method (development and extraction) is a key decision to be made in the opening up of a mine.

Surface or open cast mining is used for large, near-surface mineral deposits. Mineral is exploited, loaded into trucks, and hauled to a market.

The opencast mining method will be adopted because of the following reasons:

- The opencast mining operations ensure higher mineral conservation.
- Replenishment

The method used for mining is efficient for sand mining, so no alternative mining method is proposed.

\*\*\*\*\*

## ENVIRONMENTAL MONITORING PROGRAMME

Project: Sand Mining Project (Bhoj Son 39 Sand Ghat) At Riverbed of Son River at Mauja Andhary Mahaji (424) & Imadpur, Anchal- Sahar, District- Bhojpur, Bihar.

#### 6.0 INTRODUCTION

Regular monitoring of the various environmental parameters is necessary to evaluate the effectiveness of the management programme so that the necessary corrective measures can be taken in case there are some drawbacks in the proposed programme. Since environmental quality parameters at work zone and surrounding areas are important for maintaining sound operating practices of the project in conformity with environmental regulations, the post project monitoring work forms part of Environmental Monitoring Program.

Environmental Monitoring Program will be implemented once the project activity commences. Environmental monitoring program includes (i) Environmental surveillance, (ii) analysis & interpretation of data, (iii) Preparation of reports to support environmental management system and (iv) Organizational set up responsible for the implementation of the programme.

#### 6.1 ENVIRONMENTAL MONITORING AND REPORTING PROCEDURE

Monitoring shall confirm that commitments are being met. This may take the form of direct measurement and recording of quantitative information, such as amounts and concentrations of discharges and wastes, for measurement against corporate or statutory standards, consent limits or targets. It may also require measurement of ambient environmental quality in the vicinity of a site using ecological/biological, physical and chemical indicators. Monitoring may include socio-economic interaction, through local liaison activities or even assessment of complaints.

The preventive approach to environment management may also require monitoring of process inputs, for example, type and method used, resource consumption, equipment and pollution control performance etc.

The key aims of environment monitoring are:

1. To ensure that results/ conditions are as forecast during the planning stage, and where they are not, to pinpoint the cause and implement action to remedy the situation.

## ENVIRONMENTAL MONITORING PROGRAMME

Project: Sand Mining Project (Bhoj Son 39 Sand Ghat) At Riverbed of Son River at Mauja Andhary Mahaji (424) & Imadpur, Anchal- Sahar, District- Bhojpur, Bihar.

- 2. To verify the evaluations made during the planning process, in particular with risk and impact assessments and standard & target setting and to measure operational and process efficiency.
- 3. Monitoring will also be required to meet compliance with statutory and corporate requirements.
- 4. Finally, monitoring results provide the basis for auditing i.e. to identify unexpected changes.

#### 6.2 MONITORING METHODOLOGIES AND PARAMETERS

#### Air quality monitoring

Air Quality monitoring is essential for evaluation of the effectiveness of abatement programmes and to develop appropriate control measures. Suspended Particulate Matter (SPM), Sulphur Dioxide (SO<sub>2</sub>) and Nitrogen Dioxide (NO<sub>2</sub>) will be monitored at the workplace i.e. core zone. The methodology proposed for is shown below:

Table 6.1, Monitoring methodologies and parameters

Parameters	Technique	Technical Protocol	
PM <sub>10</sub>	Gravimetric method	IS 5182 (Part-XXIII)	
Sulphur Dioxide	Improved West and Gaeke	IS-5182 (Part-II)	
Nitrogen Dioxide	Modified Jacob & Hochheiser	IS-5182 (Part-VI)	

#### Water quality monitoring

Water quality monitoring involves periodical assessment of quality of surface water and the ground water near the mining project.

- Surface water samples will be analyzed for all the parameters as per EPA, 1986
- Ground water samples will be analyzed for all the parameters as per IS-10500:2012.

## ENVIRONMENTAL MONITORING PROGRAMME

Project: Sand Mining Project (Bhoj Son 39 Sand Ghat) At Riverbed of Son River at Mauja Andhary Mahaji (424) & Imadpur, Anchal- Sahar, District- Bhojpur, Bihar.

#### **Soil quality monitoring**

The soil quality monitoring is carried out to assess the soil characteristic. The soil quality will be analyzed as per CPCB norms.

### **Noise level monitoring**

Noise level monitoring will be done for achieving the following objectives:

- a) To compare sound levels with the values specified in noise regulations
- b) To determine the need and extent of noise control of various noise generating sources

Noise level monitoring will be done at the work zone to assess the occupational noise exposure levels. Noise levels will also be monitored at the noise generating sources like mineral handling arrangements, vehicle movements and also at the nearest village for studying the impact due to higher noise levels for taking necessary control measures at the source.

## **Socio-economic Survey**

Socio economic condition will be monitored to assess the demographic particulars of the area including the impacts on the social & economical condition on the residents nearby.

#### **Plantation Monitoring Programme**

Plantation monitoring will be done to ensure survival & growth rate of plantations.

#### 6.3 MONITORING SCHEDULE

The schedule has been shown below for the parameters proposed for monitoring.

Table 6.2, Details of monitoring schedule

S.No.	Description of Parameters	Schedule of Monitoring
1	Air Quality	24 hourly samples twice/Thrice a week in each season except monsoon
2	Water Quality (Surface & Groundwater)	Once a season for 4 seasons in a year
3	Soil Quality	Once in a year in project area

## ENVIRONMENTAL MONITORING PROGRAMME

Project: Sand Mining Project (Bhoj Son 39 Sand Ghat) At Riverbed of Son River at Mauja Andhary Mahaji (424) & Imadpur, Anchal- Sahar, District- Bhojpur, Bihar.

4	Noise Level	Twice a year for first two years & then once a
		year
5	Socio-economic Condition	Once in 3 years
6	Plantation Monitoring	Once in a season

#### 6.4 MONITORING SCHEDULE - IMPLEMENTATION

An implementation programme has been prepared as it serves no purpose if it is not implemented in letter and spirit.

Implementation of proposed control measures and monitoring programme has an implication on mining site as well as on the surrounding area. Therefore, mine management should strengthen the existing control measures as elaborated earlier in this report and monitor the efficacy of the control measures implemented in the entire study area:

- a) Collection of air and water samples at strategic locations with frequency suggested and by analyzing thereof. If the parameters exceed the permissible tolerance limits, corrective regulation measure will be taken.
- b) Collection of soil samples at strategic locations once every two years and analysis thereof with regard to deleterious constituents, if any.
- c) Measurement of water level fluctuations in the nearby ponds dug wells and bore wells and to assess if mining has got any impact on it or not.
- d) Measurement of noise levels at mine site and adjacent villages will be done twice a year for first two years and thereafter once a year.
- e) Post plantation, the area will be regularly monitored in every season for evaluation of success rate. For selection of plant species local people should also be involved.

An Environmental Management Cell (EMC) is envisaged which will be responsible for monitoring EMP and its implementation. EMC members should meet periodically to assess the progress and analyze the data collected during the month.

#### 6.5 BUDGET ALLOCATION FOR MONITORING

The EMC will be responsible to carry on the monitoring. Budget allotment has also been proposed for the same:

## ENVIRONMENTAL MONITORING PROGRAMME

Project: Sand Mining Project (Bhoj Son 39 Sand Ghat) At Riverbed of Son River at Mauja Andhary Mahaji (424) & Imadpur, Anchal- Sahar, District- Bhojpur, Bihar.

Table 6.3, Budget for monitoring

S. No. Description		Cost to be incurred		
		(in lakhs/annum)		
1	Water Quality (Surface & Groundwater)	1.0		
2	Soil Quality	0.50		
3	Air Quality	1.0		
4	Noise Level	0.5		
5	Plantation Monitoring	0.5		
6	Socio-economic Condition	0.5		
1	TOTAL	4.0		

#### 6.6 REPORTING SCHEDULES OF THE MONITORING DATA

It is proposed that voluntary reporting of environmental performance with reference to the EMP should be undertaken. The environmental monitoring cell shall co-ordinate all monitoring programmes at site to furnish the data to the State regulatory agencies regularly in respect of the stipulated prior environmental clearance terms and conditions. The proponent shall prominently advertise in the newspapers indicating that the project has been accorded environmental clearance and also the details of website where it is displayed.

\*\*\*\*\*

#### 7.0 PUBLIC CONSULTATION

This is Draft EIA report public hearing is yet to be conducted.

#### 7.1 HAZARD IDENTIFICATION AND RISK ASSESSMENT METHODOLOGY

Risk is to expose someone or something to danger, harm or loss. The different steps of risk assessment procedure are as given below:

#### Step I: Hazard Identification

The purpose of hazard identification is to identify and develop a list of hazards for each job in the organization that are reasonably likely to expose people to injury, illness or disease if not effectively controlled. Workers can then be informed of these hazards and controls put in place to protect workers prior to them being exposed to the actual hazard.

#### **Step II: Risk Assessment**

Risk assessment is the process used to determine the likelihood that people exposed to injury, illness or disease in the workplace arising from any situation identified during the hazard identification process prior to consideration or implementation of control measures.

Risk occurs when a person is exposed to a hazard. Risk is the likelihood that exposure to a hazard will lead to injury or health issues. It is a measure of probability and potential severity of harm or loss.

#### **Step III:Risk Control**

Risk control is the process used to identify, develop, implement and continually review all practicable measures for eliminating or reducing the likelihood of an injury, illness or diseases in the workplace.

#### **Step IV: Implementation of risk controls**

All hazards that have been assessed should be dealt in order of priority in one or more of the following hierarchy of controls

The most effective methods of control are:

- ✓ Elimination of hazards.
- ✓ Substitute something safer.
- ✓ Use engineering/design controls.

- ✓ Use administrative controls such as safe work procedures.
- ✓ Protect the workers i.e. by ensuring competence through supervision and training, etc.

Each measure must have a designated person assigned for the implementation of controls. This ensures that all required safety measures will be completed.

#### **Step V: Monitor and Review**

Hazard identification, risk assessment and control are an on-going process. Therefore regularly review the effectiveness of your hazard assessment and control measures. Make sure that you undertake a hazard and risk assessment when there is change to the workplace including when work systems, tools, machinery or equipment changes. Provide additional supervision when the new employees with reduced skill levels or knowledge are introduced to the workplace.

#### A) RISK ANALYSIS

The risk assessment portion of the process involves three levels of site evaluation:

- a) Initial Site Evaluation,
- b) Detailed Site Evaluation,
- c) Priority Site Investigations and Recommendations.

The risk assessment criteria used for all levels of site evaluation take into account two basic factors:

- The existing site conditions
- The level of the travelling public's exposure to those conditions.

The Initial Site Evaluation and Detailed Site Evaluation both apply weighted criteria to the existing information and information obtained from one site visit. The Initial Site Evaluation subdivides the initial inventory listing of sites into 5 risk assessment site groups. The Detailed Site Evaluation risk assessment is then performed on each of the three highest risk site groups in order of the group priority level of risk. The result of the Detailed Site Evaluation process is a prioritized listing of the sites within each of the three highest risk site groups.

#### Risk analysis is done for:

Forecasting any unwanted situation

- Estimating damage potential of such situation
- Decision making to control such situation
- Evaluating effectiveness of control measures

Table 7.1, Risk Likelihood Table for Guidance

Step 1: Assess the Likelihood				Step 2: Assess the Consequences		
L1	Happens every	Almost	Common or	<b>C1</b>	Fatality	Catastrophic
	time we	Certain	repeating			
	operate		occurrence			
L2	Happens	Likely	Known to have	C2	Permanent	Major
	regularly		occurred "has		disability	
	(often)		happened"			
L3	Has happened	Possible	Could occur or	C3	Medical/hospita	Moderate
	(occasionally)		"heard of it		l or lost time	
			happening"			
L4	Happens	Unlikely	Not likely to	C4	First aid or no	Minor
	irregularly		occur		lost time	
	(almost never)					
L5	Improbable	Rare	Practically	C5	No injury	Insignificant
	(never)		impossible			

A logical systematic process is usually followed during a qualitative risk assessment to identify the key risk events and to assess the consequences of the events occurring and the likelihood of their occurrence Table 7.2

Table 7.2, Qualitative Risk Assessment

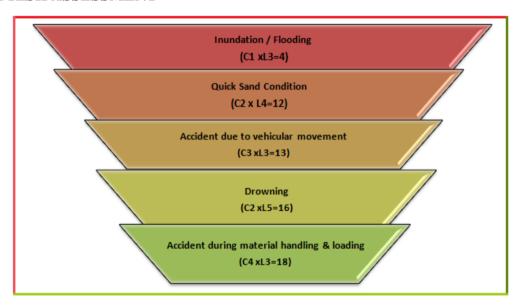

Risk Rank	L1	L2	L3	L4	L5
Likelihood Consequence	Almost certain	Likely	Possible	Unlikely	Rare
C1					
Catastrophic	1	2	4	7	11
C2					
Major	3	5	8	12	16
C3	6	9	13	17	20

Moderate					
C4					
Minor	10	14	18	21	23
C5					
Insignificant	15	19	22	24	25

#### **RISK RATING:**

HIGH RISK 1-6	MEDIUM RISK 7-15	LOW RISK	16-25	
				4

#### 7.2 RISK ASSESSMENT

There are various factors, which can create unsafe working conditions/hazards in mining of minor minerals from bed of river.

The key risk(hazard x probability) event rating associated with sandmining and to assess its consequences of such events occurring and the likelihood based on above Table 7.1 (ii) are as:-

TheRisk rating of such hazards is as follows:

#### 7.2.1 INUNDATION/FLOODING

The risk rating assigned to this activity is assigned as '4' i.e., it is possible and will have catastrophic with major consequences, if work started without assessment of the *river* condition especially during monsoon season.

Inundation or flooding is expected and beneficial for these mines as during this time only the mineral reserve gets replenished.

### Measures to prevent consequences of inundation/flooding

Inundation of flooding is expected and beneficial for these mines as during this time only the mineral reserve gets replenished.

- 1. During monsoon months and heavy rains the mining operations are ceased.
- 2. There should be mechanism/warning system of heavy rains and discharges from the upstream dams.

#### 7.2.2 Quick Sand Condition

The risk rating assigned to this activity is assigned as '12' i.e., it is an unlikely event with major consequences as frequency of this risk is less likely to occur.

Two things may create the conditions to form quicksand. Underground water may seep-up and saturate the sand, thereby reducing the friction between the sand grains and giving the sand a liquid nature. Or, sand or another soil may be sifted by the force of an earthquake so that friction is lessened and the earth becomes unsteady.

This creates danger condition to the trucks plying near the *river* and banks for transportation of minerals.

#### **Measures to Prevent Quick Sand Condition**

- 1. The only way to avoid quick sand condition is by avoiding mineral lifting below water table.
- 2. Mining will be done in layers rather than going for maximum depth at one time.

#### 7.2.3 ACCIDENT DUE TO VEHICULAR MOVEMENT

The risk rating assigned to this activity is assigned as '13' i.e., it is possible event with moderate consequences as frequency of this operation is more but the predicted/assumed intensity is less like minor cuts, bodily injury. The possibilities of road accidents are due to reckless or untrained driver or overloading of trucks or in case pathway is not compacted suitably, etc.

#### **Measures to Prevent Accidents during Transportation**

- 1. All transportation within the main working should be carried out directly under the supervision and control of the management.
- The Vehicles will be maintained/repaired and checked thoroughly by the competent person.
- 3. A statutory provision of constant education, training etc. will go a long way in reducing the incidents of such accidents.
- 4. Overloading will not be permitted and will be covered with tarpaulin.
- 5. The maximum permissible speed limit will be ensured.
- 6. The truck drivers will have valid driving license.

#### 7.2.4 DROWNING

The risk rating assigned to this activity is assigned as '16' i.e., it is a rare accident but will have major consequences, if occurred. This may occur due to flash floods etc due to which the workers at the site may get seriously injured or drowned.

#### **Measure to Prevent Drowning**

- 1. The mining will be done under strict supervision and only in the dry part of the *river*.
- 2. Mining will be completely stopped in monsoon season to avoid such accidents.
- 3. Deep water areas will be identified and 'No Go Zones' will be clearly marked and made aware to the mine workers.

## 7.2.5 ACCIDENT DURING MATERIAL HANDLING & LOADING

The risk rating assigned to this activity is assigned as '18' i.e. it is possible event with minor consequences", as frequency of this operation is more but the predicted/assumed intensity is less like minor cuts, abrasion, etc. may be due to bank of *river*collapse, over thrown boulders/pebbles, injuries due to carelessness use of hand tools, etc.

## Measures to Prevent Accidents during material handling & loading

- 1. The truck should be brought to a lower level so that the loading operation suits to the ergonomic condition of the workers.
- 2. The loading should be done from one side of the truck only to avoid over throw of materials.
- 3. The workers should be provided with gloves and safety shoes during loading.

All the activities will be done under strict supervision/control to avoid anticipated accidents so that the risk is reduced to a level considered **As Low As Reasonably Practicable (ALARP)** conditions which are adequately safe and healthy.

#### 7.3 DISASTERS & ITS MANAGEMENT

#### 7.3.1 Anticipated Disaster

- **1. Floods**: Most of the areas of this district are flood prone owing to the presence of seasonal rivers. Rivers and its tributaries cause heavy losses to the human lives, livestock, land and property mainly due to flash floods. Hence no mining has been proposed during monsoon and flood alerts will be given, if any.
- **2. Earth Quake**: Bhojpur District like other areas of Bihar is moderately vulnerable to earthquake as it exists in Zone IV. However the vulnerability to damage near the site is quite low as there are no built in structures at the site.
- 3. Drought: due to deficiency in rainfall prime reasons of recurring drought in Bihar is the nature of soil with low mineral and humus-contents besides extremely poor water holding capacity. Recurrent rainfall variability and sustained departure from the normal rainfall vis-a-vis low reliability, fluctuating both surface and underground water resources and extremely poor water holding capacity of the major soil group appear to have clubbed together to cause frequent droughts in Bihar. Besides, there is a positive relationship between reducing forest land and the increasing rainfall variability and the phenomenon is well manifested in Bihar scenario of recurrent droughts.

## 7.3.2 Disaster Management Plan & Strategy

The Disaster Management Plan has three components:

### (A) Risk Analysis and Vulnerability Assessment:

The Risk Analysis and Vulnerability Assessment depict the present picture for each disaster-exposure, loss of life, property damage, etc. It also shows geographic distribution of each hazard. The various monitoring facilities, regulatory regimes, countermeasures available for each disaster are identified and listed.

#### (B) Response Plan:

The response plan presents an organizational structure of the District to effectively handle the disaster in a coordinated and quickest possible manner to mitigate the impact of

disaster. It identifies functional areas such as relief, restoration, communication, information, transport, emergency health services etc and proposes assignments to various departments; including identifying lead and supporting departments. The response plan also lays down preparedness checklists and standing operating procedure (SOP) guidelines.

## (C) Mitigation Strategy:

The mitigation strategy and plan focus on the long-term planning for impact reduction. It deals with the issues of continued commitment to hazard identification and risk assessment, applied research and technology transfer, investment- incentives for mitigation, and leadership and co-ordination for mitigation.

The mine management will be in regular contact with the District administration to gather information on natural disasters and will pass on the message at the site to avoid any loss of health or wealth due to impending disasters.

Though the responsibility of disaster management is vested with the center and state Governments, it is extremely difficult for them to deal effectively all the aspects of disaster management according to the needs of the affected people.

Thus disaster management plan of the Bhojpur District has been prepared through incorporation of the features of Community Based Disaster Management and involvement of local governments, Municipalities etc.

# 7.4 SOCIO-ECONOMIC IMPACT OF THE PROJECT & SAFETY MEASURES INTRODUCTION

Socio-Economic Impact Assessment (SEIA) refers to systematic analysis of various social and economic characteristics of human being living in a given geographical area during a given period. The geographical area is often called Study Area or Impact Area. SEIA is carried out separately but concurrently with Environment Impact Assessment (EIA). The study area consists of core area where the project is located and a buffer area encircling the project area with a radius of 10 km from the periphery of the core area. For every new project or existing project under expansion or tied for modernization or change in product mix, Socio-economic Impact Assessment is mandatory. The Socio-economic impact assessment focuses the effect of the project on social and economic well-being of the

community. The impact may be direct or indirect. Further, the impact may be positive or negative.

#### **OBJECTIVES OF SEIA**

The prime objective of the current study is to assess the impact of the proposed mining project on socio-economic characteristics of people living in the neighborhoods. Further, it is to be established whether the impending impact would be direct or indirect. Furthermore, it is to be examined whether the said impact would be positive or negative. Lastly, it is to be comprehended if the impact is positive how long it would sustain or if it is negative how soon the same could be eased.

#### **SCOPE**

The Scope of the study is as follows:

- a) To collect baseline data of the study area
- b) To comprehend socio-economic status of the people living in the study area.
- To assess probable impact of the project on social and economic aspects in the study area.
- d) To measure the impact of the project on Quality of life of the people living in the study area.
- e) To ensure sustainability of positive impact.
- f) To suggest mitigation measures and agency responsible for taking action in case of adverse impact.

#### SOCIO-ECONOMIC IMPACT OF THE PROJECT

#### Impact on Demographic Composition

The proposed Projectwill hardly make any difference in the demographic composition of the study area as the additional employment it envisages to create will be met locally to the maximum extent. Hence, the chances of in-migration of people from outside the study area are remote. Accordingly, there will be no variation in the total population of the study area including that of sex ratio, when the mine starts operating.

#### **Employment Opportunities**

The proposed Project will provide employment to the local people. The number of workers to be deployed in the mining project will depend upon the quantity of minerals to be extracted from the mine by the lease holder. Both the miners and the unskilled workers will be recruited locally. It has estimated that around 44 people will get employment in this mining project for a period of ten months in a year. It is a positive impact of the project since it is providing employment opportunities to the local people. The project will not affect the vulnerable groups of people.

#### Increased supply of sand in the market

The demand for minerals is ever increasing with the growth of the infrastructure development in our country. Both Government departments and private developers have taken up construction of roads, bridges and buildings in a big way. The requirement for the building materials is always high and there is already an acute shortage of sand in the market and the construction industry is the main sufferer. With the commencement of the proposed mining project the supply of minerals will increase and the gap between demand & supply will decrease to some extent, if not fully.

### Impact on agriculture

It is non-forest land and the proposed activity is to take place in the bed of the Son River. There will be no negative impact on agriculture as no cultivation is taking place on the proposed mining area. Since, scientific mining will be adopted in the proposed mining project the area will be free from annual floods, which destroy standing crops and land & property. This is a positive impact of the proposed mining project.

#### Impact on road development

Movement of trucks and other vehicles to and fro the mining site is expected to increase, when mining will start. The existing roads are connecting the quarry with the national highway connected by metalled followed by un-metalled roads. Hence, there is need for road maintenance and repairing regularly in the mining area. Further, there are risks of accidents during loading of extracted minerals into trucks and transportation to markets for sells. However, accidents can be avoided by taking due care and precautions.

#### **Income to Government**

The proposed mining activity will benefit the State in the form of royalty, dead rent, fees and earnings from taxes.

#### Impact on Law & Order

As most of the workers to be employed in the proposed mining project are local residents no law & order problem is envisaged. It is expected that the workers will attend to their duties from their residence and return to their homes after the day's work. There would have been law & order problem if the workers were migrants and lived in shanties closed to the mining area. However, to meet any untoward incident one police post may be set up closed to the mining site.

## Impact on Health

There are no chances of occurring diseases, due to mining. The minerals excavated are non-toxic. To avoid respiratory problem from dust necessary protection should be taken.

#### Few safety measures are outlined below:

- a) Safe Working Environment: The project proponent shall ensure health and safety of all the employees at work. Efforts will be made to provide and maintain a safe work environment and ensure that the machinery and equipment in use is safe for employees. Further, it will be ensured that working arrangements are not hazardous to employees.
- b) Provision of First Aid: The first aid treatment reflects the hazards associated with the mining of minerals. The first-aiders will be well trained in handling patients working in the Project.
- c) **Regular Health Examination:** For all mine workers regular health examination will be made compulsory. Treatment of serious back injury; existing asthma or respiratory diseases, existing skin diseases, lung function test (pre and post ventolin), Audiograms, Chest X- ray etc. will also be taken care of.
- d) Health Education: Adequate health education and information related to the job will be provided to the workers. Baseline health information will be recorded for future references.
- e) **Tie-up with the Nearest Hospital for Medical Assistance:** To meet the medical needs of the mine workers tie-up with nearest hospitals will be made. Efforts will be

made to reserve few beds in the above hospitals for the workers of the mining project. This will ensure timely medical aid to the affected persons.

- f) Supply of Mask and Gloves: The workers in the Sand mining project are subject to respiratory diseases. For protection from dust it will be made compulsory for all workers to wear masks and gloves, while working in the mine.
- g) **Administration of Anti-venom Injections:** Provision of Anti-venom therapy will be made available for administration to the workers in case of snake, spider and insect bites, while working in the mine.
- h) **Special Telephone Number:** A special telephone number will be made available to the workers in case of emergency so that they can dial the same for–medical assistances. Further, efforts will be made to provide vehicles to the patients in short duration for shifting to a hospital.
- i) **Special Group Insurance Scheme:** All the mine workers will be covered under a Group Insurance Scheme of LIC or any other Insurance company.

#### **CONCLUSION**

The commissioning of the Sand Mining Project (Bhoj Son 39 Sand Ghat) At Riverbed of Son River at Mauja Andhary Mahaji (424) & Imadpur, Anchal- Sahar, District- Bhojpur, (Bihar) provides employment to local people who are in search of the same. The granting of environment clearance to make mining of sand legally valid and it will generate revenue for the state. It is expected that prospective entrepreneurs will venture to set up industrial units in the vicinity in the near future making the area a mixed society, dependent on industry, trade and business. With the implementation of the project the occupational pattern of the people in the area will change making more people engaged in mining, industrial and business activities rather in agriculture only. The study area is still lacking in health and educational facilities. It is expected that same will improve to a great extent with opening of the project and associated industrial & business activities.

\*\*\*\*\*

#### 8.0 GENERAL

Various benefits are envisaged while planning for the mining of sand from Son River Bed. Sand is very important minor mineral and is the principal raw material for meeting the huge demand of construction material required in building construction and infrastructure works, road material for construction and maintenance of roads / highway; elastic ballast material for rail tracks in the State of Bihar & and nearby cities and towns of Bihar. The natural available materials in shoal deposits of Son River bed quarry site have been found suitable from techno-economic consideration.

#### 8.1 PHYSICAL BENEFITS

The opening of the proposed project will enhance the following physical infrastructure facilities in the adjoining areas.

- a. **Road Transport:** There will be improved road communication due to the proposed project and maintenance will also be done time to time.
- b. **Market:** Generating useful economic resource for construction. Excavated minor mineral sand will provide a good market opportunity.
- c. **Enhancement of green cover:** As a part of reclamation plan, plantation will be carried along the river banks or along the road sides or near the civic amenities.
- a. **Creation of community assets** (infrastructure) like provision for drinking water, construction of school buildings, village roads/ linked roads, dispensary & health centre, community centre, market place etc, as a part of corporate social responsibility.

# 8.2 SOCIAL BENEFITS

- a) Increase in Employment Potential due to the project activity: Employment opportunities will increase both directly as well indirectly.
- b) **Contribution to the Exchequer** as the saleable minerals will be given royalty. Since the quarries will be leased out to successful allottees, mining operation in the state will get legalized and it will fetch income to the state exchequer.
- c) **Increased Health related activities**: Healthcare promotional activities will be undertaken. Pre-placement & and Periodic medical checkups will be done, which will lift the general health status of the residents of the area. Health camps, medical aids, family welfare programs, immunization camp, sports will be arranged.

Table-8.1, Budget for Public Health

S. No.	Activities recommended for	Tentative cost
	communities level services	(Lakh Rs) For Each Mine
1	Awareness campaigns regarding health issues in the nearby villages.	1.0
2	Provide free health checkups & medicines to the nearby villagers of the project site.	1.0
3	Assistance to set up a temporary health center during the lease tenure.	0.50
	Total	2.5

- d) **Educational attainments**: Educational activities will be promoted by the lessee. Awareness program will be arranged covering basic issues related to primary level education, environment, health and hygiene etc.
- e) **Strengthening of existing community** facilities through the Community Development Programme.

Table 8.2, Budget for Occupational Health

Particulars	Recurring Cost per year (Rs.) For Each Mine	
For routine checkup	1,00,000	
Medical aid as per ESI Scheme	2,00,000	
Training	1,00,000	
Total	4,00,000	

#### 8.3 ENVIRONMENTAL BENEFITS

- a. Protection of banks
- b. Reducing submergence of adjoining agricultural lands due to flooding.
- c. Reducing aggradations of river level.
- d. Protection of crops being cultivated along the bank.
- e. A check on illegal mining activity.

#### 8.4 CORPORATE ENVIRONMENTAL RESPONSIBILITY

2% of capital cost of the project cost will be allotted for the Corporate Environmental Responsibility as per OM dated 1st May 2018. The following has been proposed considering the needs & demand of the people.

CER cost will be 2% of the total project cost. This amount will be used for social welfare. CER COST is Rs.16,25,35,000/-x 2% = Rs.32,50,700/-.

For each activity the funds to be earmarked by the proponent will be decided after discussion with the local authority/people and the beneficiaries during Public Hearing. It has been planned to undertake a concurrent evaluation of the activities to be taken up under the CER programme.

\*\*\*\*\*\*

#### 9.0 INTRODUCTION

The environmental management must be integrated into the process of mine planning so that ecological balance of the area is maintained and adverse effects are minimized. The Environmental Management Plan (EMP) consists of a set of monitoring programme, mitigation measures, and management control strategies to minimize adverse environmental impacts.

The EMP has therefore been made considering implementation and monitoring of environmental protection measures during and after mining operations. Measures to be taken for each of the impact areas are detailed in the following paras:

#### 9.1 ENVIRONMENTAL MANAGEMENT CELL (EMC)

It is imperative to establish an effective organization to implement, maintain, monitor and control the environmental management system. A separate Environmental Management Cell (EMC) will be formed to look after the environment related matter of the mine. The structure of EMC is as follows:

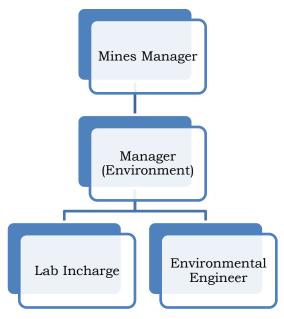

Figure 9.1 Environment Management Cell

The EMC will perform the following activities:

# **ENVIRONMENTAL MANAGEMENT PLAN**

Project: Sand Mining Project (Bhoj Son 39 Sand Ghat) At Riverbed of Son River at Mauja Andhary Mahaji (424) & Imadpur, Anchal- Sahar, District- Bhojpur, Bihar

- EMC will oversee that environmental control measures are implemented as per the plan.
- EMC will ensure ambient Field monitoring like air monitoring, meteorological monitoring and noise monitoring in coordination with outside agencies.
- Coordinating the environment related activities within the organization as well as with outside agencies.
- Reporting the status report to the statutory authorities.
- Systematically document and record keeping w.r.t. environmental issues.
- Plantation and their maintenance
- Collection statistics of health of workers and population of surrounding villages.
- Environmental compliance to the regulatory authorities.
- Communication with the concerned department on the environmental issue.
- Monitoring the progress of implementation of environmental management programme.

#### 9.2 AIR POLLUTION CONTROL MEASURES

During the course of sand mining, no toxic substances are released into the atmosphere, so there seems to be no potential threat to health of human beings. In river bed mining activities, dust will be generated during mining, loading and transportation. The only source of fugitive gaseous emission during mining is vehicles which will be used for transportation. The environmental management for air pollution control includes:

- Plantation will be done along the road-sides and also the vacant land present under Gram Panchayat after consultation with local villagers/authority.
- Dust mask provided to the workers engaged at dust generation points like excavations, loading and unloading points.
- The only air pollution sources are the road transport network of the trucks. The dust suppression measures like water spraying will be done on the roads.
- Utmost care will be taken to prevent spillage of sand and stone from the trucks.

# ENVIRONMENTAL MANAGEMENT PLAN

Project: Sand Mining Project (Bhoj Son 39 Sand Ghat) At Riverbed of Son River at Mauja Andhary Mahaji (424) & Imadpur, Anchal- Sahar, District- Bhojpur, Bihar

- Water sprinkling will be done to reduce the emission of dust due to transportation of minerals.
- Overloading will be prevented. The trucks/ tractor trolley will be covered by tarpaulin covers.
- Plantation activities in consultation with village Panchayat along the roads will also reduce the impact of dust in the nearby villages.

#### 9.3 WATER POLLUTION CONTROL MEASURES

During the operational phase of mine no waste water or industrial effluent will be generated. The environmental management for water pollution control includes:

- Water requirements for drinking, plantation and dust suppression will be met by tanker supply on the daily basis.
- Local people will be employed and no permanent housing will be done so no permanent drainage pattern for sewerage system is required as domestic sewage shall be disposed off into septic tank followed by soak pits.
- Mining in the area will be done up to depth of 3.0mmaximum from the surface level well above the ground water table, therefore impact on water regime is not anticipated.
- Monitoring of water quality of nearby surface water, ground water and domestic water will be conducted once in every season except monsoon to evaluate the performance of the mitigation measures.

# 9.4 NOISE POLLUTION CONTROL MEASURES

As there will be no heavy earth moving machinery there will not be any major impact on noise level due to sand mining and other association activities a detailed noise survey has been carried out and results were cross referenced with standards and were found to be well within limits. Blasting technique is not used for sand mining hence no possibility of land vibration. It was found that the proposed mining activity will not have any significant impact on the noise environment of the region. The only impact will be due to transportation of sand and by excavator involve trucks and tractor trolleys.

# ENVIRONMENTAL MANAGEMENT PLAN

Project: Sand Mining Project (Bhoj Son 39 Sand Ghat) At Riverbed of Son River at Mauja Andhary Mahaji (424) & Imadpur, Anchal- Sahar, District- Bhojpur, Bihar

- Proper maintenance of all machines is being carried out, which help in reducing generation of noise during operations.
- No other equipments accept the Transportation vehicles and Excavator and Loaders (as and when required) for loading is allowed.
- Noise generated by these equipments is intermittent and does not cause much adverse impact.
- Periodical monitoring of noise will be done to adopt corrective actions wherever needed.
- Plantation will be taken up along the approach roads. The plantation minimizes propagation of noise and also arrests dust.

#### 9.5 BIOLOGICAL ENVIRONMENT

Although, there are no significant adverse impacts from the project, the following measures are proposed to minimize anticipated impacts:

- It will be ensured that no mining activity will be carried out during the monsoon season to minimize impact on aquatic life which is mainly breeding season for many of the species.
- As the mining site has no vegetation, no clearance of vegetation will be done.
- Prior to closure of mining operations / during the rainy season the eroded bank will be restored / reclaimed to minimize negative impacts on aquatic habitats.
- Sprinkling will be done on the haul roads with water to avoid the dust emission, thus avoiding damage to the crops.
- Mining will be carried out on the dry part of the lease area to avoid disturbance to the aquatic habitat and movement of fish species.
- No discard of food, polythene waste etc. will be allowed in the lease area which would distract/attract the wildlife.
- No night time mining will be allowed which may catch the attention of wild life.
- Workers will be made aware of the importance of the wildlife and signage will be displayed at the sensitive areas to caution the workers & other passerby.

# ENVIRONMENTAL MANAGEMENT PLAN

Project: Sand Mining Project (Bhoj Son 39 Sand Ghat) At Riverbed of Son River at Mauja Andhary Mahaji (424) & Imadpur, Anchal- Sahar, District- Bhojpur, Bihar

- **Greenery development:** The project will not lead to any tree cutting. However, asocial responsibility, greenery will be developed along the both sides of road and the bank of river. Community services will be deployed in raising these plantations. Trees of economic importance and native origin such as fruit trees shall be planted.
- Approx. 245 trees will be planted around haul road during the plan period.
- The trees proposed for plantation are:
- As per Sustainable Sand Management & Mining Guidelines 2016, minimum 5 plant per hectare will be proposed for development of greenbelt but in this cluster of projects 10 plants per hectare will be proposed for better condition of environment.
- Total Number of plants for cluster of Sand Bloks are given below.

Sand Ghat	Area (Ha)	Plants
Block 39	24.5	24.5*10 Plants= 245 plants
Total Plants		245 plants

Table 9.1:- List of Plant selected for Green Belt Development

	Agro-climatic zone & Sub zone	Middle Genetic Plains, North west alluvial sub zone		
S/n	Scientific name	Common Name	Pollution control features	
1	Mangiferaindica	Aam	Tolerant to Dust control	
2	Tectonagrandis	Sagon	Tolerant to Dust control	
3	Ficusbenghalensis	Bargad	Tolerant to Dust control	
4	Scigiumcumuni	Jamun	To stop river bank erosion	
5	Terminaliaarjuna	Arjun	To stop river bank erosion	
6	Populus ciliate	Popular	Fast growing, broad leaf	
7	Ficusreligiosa	Peepal	Dust particles absorbance	
8	Acacia nilotica	Babul	Tolerant to SO <sub>2</sub>	
9	Azadirachtaindica	Neem	Tolerant to SO <sub>2</sub>	
10	Pithecolibiumducle	Jungle jalebi	Tolerant to SO <sub>2</sub> and Dust control	

# ENVIRONMENTAL MANAGEMENT PLAN

Project: Sand Mining Project (Bhoj Son 39 Sand Ghat) At Riverbed of Son River at Mauja Andhary Mahaji (424) & Imadpur, Anchal- Sahar, District- Bhojpur, Bihar

#### 9.6 LAND USE PLANNING

Degradation of land is not a very significant adverse impact of riverbed mining due to creation of access roads, mining operations, transportation of minedmaterial. In order to prevent the environmental degradation of leased mine area its surroundings, the following measures shall be taken;

- Mineral will be mined out after leaving sufficient safety zone from the bank as per sustainable sand mining guidelines-2016 for bank stability.
- The pits from where the material will be picked should not get deeper than 3.0 meter& shall follow the normal channel direction of the river.
- No foreign material shall be allowed to remain/spill in river bed and catchment area, or no pits/pockets will be allowed to be filled with such material.
- The mining is planned in non-monsoon seasons only, so that the excavated area gets replenished during the monsoon each year.
- Pits will get replenished naturally every year after monsoon.

#### 9.7 OCCUPATIONAL HEALTH & SAFETY

Occupational safety and health is very closely related to productivity and good employer-employee relationship. The factor of occupational health in Sand Ghat of Satyam Distributors Pro – Yogendra Kumar S/o- Late Bindeshwari Singh Add – 114/35-A, Brahmsthan road, Shekhpura Bagicha, B.B College, Patna – 800014 (Sand Block 39) is mainly dust. Safety of employees during operation and maintenance etc. shall be as per Mines rules and regulations. To avoid any adverse effect on the health of workers due to various pollutants, sufficient measures relating to safety and health will also be practiced:

- Provision of rest shelters for mine workers with amenities like drinking water, portable toilets etc.
- All safety measures like use of safety appliances, such as dust masks, shoes, non breakable goggles as the case may be, shall be ensured. Safety awareness programs, awards, posters, slogans related to safety etc. will be encouraged.

#### ENVIRONMENTAL MANAGEMENT PLAN

Project: Sand Mining Project (Bhoj Son 39 Sand Ghat) At Riverbed of Son River at Mauja Andhary Mahaji (424) & Imadpur, Anchal- Sahar, District- Bhojpur, Bihar

- Training of employees for use of safety appliances and first aid in vocational training center.
- Regular maintenance and testing of all equipment as per manufacturers' guidelines.
- Periodical Medical Examination (PME) of all workers by a Medical Officer.
- First Aid facility will be provided at the mine site.
- Close surveillance of the factors in working environment and work practices which may affect environment and worker's health.
- Working of mine as per approved mining plan and environmental plans.

#### 9.8 SOCIO-ECONOMIC ENVIRONMENT

This project operation will provide livelihood to the poorest section of the society. The overall impact of riverbed mining of sand on the social economics of the area shall be a very positive one, as not only it will generate employment opportunities for local population at mine site for transportation of mined material, etc. It will also give a good boost to the general economy of the area.

The proposed mining activity is expected to provide stimulus to socio-economic activities in the region and thereby accelerate further development processes. However, there is an apprehension that local people may get engaged in illegal activities if the proposed mining operation or the project is shelved or there is in ordinate delay in its execution.

#### 9.9 ENVIRONMENT POLICY

Satyam Distributors Pro – Yogendra Kumar S/o- Late Bindeshwari Singh Add – 114/35-A, Brahmsthan road, Shekhpura Bagicha, B.B College, Patna – 800014 (Sand Block 39) of Sand Ghat believes that responsible environmental stewardship comprises diligent application of well-established natural resource management, controls and practices for the protection of the mined out land, preservation of biodiversity and proper disposal of waste if any following the best environmental practices during the process of mining.

Environmental policy prescribed for standard operating process to bring into focus any violation/deviation of the environment and forest norms/conditions that the company operations will implement operational and risk management practices that provide for

#### ENVIRONMENTAL MANAGEMENT PLAN

Project: Sand Mining Project (Bhoj Son 39 Sand Ghat) At Riverbed of Son River at Mauja Andhary Mahaji (424) & Imadpur, Anchal- Sahar, District- Bhojpur, Bihar

maximum protection of people and the environment. To this end, the owner resolves that company will follow the below mentioned practices:

Operate in accordance with prescribed industry standards while complying with all applicable environmental, health and safety laws and regulations.

- Establish and maintain a well-defined environmental, health and safety management system to guide its operations.
- Ensure that all employees, officers and directors understand and adhere to its environmental, health and safety management program.
- Provide operations with the necessary resources, expertise and training to effectively carry out its EHS management programs.
- Engage employees at all levels in programs directed towards minimizing adverse effects on the environment resulting from mining activity.
- Work proactively with governments and the public in the development of cost effective and realistic regulations that promote enhanced environmental, health and safety protection.
- Promote environmental awareness among its employees, their families and the communities in which it operates.
- Require those who provide services and products to practice good environmental stewardship.
- Mitigate its environmental impacts through efficient use of resources, and the reduction of input materials and waste.
- Maintain a high degree of emergency preparedness.

#### 9.10 BUDGET ALLOCATION FOR EMP IMPLEMENTATION

Annual budget for EMC is very essential for successful implementation of EMP. Costs will be both Capital and Recurring cost as given below. The fund allocated will not be diverted for any other purposes and the top management will be responsible for this.

# **ENVIRONMENTAL MANAGEMENT PLAN**

Project: Sand Mining Project (Bhoj Son 39 Sand Ghat) At Riverbed of Son River at Mauja Andhary Mahaji (424) & Imadpur, Anchal- Sahar, District- Bhojpur, Bihar

Table 9.2, Budget of EMP (Block-39)

Sl. No	Description	Capital Cost (lakh)	Recurring Cost (lakh)
1	Pollution Control & Dust Suppression	Nil	1.5
2	Pollution Monitoring i) Air pollution ii) Water pollution iv) Noise Pollution		2.0
3	Plantation and salary for one gardener (part time basis).	2.45	0.5
4	Haul road Maintenance Cost	0.875	1.5
	TOTAL	3.325	5.5

Note: \*245 plants \* 1000 Rs (for each plants including hedges and fences) =Rs 245000/-

- Salary of Labour for haul road maintenance 2 labor\*300=600 per day
- 600\* 250= 1,50,000/-
- \* 2.5 lakh per kilometer (2,50,000 \*0.35 km haul road) = 2,45,000/-

\*\*\*\*\*\*

#### 10.0 INTRODUCTION

# 10.1 Purpose of the Report

Environmental Impact Assessment report is prepared to comply with the Terms of Reference (TOR) received from SEIAA, Bihar under EIA notification of the MoEF&CC dated 14<sup>th</sup> September, 2006 and its subsequent amendment there-off and also the EIA Guidance Manual for Mining of Minerals (Feb, 2010) of MoEF&CC, Govt. of India, for seeking environmental clearance for mining of Sand in the applied mining lease area.

#### 10.2 IDENTIFICATION OF PROJECT & PROJECT PROPONENT

#### **10.2.1 Identification of Project**

The Proposed Sand Mining Project is located on Son River at Block No – 39 Sand Ghat at Mauja–Andhary Mahaji (424) & Imadpur, Anchal- Sahar, District- Bhojpur (Bihar) over an area of 24.5 hectares. **Proposed Production of the project is 441000 cum/year or 749700 TPA.** 

The proposed mining was a cluster of 02 mining lease area of Bhojpur Son 39 & Bhojpur Son 40 cluster over a combined area of 64.0 Ha is for river bed sand mining on Son River.

**Cluster Situation:** As per District Survey Report Bhojpur the Proposed sand Ghats of block 39 & block 40 are comes in cluster situation whose combined cluster area is 64.0 ha. All the lease area of homogeneous minerals is coming within 500 m radius from each other confirming a cluster situation.

As per the Director of Geology, Bihar, the modification of mining plan has been approved .As per EIA notification 2016 and subsequent amendments, the project is coming under category 'B' (B1) and the lease area is more than 5.0 Ha, approved Mining Plan, Prefeasibility Report and EMP are required for Environment Clearance in respect of the said quarry lease. Copy of letter is enclosed as **Annexure No. II.** 

The Details of cluster is given below:

Sand Block Name	Area (Ha)	Production Excavation in Tonn (3 meter (Approved DSR)	Applicant
BHOJPUR SON 39	24.5	1190700	Satyam Distributors Pro – Yogendra

			Kumar
BHOJPUR SON 40	39.5	1919700	-
Total	64.0	3110400	

The proposed project is of River bed sand mining and falls under Category- "B1" as per EIA Notification 2006 and its subsequent amendments by Ministry of Environment Forests & Climate Change, GOI. Bhoj Son - 39 Sand Ghat fall in Mauja – Andhary Mahaji (424) & Imadpur, Tehsil – Sahar, Dist - Bhojpur, (Bihar). Area of proposed lease is 24.5 Ha.

# 10.3 BRIEF DESCRIPTION OF PROJECT

The proposed project is Open Cast Semi-Mechanized Mining of Sand with a proposed production of 441000 cum per annum or 749700 Tonnes per annum.

The project has been proposed by Satyam Distributors, Pro – Yogendra Kumar. The proposed project is over an area of 24.5 Ha at Khata no. – 7, 466 Khasra No.- 28, 29(Part), 1719, 1720 on Son River at Mauja – Andhary Mahaji (424) & Imadpur, Tehsil – Sahar, Dist - Bhojpur (Bihar). As per MoEF, New Delhi Gazette dated 14<sup>th</sup> September 2006 and amended thereof, the proposed mining project is categorized as **Category 'B-1'**. The estimated project cost for the proposed project is **Rs 16,25,35,000/-**(including auction cost)

The proposed mining lease area falls in Survey of India Toposheet 72C/12.

The mine lease co-ordinates and connectivity details are listed below:

Table: 10.1 Mine lease Co-ordinates (Block 39)

Pillar	Latitude (N)	Longitude (E)
No		
1.	25° 12' 29.106" N	84° 30' 12.702" E
2.	25° 12' 35.068" N	84° 30' 0.783" E
3.	25° 12' 48.833" N	84° 30' 28.362" E
4.	25° 12' 59.204" N	84° 30′ 50.317 ″ E
5.	25° 12' 56.116" N	84° 30′ 52.146″ E
6.	25° 12' 47.839" N	84° 30′ 50.490″ E
7.	25° 12' 50.183" N	84° 30' 46.970" E
8.	25° 12' 52.511" N	84° 30′ 39.040″ E
9.	25° 12' 47.889" N	84° 30' 30.250" E
10.	25° 12' 30.299" N	84° 30' 13.817" E

The details of environmental setting are given in **Table-10.2**.

**Table-10.2: Details of Environmental Setting**

#### 10.4 PROJECT DESCRIPTION

#### 10.4.1 Salient features of mine lease

The salient features of mine lease are given below:

Table-10.3: Salient features of mine lease

Sr. No.	Parameter	Description		
1	Name of the Mine	Sand Mining Project (Bhoj Son 39 Sand Ghat)		
		At Riverbed of Son River at Mauza Andhary		
		Mahaji (424) & Imadpur, Anchal- Sahar,		
		District- Bhojpur,Bihar		
2	Mining Capacity	441000 cum/year or 749700 TPA		
3	Method of mining	Open cast semi-mechanized mining/OTFM		
4	Total ML area	24.5 ha		
5	Depth of mining	3.0 m depth		
6	Manpower	44 persons		
9	Water Requirement	BLOCK 39 – 3.76 KLD		
10	Source of Water	Tanker/ Nearby village.		

#### 10.4.2 Mineral Reserves and production

Slices of height 1.5m & width 6.0 m has been drawn in geological sections to calculate the mineable reserves. The area of each bench level has been calculated & multiplied by strike influence to get the volume. Volume is multiplied by bulk density (1.7 kg/m3) to get Tonnes.

**Table 10.4 Classification Mineral Reserves** 

Sand Ghat	Area (Hect)	Geological Reserves (m3)	Mineable Reserves (m3)	Annual Mineable Permitted Reserve As per LoI (m3)
Bhoj Son 39	24.5	735000	630825	441000

In the lease area the river flow being reduced and sediment load get deposited. During flood season, the area gets replenished with sediments and source of erosion at this location. It is a river bed deposit and mined out area shall be replenished each year during monsoon period and depth of quarry shall be filled back by river sand each year and area will restore its original topography.

#### 10.4.3 Conceptual Plan

Mine Applied Area will be worked for Bhoj Son 39 Sand Ghat. However, as the digging depth will be restricted to 3.0 m only. This will be further replenished during rainy season. Sand Ghat will be worked systematically as the width is limited while length is much more. As the lease period is only 5 (Five) years, some of the area will be left un-worked at the end of lease period.

- (i) Final Slope Angle to Be Adopted: Height of the bench is limited to 1.5 m while width of individual bench shall be kept 6.0m. River bank side will be protected by working in dry part of the river and by leaving safety distance of the width of the river of 5 meter. Bank side natural slope will not be disturbed. This will prevent collapse of bank and erosion. However, the height of the bank with respect to river bed is varying from 3-4 meters.
- (ii) During plan period workings will be carried out in the Sand Ghat at a time of the Applied Area simultaneously. Scattered workings will ensure safety, remove congestion of vehicles and will have better control and management.
- (iii)Ultimate Capacity of Dumps: There will be no OB removal / during the plan period. Therefore no proposal has been envisaged for its separate dumping. No outside material will be filled up in the extracted zone.

The conceptual plan & section of each mining plots are attached with mine plan.

#### 10.4.4 Method of Mining

Mining activity will be carried out by open cast semi- mechanized method/OTFM. The operation will be semi-mechanized/OTFM with use of excavators/JCBs truck /tractors combination or Manually etc. The sand will be collected in its existing form.

#### 10.5 AFFORESTATION PROGRAMME

Topsoil if any would be utilized for intensive plantation and greenbelt development, all along the bank of the river. The details of plantation and number of saplings to be planted are given below. Approx. 245 trees will be planted around haul road during the plan period.

#### 10.6 LAND USE PATTERN

The mine lease area is flat river bed and river banks. There is no forest land or agriculture land in the mine lease area. The entire mining lease lies within River.

#### 10.7 BASELINE ENVIRONMENTAL STATUS

#### 10.7.1 Soil Quality

Three soil samples were collected in and around the mine lease area to assess the present soil quality of the region. The pH of the soil indicates that the soil is slightly alkaline in nature. Based on the results, it is evident that the soils are not contaminated by any polluting sources.

### 10.7.2 Meteorology

Meteorological data at the site was monitored during Dec 2022 to Jan-Feb 2023 representing winter season. It was observed that the during study period, temperature ranged from  $06~^{0}$ C to  $25.0~^{0}$ C.

#### 10.7.3 Ambient Air Quality

Ambient Air Quality Monitoring (AAQM) has been carried out at 8 locations. The Particulate Matter (PM10) conc. ranged of  $58.63~\mu g/m3$ to  $96.47~\mu g/m3$ . The Particulate Matter (PM2.5) ranged from  $33.3~\mu g/m3$  to  $60.62~\mu g/m3$ . Sulphur dioxide (SO2) between  $4.52~\mu g/m3$ to  $11.3~\mu g/m3$ . Oxides of Nitrogen (NO2) between  $5.4~\mu g/m3$ to  $20.6~\mu g/m3$ . The results thus obtained indicate that the concentrations of PM10, SO2 and NO2 in the ambient air are well within the National Ambient Air Quality (NAAQ) standards for Residential and Rural areas.

### 10.7.4 Water quality

To assess the physical and chemical properties of water in the region, water samples from 05 locations were collected from various water sources around the mine lease area. The pH was varying for ground waters from 7.14 to 8.24. The total dissolved solids are varying from 439 mg/l to 555 mg/l.

The results indicate groundwater is generally in conformity with the drinking water standards (IS: 10500).

The Surface water sampling was taken from 3 locations The analysis results indicate that the pH ranges between 8.25 and 8.45. Dissolved Oxygen (DO) was observed in the range of 6.5 to 7.5 mg/l against the minimum requirement of 4 mg/l. BOD values were observed to be in the range of 3 to 5 mg/l. Total Coliform examination of surface water samples revealed the presence of total coliform in range of 1900 MPN/100 ml to 400 MPN/100 ml.

Based on the results it is evident that most of the parameters of the samples comply with 'Category 'C' standards of CPCB (Table 3.5) are indicating their suitability for only Drinking water source after conventional treatment and disinfections.

### 10.7.5 Noise Quality

Noise monitoring reveals that the minimum & maximum noise levels at day time were recorded as 42.5 dB(A) to 50.6 dB(A) respectively. The minimum & maximum noise levels at night time were found to be 31.6 dB (A) & 41.2 dB(A) respectively.

#### 10.7.6 Ecological Environment

Based on the field studies and review of published literature, There is no any Ecological Sensitive Areas Like National Park, Wildlife Sanctuaries, etc are found within 10 km of the study area.

### 10.8 ANTICIPATED ENVIRONMENTAL IMPACTS

#### **10.8.1 Impact on Air Environment**

The proposed mining activities loading and movement of other transport vehicles used in mining will generate dust (SPM/RSPM). Proper water sprinkling shall be carried out at the mine site. The mineral will be transported by road through covered tarpaulin trucks/tippers to reduce the fugitive emission caused by the wind.

#### **10.8.2** Impact on Water Environment

Mining of sand from within or near river has an indirect impact on the physico-chemical habitat characteristics during monsoon season. These characteristics include in stream roughness elements, depth, velocity, turbidity, sediment transport and stream discharge.

The detrimental effects, if any, to biota resulting from bed material mining are caused by following:

• Alteration of flow patterns resulting from modification of the river

• An excess of suspended sediment during monsoon season.

Project activity will be carried out only in the dry part of the Son River. Hence, none of the project activities affect the water environment directly. In the project, it is not proposed to divert or truncate any stream in monsoon season only. No proposal is envisaged for pumping of water either from the *River* (in monsoon) or tapping the ground water.

# 10.8.3 Impact on Water Quality

Analysis results of water samples collected from the buffer zone indicate that the pH, total dissolved solids (TDS) are well below the prescribed limits.

No wastewater generation is envisaged due to the mining operations. The sanitary wastewater will be sent to septic tanks.

#### 10.8.4 Impact on Noise Environment

The proposed mining activity is semi-mechanized/OTFM in nature. No drilling & blasting is envisaged for the mining activity. Hence, the only impact is anticipated is due to movement of vehicles deployed for transportation of minerals. The vehicles will be maintained in good running condition so that noise will be reduced to minimum possible level.

#### **10.8.5 Impact on Land Environment**

The proposed extraction of stream bed materials, mining below the existing streambed, and alteration of channel-bed form and shape may lead to several impacts such as erosion of channel bed and banks, increase in channel slope, and change in channel morphology if, the operations are not carried out systematically.

The systematic and scientific removal of sand will not cause bed degradation. The silt and clay generated as waste will be used for plantation or filling up low lying area elsewhere. The mining is planned in non monsoon seasons only, so that the excavated area gets replenished gradually during the monsoons each year.

### 10.8.6 Impact on flora and fauna

As the proposed mining will be carried out in a scientific manner, not much significant impact is anticipated. No mining will be carried out during the monsoon season to minimize

impact on aquatic life which is mainly breeding season for many of the species. The mining site has no vegetation; no clearance of vegetation will be done. Haul roads will be sprinkled with water which would reduce the dust emission, thus avoiding damage to the crops.

#### 10.8.7 Impact on Socio - Economic Aspects

The mine area does not cover any habitation. Hence the mining activity does not involve any displacement of human settlement. No public buildings, places, monuments etc exist within the lease area or in the vicinity. The mining operation will not disturb/ relocate any village or need resettlement. Thus no adverse impact is anticipated. The impact of mining activity in the area is positive on the socio-economic environment of the region. Sand mining will be providing employment to local people whenever there is requirement of manpower.

#### 10.9 ENVIRONMENTAL MANAGEMENT PLAN

- Extraction will be done from the bed leaving safety zone from bank.
- The maximum working depth will remain above ground water table of the area.
- Provide health facilities to the workers & surrounding people in the impact area to reduce the health impacts.
- Ensuring wildlife protection & arranging awareness campaigns for the same.
- Minimize activities that release fine sediment to the river.
- Effective mitigation measures will be adopted to minimize disturbance during transportation & handling of minerals:
- Establishment of reclamation program with plantation of local/native & fast growing species
- Establishment of restoration plan during the closure of mine at the onset of monsoon season.
- Establishment of effective Disaster Management Plan to take timely precautionary measures to avoid effects of impending disasters.
- Establishment of effective Monitoring Program monitored by Environment Management Cell.

#### 10.10 ENVIRONMENTAL MONITORING PROGRAM

Table 10.5: Post project environmental monitoring

# **SUMMARY & CONCLUSION**

Project: Sand Mining Project (Bhoj Son 39 Sand Ghat) At Riverbed of Son River at Mauja Andhary Mahaji (424) & Imadpur, Anchal- Sahar, District- Bhojpur (Bihar).

S.No.	Description of Parameters	Schedule of Monitoring
1	Air Quality	24 hourly samples twice a week in each season except monsoon
2	Water Quality (Surface & Groundwater)	Once a season for 4 seasons in a year
3	Soil Quality	Once in a year in project area
4	Noise Level	Twice a year for first two years & then once a year
5	Socio-economic Condition	Once in 3 years
6	Plantation Monitoring	Once in a season

#### 10.11 ENVIRONMENTAL PROTECTION COST

The details of the cost to be incurred for successful monitoring of environmental parameters and implementation of control measures are given in **Table-10.6**.

Table 10.6: Cost of Environmental Protection Measures
Table 10.6 (a), Budget of EMP (Block-39)

Sl. No	Description	Capital Cost (lakh)	Recurring Cost (lakh)
1	Pollution Control & Dust Suppression	Nil	1.5
2	Pollution Monitoring i) Air pollution ii) Water pollution iv) Noise Pollution		2.0
3	Plantation and salary for one gardener (part time basis).	2.45	0.5
4	Haul road Maintenance Cost	0.875	1.5
	TOTAL	3.325	5.5

Note: \*245 plants \* 1000 Rs (for each plants including hedges and fences) =Rs 245000/-

- Salary of Labour for haul road maintenance 2 labor\*300=600 per day
- 600\* 250= 1,50,000/-
- \* 2.5 lakh per kilometer (2,50,000 \*0.35 km haul road) = 2,45,000/-

### 10.12 ADDITIONAL STUDIES

#### 10.12.1 Risk Assessment

The complete mining operation will be carried out under the management control and direction of a qualified mine manager holding. The DGMS have been regularly issuing standing orders, model, standing orders and circulars to be followed by the mine management in case of disaster, if any.

# 10.12.2 Disaster Management Plan

Emergency preparedness is an important aspect in the planning of Disaster Management. Personnel would be trained suitably and prepared mentally and physically in emergency response through carefully planned, simulated procedures. Similarly, the key personnel and essential personnel shall be trained in the operations.

#### 10.12.3 Public Consultation

This is a draft EIA report. Public Hearing will be incorporated in FEIA report.

#### 10.13 PROJECT BENEFITS

**Physical Benefits:** Road Transport, Market, Enhancement of green cover & Creation of community assets.

**Social Benefits:** Increase in Employment Potential, Contribution to the Exchequer, Increased Health related activities, Educational attainments & Strengthening of existing community facilities.

#### **Environmental Benefits:**

- ➤ Controlling river channel and protection of banks.
- ➤ Reducing submergence of adjoining agricultural lands due to flooding.
- > Reducing aggradation of river level.
- A check on illegal mining activity.

# **Corporate Social Responsibility**

2% of capital cost of the project cost will be allotted for the Corporate Environmental Responsibility as per OM dated 1<sup>st</sup> May 2018. The following has been proposed considering the needs & demand of the people.

CER cost will be 2% of the total project cost. This amount will be used for social welfare.

# **SUMMARY & CONCLUSION**

Project: Sand Mining Project (Bhoj Son 39 Sand Ghat) At Riverbed of Son River at Mauja Andhary Mahaji (424) & Imadpur, Anchal- Sahar, District- Bhojpur (Bihar).

CER COST is  $16,25,35,000/-x\ 2\% = Rs.\ 32,50,700/-.$ 

For each activity the funds to be earmarked by the proponent will be decided after discussion with the local authority/people and the beneficiaries during Public Hearing. It has been planned to undertake a concurrent evaluation of the activities to be taken up under the CER programme.

#### 10.14 CONCLUSIONS

- The mining operations will meet the compliance requirements of MoEF&CC;
- Community impacts will be beneficial, as the project will generate significant economic benefits for the region;
- Monitoring program will be followed till the mining operations continue.
- With the effective implementation of the Environment Management Plan (EMP) during the mining activities, the proposed project can proceed without any significant negative impact on environment.

Sub.: Extension of Validity of Accreditation till June 06, 2023 – regarding Ref.. Certificate no. NABET/EIA/1922/IA0053

Dear Sir/Madam

This has reference to the accreditation of your organization under the QCI-NABET EIA Scheme, the validity of **P and M Solution** is hereby extended till June 06, 2023 or completion of the assessment process, whichever is earlier.

The above extension is subject to the submitted documents/required information with respect to your application and timely submission and closure of NC/Obs during the process of assessment.

You are requested not to use this letter after expiry of the above stated date.

With best regards.

(A K Jha)

# Sir/Madam,

This has reference to your online proposal submitted in the State Level Environment Impact Assessment Authority to prescribe the Terms of Reference (ToR) for undertaking detailed EIA study for the purpose of obtaining Environmental Clearance in accordance with the provisions of the EIA Notification, 2006. For this purpose, you have submitted online information in the prescribed format (Form - I) along with a Pre-feasibility Report. The details of the proposal as described in the application are as follows:-

1.	Online Proposal No.	P	SIA/BR/MIN/408134/2022	
2.	File No.:		SIA/1(a)/2061/2022	
	Name of the Proposal		Son River at Bhojpur Son 39 Balu	
3.			Ghat, Mauza-Andhary Mahaji	
			(424) Imadpur,, Tehsil-Sahar,	
		2-50	District:- Bhojpur, State:- Bihar;	
4.	Category of the Proposal:	RESERVED PLAN	Mining of Minerals.	
5.	Project/Activity applied for		1(a) Mining of Minerals.	
6.	Name of River		Son River	
7.	Area of the Project		24.5 Ha	
8.	Khata, Khesra and Thana No.		Khata No7,466	
0.			Khesra No28, 29, 1719, 1720	
9.	Proposed Production		441000 cum per annum,	

In this regard, under the provisions of the EIA Notification, 2006 as amended from time to time Sustainable Sand Management Guidelines 2016 and Enforcement & Monitoring Guidelines for Sand Mining" (EMGSM-2020) for the sand mining-2020 the ToR for the purpose of preparing Environment Impact Assessment report and Environment Management Plan for obtaining prior Environmental Clearance is prescribed as follows:-

# STANDARD TERMS OF REFERENCE (TOR)

- 1. Year-wise production details since 1994 should be given, clearly stating the highest production achieved in any one year prior to 1994. It may also be categorically informed whether there had been any increase in production after the EIA Notification 1994 came into force, w.r.t. the highest production achieved prior to 1994.
- 2. A copy of the document in support of the fact that the Proponent is the rightful lessee of the mine should be given.

- 3. All documents including approved mine plan, EIA and Public Hearing should be compatible with one another in terms of the mine lease area, production levels, waste generation and its management ,mining technology etc. and should be in the name of the lessee.
- 4. All corner coordinates of the mine lease area, superimposed on a High Resolution Imagery/ toposheet, topographic sheet, geomorphology and geology of the area should be provided. Such an Imagery of the proposed area should clearly show the land use and other ecological features of the study area(core and buffer zone).
- 5. Information should be provided in Survey of India Toposheet in 1:50,000 scale indicating geological map of the area, geomorphology of land forms of the area, existing minerals and mining history of the area, important water bodies, streams and rivers and soil characteristics.
- 6. Details about the land proposed for mining activities should be given with information as to whether mining conforms to the land use policy of the State; land diversion for mining should have approval from State land use board or the concerned authority.
- 7. It should be clearly stated whether the proponent Company has a well laid down Environment Policy approved by its Board of Directors? If so, it may be spelt out in the EIA Report with description of the prescribed operating process/procedures to bring into focus any infringement/deviation/violation of the environmental or forest norms/ conditions? The hierarchical system or administrative eorder of the Company to deal with the environmental issues and for ensuring compliance with the EC conditions may also be given. The system of reporting of non-compliances / violations of environmental norms to the Board of Directors of the Company and/or shareholders or stake holders at large ,may also be detailed in the EIA Report.
- 8. Issues relating to Mine Safety, including subsidence study in case of underground mining and slope study in case of open cast mining, blasting study etc. should be detailed. The proposed safeguard measures in each case should also be provided.
- 9. The study area will comprise of 10 km zone around the mine lease from lease periphery and the data contained in the EIA.

- 10. Land use of the study area delineating forest area, agricultural land, grazing land, wildlife sanctuary ,national park, migratory routes of fauna, water bodies, human settlements and other ecological features should be indicated. Land use plan of the mine lease area should be prepared to encompasspre operational, operational and post operational phases and submitted. Impact, if any, of change of land use should be given.
- 11. Details of the land for any Over Burden Dumps outside the mine lease, such as extent of land area, distance from mine lease, its land use, R&R issues, if any, should be given.
- 12. A Certificate from the Competent Authority in the State Forest Department should be provided, confirming the involvement of forest land, if any, in the project area. In the event of any contrary claim by the Project Proponent regarding the status of forests, the site may be inspected by the State Forest Department along with the Regional Office of the Ministry to ascertain the status of forests, based on which, the Certificate in this regard as mentioned above be issued. In all such cases, it would be desirable for representative of the State Forest Department to assist the Expert Appraisal Committees.
- 13. Status of forestry clearance for the broken up area and virgin forestland involved in the Project including deposition of net present value (NPV) and compensatory afforestation (CA) should be indicated. A copy of the forestry clearance should also be furnished.
- 14. Implementation status of recognition of forest rights under the Scheduled Tribes and other Traditional Forest Dwellers (Recognition of Forest Rights) Act, 2006 should be indicated.
- 15. The vegetation in the RF / PF areas in the study area, with necessary details, should be given.
- 16. A study shall be got done to ascertain the impact of the Mining Project on wildlife of the study are and details furnished. Impact of the project on the wildlife in the surrounding and any other protected area and accordingly, detailed mitigative measures required, should be worked out with cost implications and submitted.
- 17. Location of National Parks, Sanctuaries, Biosphere Reserves, Wildlife Corridors, Ramsar site Tiger/Elephant Reserves/(existing as well as proposed), if any, within 10 km of the

mine lease should be clearly indicated, supported by a location map duly authenticated by Chief Wildlife Warden. Necessary clearance, as may be applicable to such projects due to proximity of the ecologically sensitive areas as mentioned above, should be obtained from the Standing Committee of National Board of Wildlife and copy furnished.

- 18. A detailed biological study of the study area [core zone and buffer zone (10 km radius of the periphery of the mine lease)] shall be carried out. Details of flora and fauna, endangered, endemic and Rare Endangered and Threatened (RET) Species duly authenticated, separately for core and buffer zone should be furnished based on such primary field survey, clearly indicating the Schedule of the fauna present. In case of any scheduled-I fauna found in the study area, the necessary plan along with budgetary provisions for their conservation should be prepared in consultation with State Forest and Wildlife Department and details furnished. Necessary allocation of funds for implementing the same should be made as part of the project cost.
- 19. Proximity to Areas declared as 'Critically Polluted' or the Project areas attracting court restrictions for mining operations, should also be indicated and where so required, clearance certifications from the prescribed Authorities, such as the SPCB or State Mining Dept. Should be secured and furnished to the effect that the proposed mining activities could be considered.
- 20. R&R Plan/compensation details for the Project Affected People (PAP) should be furnished. While preparing the R&R Plan, the relevant State/National Rehabilitation & Resettlement Policy should be kept in view. In respect of SCs /STs and other weaker sections of the society in the study area, anteed based sample survey, family-wise, should be undertaken to assess their requirements, and action programmers prepared and submitted accordingly, integrating the sectoral programmers of line departments of the State Government. It may be clearly brought out whether the village(s)located in the mine lease area will be shifted or not. The issues relating to shifting of village(s)including their R&R and socio-economic aspects should be discussed in the Report.
- 21. One season (non-monsoon) primary baseline data on ambient air quality as perCPCB Notification of 2009, water quality, noise level, soil and flora and fauna shall be collected and the AAQ and other data so compiled presented date-wise in the EIA and EMP

Report. Site specific meteorological data should also be collected. The location of the monitoring stations should be such as to represent whole of the study area and justified keeping in view the pre-dominant downwind direction and location of sensitive receptors. There should be at least one monitoring station within 500 m of the mine lease in the pre-dominant downwind direction. The mineralogical composition of  $PM_{10}$ , particularly for free silica, should be given.

- 22. Air quality modeling should be carried out for prediction of impact of the project on the air quality of the area. It should also take into account the impact of movement of vehicles for transportation of mineral. Details of the model used and input parameters used for modeling should be provided for both mining and non-mining scenario. The air quality contours should be shown on a location map clearly indicating the location of the site, location of sensitive receptors, and the habitation. The wind roses showing predominant wind direction also be indicated on the map.
- 23. The water requirement for the Project, its availability and source should be furnished. A detailed water balance should also be provided. Fresh water requirement for the Project should be indicated.
- 24. Necessary clearance from the Competent Authority for drawl of requisite quantity of water for the Project should be provided.
- 25. Description of water conservation measures proposed to be adopted in the Project should be given.
- 26. Impact of the Project on the water quality, both surface and groundwater, should be assessed and necessary safeguard measures, if any required, should be provided.
- 27. Based on actual monitored data, it may clearly be shown whether working will intersect groundwater. Necessary data and documentation in this regard may be provided. In case the working will intersect groundwater table, a detailed Hydro Geological Study should be undertaken and Report furnished. The Report inter-alia, shall include details of the aquifers present and impact of mining activities on these aquifers. Necessary permission

- from Central Ground Water Authority for working below ground water and for pumping of ground water should also be obtained and copy furnished.
- 28. Details of any stream, seasonal or otherwise, passing through the lease area and modification /diversion proposed, if any, and the impact of the same on the hydrology should be brought out.
- 29. Information on site elevation, working depth, groundwater table etc. Should be provided both in AMSL and bgl. A schematic diagram may also be provided for the same.
- 30. A time bound Progressive Greenbelt Development Plan shall be prepared in a tabular form (indicating the linear and quantitative coverage, plant species and time frame) and submitted, keeping in mind, the same will have to be executed up front on commencement of the Project. Phase-wise plan of plantation and compensatory a forestation should be charted clearly indicating the area to be covered under plantation and the species to be planted. The details of plantation already done should begiven. The plant species selected for green belt should have greater ecological value and should be of good utility value to the local population with emphasis on local and native species and the species which are tolerant to pollution.
- 31. Impact on local transport infrastructure due to the Project should be indicated. Projected increase in truck / tractor and other vehicular traffic as a result of the Project in the present road network (including those outside the Project area) should be worked out, indicating whether it is capable of handling the incremental load. Arrangement for improving the infrastructure, if contemplated (including action to be taken by other agencies such as State Government) should be covered. Project Proponent shall conduct Impact of Transportation study as per Indian Road Congress Guidelines.
- 32. Details of the onsite shelter and facilities to be provided to the mine workers should be included in the EIA Report.
- 33. Conceptual post mining land use and Reclamation and Restoration of mined out areas (with plans and with adequate number of sections) should be given in the EIA report.

- 34. Occupational Health impacts of the Project should be anticipated and the proposed preventive measures spelt out in detail. Details of pre-placement medical examination and periodical medical examination schedules should be incorporated in the EMP. The project specific occupational health mitigation measures with required facilities proposed in the mining area may be detailed.
- 35. Public health implications of the Project and related activities for the population in the impact zone should be systematically evaluated and the proposed remedial measures should be detailed along with budgetary allocations.
- 36. Measures of socio economic significance and influence to the local community proposed to be provided by the Project Proponent should be indicated. As far as possible, quantitative dimensions may be given with time frames for implementation.
- 37. Detailed environmental management plan (EMP) to mitigate the environmental impacts which, should inter-alia include the impacts of change of land use, loss of agricultural and grazing land, if any, occupational health impacts besides other impacts specific to the proposed Project.
- 38. Public Hearing points raised and commitment of the Project Proponent on the same along with time bound Action Plan with budgetary provisions to implement the same should be provided and also incorporated in the final EIA/EMP Report of the Project.
- 39. Details of litigation pending against the project, if any, with direction /order passed by any Court of Law against the Project should be given.
- 40. The cost of the Project (capital cost and recurring cost) as well as the cost towards implementation of EMP should be clearly spelt out.
- 41. A Disaster management Plan shall be prepared and included in the EIA/EMP Report.
- 42. Benefits of the Project if the Project is implemented should be spelt out. The benefits of the Project shall clearly indicate environmental, social, economic, employment potential, etc.
- 43. Besides the above, the below mentioned general points are also to be followed:-

- a) All documents to be properly referenced with index and continuous page numbering.
- b) Where data are presented in the Report especially in Tables, the period in which the data were collected and the sources should be indicated.
- c) Project Proponent shall enclose all the analysis/testing reports of water, air, soil, noise etc. using the MoEF&CC/NABL accredited laboratories. All the original analysis/testing reports should be available during appraisal of the Project.
- d) Where the documents provided are in a language other than English, an English translation should be provided.
- e) The Questionnaire for environmental appraisal of mining projects as devised earlier by the Ministry shall also be filled and submitted.
- f) While preparing the EIA report, the instructions for the Proponents and instructions for the Consultants issued by MoEF vide O.M. No. J-11013/41/2006-IA.II(I) dated 4th August, 2009, which are available on the website of this Ministry, should be followed.
- g) Changes, if any made in the basic scope and project parameters (as submitted in Form-I and the PFR for securing the TOR) should be brought to the attention of MoEF&CC with reasons for such changes and permission should be sought, as the TOR may also have to be altered. Post Public Hearing changes in structure and content of the draft EIA/EMP (other than modifications arising out of the P.H. process) will entail conducting the PH again with the revised documentation.
- h) As per the circular no. J-11011/618/2010-IA.II(I) dated 30.5.2012, certified report of the status of compliance of the conditions stipulated in the Environment Clearance for the existing operations of the project, should be obtained from the Regional Office of Ministry of Environment, Forest and Climate Change, as may be applicable.
- i) The EIA report should also include (i) surface plan of the area indicating contours of main topographic features, drainage and mining area, (ii) geological maps and sections and (iii) sections of the mine pit and external dumps, if any, clearly showing the land features of the adjoining area.

### Additional specific conditions

- 1. Submit a report based on cumulative assessment of increase in air pollutants due to increase in traffic load in view of proposed mining activities on the roads located within aerial distance of 10 km using suitable air model.
- 2. If the proposed mining lease is overlapping with the previously allotted mining lease or already working or worked out mining lease, the same must be clearly

- shown (on the map). The details about the quantity of sand extracted from overlapped area should also be furnished duly certified from the concerned District Mining Officer.
- 3. The satellite imageries (high resolution) of last three years in succession for summer, rainy and winter seasons of each proposed mining lease must be submitted. A map on appropriate scale be submitted to show extraction paths to be used outside the mining lease boundary to approach major public roads (Rural/District road or State/National Highway).
- 4. Alternative route be explored if extraction path is passing through dense population/ human settlements.
- 5. A Cumulative traffic management plan for cluster sand mining proposal must be submitted.
- 6. A map of the area falling within 2.5 km radius from boundary of each mining lease showing all man-made public utility features such as bridge/public civil structure (including water intake points), culverts etc. and highways, and a table showing distance of the above mentioned man-made features from the mining lease boundary to facilitate decision making pertaining to relevant rules / Guidelines be submitted.
- 7. A report of the cumulative EIA/EMP study for the cluster sand mining blocks of the proposed mining site.

विषय

भोजपुर जिलान्तर्गत सोन नदी के बालूघाट / बालूखण्ड संख्या—39 की आगामी पाँच वर्षों के लिए बन्दोबस्ती हेतु दिनांक—17.10.2022 को सम्पन्न ई—नीलामी में उच्चतम् डाकवक्ता घोषित होने के फलस्वरूप सैद्धांतिक स्वीकृत्यादेश के संबंध में।

महाशय,

उपर्युक्त विषयक भोजपुर जिलान्तर्गत सोन नदी के बालूघाट/बालूखण्ड संख्या—39, रकवा—24.5 हेक्टेयर की आगामी पाँच वर्षों के लिए बन्दोबस्ती हेतु दिनांक—17.10.2022 को सम्पन्न ई—नीलामी में आपके द्वारा रु. 6,61,50,000/— (छः करोड़ इकसठ लाख पच्चास हजार मात्र) की सुरक्षित जमा राशि के विरुद्ध उच्चतम् डाक की राशि रु. 15,87,60,000/— (पन्द्रह करोड़ सत्तासी लाख साठ हजार मात्र) की बोली लगाये जाने के फलस्वरूप आप उच्चतम् डाकवक्ता घोषित हुए हैं। निविदा दस्तावेज की कंडिका—20 (i) के आलोक में आपके द्वारा नीलामी राशि की 25 प्रतिशत राशि (जमा अग्रधन राशि समायोजनोपरान्त) प्रतिमूति जमा के रुप में राशि रु. 2,31,52,500/— (दो करोड़ ईकतीस लाख बावन हजार पाँच सौ रुपये मात्र) के भुगतान का साक्ष्य दिनांक—22.10.2022 को कार्यालय में प्रस्तुत किया गया है।

निविदा दस्तावेज की कंडिका 20(i)(ii)(ii)(iv)(v) के आलोक में जिलान्तर्गत सोन नदी के बालूघाट/बालूखण्ड संख्या—39 का सैद्धांतिक स्वीकृति के शर्त्त एवं बंधेज निम्नवत् हैं :—

1. बालूघाट / बालूखण्ड संख्या-39 से संबंधित विवरणी निम्नवत् है :-

各的社		रकवा	Geo Coordinates				
क्र.	नदी का नाम	(हेक्टेयर में)	Latitude	Longitude

### 2. भुगतान की शर्ते :-

(i) नीलामीत-राशि केवल प्रथम वर्ष के लिए बंदोबस्ती की राशि मानी जाएगी। दूसरे वर्ष और उसके अनुक्रमी वर्षों में बंदोबस्ती की राशि गत् वर्ष की बंदोबस्ती राशि के 120 प्रतिशत् अथवा समय-समय पर सरकार द्वारा निर्धारित निदेशों के अनुरूप होगा।

(ii) प्रतिभूति जमा के अतिरिक्त आपको निम्नलिखित समय सारणी / भुगतान अनुसूची के अनुसार बंदोबस्ती

की राशि का भगतान करना होगा :--

किस्त	मुगतान की नियत तारीख	
प्रथम किस्त (50%)	(क) पट्टा संविदा निष्पादन से पहले (पहले वर्ष के लिए) (ख) प्रथम वर्ष में पट्टा संविदा निष्पादन की तिथि से एक वर्ष पूरा होने के 60 दिन पूर्व और अनुक्रमिक वर्षों में इसी प्रक्रिया का पालन करते हुए जमा किया जायेगा।	
द्वितीय किस्त (25%)	पट्टा संविदा निष्पादन की तिथि से 03 महीना पूरा होने से पहले।	
तृतीय किस्त (25%)	पट्टा संविदा निष्पादन की तिथि से 06 महीना पूरा होने से पहले।	

- 3. <u>GST का भुगतान :-</u> जी०एस०टी० के रूप में प्रचलित दर के अनुसार राशि वाणिज्य कर विभाग को भुगतान करना होगा। जिला खनन् कार्यालय, भोजपुर में जी०एस०टी० भुगतान का प्रमाण प्रत्येक किस्त के साथ देना होगा।
- 4. <u>आयकर / अन्य करों का मुगतान :—</u> आयकर अधिनियम के तहत आयकर एवं उस पर नियमानुसार देय अधिभार का भुगतान आयकर विभाग के प्रचलित दर के अनुसार एक मुश्त करना होगा। यह राशि बंदोबस्ती राशि के प्रत्येक किस्त के साथ देय होगी। जिला खनन् कार्यालय, भोजपुर द्वारा यह राशि आयकर मद में जमा करा दी जायेगी।
- 5. जिला खनिज फाउन्डेशन :— Bihar District Mineral Foundation Rules, 2018 के अनुसार बंदोबस्ती राशि की दो (2) प्रतिशत राशि जिला खनिज फाउण्डेशन, भोजपुर के नाम भुगतेय बैंक ड्राफ्ट के माध्यम से करना होगा।
- 6. वैधानिक अनापत्ति :— बालूघाट संचालन हेतु आवश्यक समस्त वैधानिक अनापत्ति/अनुमित यथा:— खनन योजना, पर्यावरणीय स्वीकृति, जल एवं वायु सहमित आदि निर्धारित अविध के अन्दर आपके द्वारा प्राप्त करना होगा। वैधानिक अनापत्ति/अनुमित प्राप्त करने के पश्चात् ही बालू खनन प्रारंभ किये जाने हेतु कार्यादेश निर्गत किया जा सकेगा।

वैधानिक अनापत्ति/अनुमित निम्नानुसार है:-

i. खनन योजना:— खनन योजना प्रभावी नियमों में उल्लिखित प्रावधानों के अनुसार सफल डाकवक्ता/बंदोबस्तधारी द्वारा QCI/NABET से मान्यता प्राप्त Professional RQP से तैयार कर निदेशक, खान या विभाग द्वारा प्राधिकृत पदाधिकारी के समक्ष लेटर ऑफ इंटेंट निर्गत होने से 30 दिनों के अन्दर अनुमोदन के लिए प्रस्तुत करेगा। खनन योजना बनाने पर होने वाले व्यय का वहन संबंधित खनिज डाकवक्ता/बंदोबस्तधारी द्वारा किया जायेगा। साथ ही खनन योजना की जाँच हेतु समाहर्त्ता/विभाग अन्य ऐजेंसी चयनित कर सकेगा, जिसका निर्धारित फीस/खर्च भी बंदोबस्तधारी को ही वहन करना होगा। सफल डाकवक्ता/बंदोबस्तधारी खनन योजना के अनुसार खनन करना सुनिश्चित करेंगे।

ii. पर्यावरणीय स्वीकृति:— सफल डाकवक्ता / बंदोबस्तधारी खनन योजना अनुमोदन के 15 दिनों के अन्दर पर्यावरण, वन एवं जलवायु परिवर्तन मंत्रालय, भारत सरकार के सक्षम प्राधिकार के समक्ष पर्यावरणीय स्वीकृति (EC) के लिए प्रस्ताव समर्पित करेगा। समयबद्ध रीति से पर्यावरणीय एवं अन्य

वैधानिक स्वीकृति प्राप्त करना सफल डाकवक्ता की जिम्मेवारी होगी। अपेक्षित पर्यावरणीय स्वीकृति एवं अन्य आवश्यक स्वीकृति प्राप्त करने में किसी भी प्रकार की देरी के लिए सफल डाकवक्ता स्वंय

M

जिम्मेवार होंगे एवं इस संबंध में किसी भी प्रकार की क्षतिपूर्ति के लिए कोई भी दावा मान्य नहीं होगा।

iii. जल एवं वायु सहमित:— पर्यावरणीय स्वीकृति प्राप्त करने के पश्चात सफल डाकवक्ता अधिकतम 07 (सात) दिवस के अंदर जल (प्रदूषण निवारण एवं नियंत्रण) अधिनियम, 1974 तथा वायु (प्रदूषण निवारण एवं नियंत्रण) अधिनियम, 1981 के अधीन सक्षम पदाधिकारी के समक्ष सहमित / Consent to Establish/ Consent to Operate प्राप्त करने हेतु आवेदन प्रस्तुत करेगा।

खनन के लिए अनुमत मात्राः— खनन योजना, पर्योवरणीय स्वीकृति तथा जल (प्रदूषण निवारण एवं नियंत्रण) अधिनियम, 1974 तथा वायु (प्रदूषण निवारण एवं नियंत्रण) अधिनियम, 1981 के तहत प्राप्त सहमति मे वर्णित बालू की मात्रा (इनमें से जो भी कम हो) तक ही खनन अनुमान्य होगा। अनुमोदित खनन योजना, पर्यावरणीय स्वीकृति तथा जल एवं वायु सहमति में खनन योग्य मात्रा कम किये जाने

पर भी वार्षिक देय बंदोबस्ती राशि किसी स्थिति में कम नहीं की जाएगी।

v. बिना किसी वैध कारण के पर्यावरणीय स्वीकृति, Consent to Establish/ Consent to Operate /जल एवं वायु सहमति प्राप्त नहीं कर पाते है या प्राप्त करने में रूचि नहीं लेते है तो, समाहर्त्ता द्वारा अग्रधन की राशि को जप्त कर लिया जायेगा।

### 7. बंदोबस्ती विलेख/पट्टा संविदा (डीड) निष्पादन करना :--

i. सफल डाकवक्ता द्वारा सभी वैधानिक अनापत्ति प्राप्त करने के उपरान्त 5 वर्षों की अविध के लिए बालू खनन करने हेतु समानुदान / बन्दोबस्ती स्वीकृत किया जाएगा। सफल डाकवक्ता विहित प्रपत्र में संबंधित नियमानुसार बंदोबस्ती विलेख अथवा उसके समरूप एक प्रपत्र, कार्य आरंभ करने के पहले, निष्पादित करेगा तथा विहित अपेक्षित राशि संबंधित विभाग में जमा कर देगा। बंदोबस्तधारी के पट्टे की अविध विलेख / संविदा निष्पादन की तिथि से पाँच वर्षों के लिए विधिमान्य होगा।

ii. बंदोबस्तधारी को निष्पादित संविदा का निबंधन संबंधित विमाग के प्रचलित नियमों के

अधीन 01 माह के अन्दर कराना अनिवार्य होगा।

8. सफल डाकवक्ता / बन्दोबस्तधारी द्वारा बन्दोबस्ती प्रत्यर्पण / कारोबार छोड़ने का विकल्प बिहार खनिज (समनुदान, अवैध खनन, परिवहन एवं भण्डारण निवारण) नियमावली, 2019 के नियम—50 के अनुरूप किया जा सकेगा।

सामान्य शर्त्ते :-

(i) निविदादाता / सफल डाकवक्ता / बंदोबस्तधारी द्वारा ई—मेल के माध्यम से किया गया पत्राचार ही मान्य होगा।

(ii) बन्दोबस्ती लेने के बाद सभी बालूघाटों के लिये बालू के उत्तोलन कार्य में संलग्न सभी सहयोगी व्ययक्तियों / प्रबंधकों की सूची, पूर्ण पता एवं फोटो के साथ एक माह के अन्दर समाहर्त्ता को उपलब्ध कराना एवं पोर्टल पर अपलोड करना होगा। यदि इसमें कोई बदलाव होता है तो उसकी भी सूची अविलम्ब पोर्टल पर अपलोड / उपलब्ध करायेंगें।

(iii) बंदोबस्तधारी नदी तट से बालू प्रेषण के बिन्दु पर एक साईनबोर्ड एवं सीमा स्तंभ का अधिष्ठापन करायेगा जिसपर बंदोबस्तधारी का नाम एवं पता, बंदोबस्ती की अवधि, स्थानीय मैनेजर का नाम एवं पता तथा बालू का विक्रय मूल्य प्रदर्शित किया जाएगा। यदि साईन बोर्ड निरीक्षण में नहीं

पाया गया तो शास्ति अधिरोपित की जाएगी।

(iv) बंदोबस्तधारी श्रम विधियों के प्रावधानों के अनुसार आश्रय गृह, पीने का पानी, शिशु गृह (क्रेचेज)

तथा फर्स्ट एड किट की व्यवस्था संबंधित बालूघाटों में लगे श्रमिकों के लिए करेगा।

(v) बंदोबस्तधारी संबंधित क्षेत्रों का निरीक्षण करेगा तथा स्वयं अथवा अपने द्वारा अधिकृत प्रतिनिधियों के माध्यम से बालूघाटों का प्रचालन करेगा। किसी रूप में किये गये उपपट्टा (सबलेटिंग) के लिए बंदोबस्ती रद्द कर दी जाएगी। बालूघाटों / नदी तल तक बालू के परिवहन के प्रयोजनार्थ पहुँच—पथ (अप्रोच रोड) का निर्माण सफल डाकवक्ता / बंदोबस्तधारी द्वारा स्वयं अपने खर्च से किया जाएगा।

(vi) बालूघाट की सुरक्षा की जिम्मेदारी सफल डाकवक्ता / बंदोस्तधारी की होगी।

M

(vii) सफल डाकवक्ता / बंदोबस्तधारी बंदोबस्त क्षेत्र के भीतर किसी अवैध खनन के लिए जिम्मेवार होगें और पाई गई किसी शिकायत पर गंभीरता से विचार किया जाएगा तथा सफल डाकवक्ता / बंदोबस्तधारी के विरुद्ध नियमानुसार कार्रवाई की जाएगा।

(viii) सफल डाकवक्ता / बंदोबस्तधारी समाहर्ता द्वारा बालूघाटों के संचालन के संबंध में लोकहित में

जारी निबंधनों और शत्तों तथा निदेशों का पालन करेगा।

(ix) यथोक्त शर्त्तों, बंधेजों एवं निबंधनों का पालन नहीं करने पर कारण पृच्छा निर्गत कर बंदोबस्ती रदद करने की कार्रवाई की जा सकेगी ।

(x) सफल डाकवक्ता/बंदोबस्तधारी को खनन राजस्व/जी०एस०टी०/आयकर/स्टाम्प शुल्क/ रिजस्ट्रेशन फीस का भुगतान नहीं करने की दशा में 30 दिनों के अंदर कारण स्पष्ट करने हेतु नोटिस दी जायेगी। निर्धारित अविध के अंदर सफल डाकवक्ता/बंदोबस्तधारी द्वारा बकाया का भुगतान करने में असफल रहने की दशा में राशि वसूली की कार्रवाई के साथ-साथ बंदोबस्ती रदद करने की भी कार्रवाई की जाएगी।

(xi) नीलामी हेतु प्रस्तावित बालूघाटों से संबंधित तकनीकी तथा अन्य बिन्दुओं यथा भूमि के अंचल, थाना, मौजा, खाता, खेसरा, रकबा तथा GPS Co-ordinate के संबंध में विवाद / त्रुटि पाए जाने पर संशोधन का अधिकार जिला खनन कार्यालय, भोजपुर का होगा। बालूघाटों का सीमांकन एवं नियमानुसार निर्धारित आयाम / विशिष्टियों का सीमा स्तंभ का अधिष्ठापन GPS Co-ordinate के अनुसार बालू बंदोबस्तधारी को कराना होगा तथा खनन के क्रम में संधारित कराना सफल डाकवक्ता / बंदोबस्तधारी की जवाबदेही होगी, जिसे RQP/अंचलाधिकारी की उपस्थिति में प्रमाणित कर बालूघाटों के निर्धारित क्षेत्र का Reduced Level (RL)/Pre-Level (PL) एवं Satellite images खनन कार्य प्रारंभ करने के पहले जिला खनन कार्यालय, भोजपुर में समर्पित करना होगा।

(xii) बालघूाट से लिकं रोड और बालूघाट के बीच कोई प्राकृतिक जल मार्ग सिचांई नहर पड़ती हो तो सफल डाकवक्ता/बन्दोबस्तधारी जल ससांधन विभाग की पूर्व अनुमित से अस्थायी संरचनाएँ खड़ा कर सकेगा। पूर्व अनुमित के लिए ऐसे आवदेन जल संसाधन विभाग के सबंधित मुख्य

अभियंता के समक्ष दिए जाएगें।

(xiii) बालूघाट में रैयती / बंदोबस्त जमीन होने पर संबंधित रैयत से सहमित प्राप्त कर बालू का खनन करना होगा। यह जिम्मेदारी पूर्णतः बंदोबस्तधारी की होगी एवं विभाग से कोई क्षतिपूर्ति का दावा मान्य नहीं होगा।

(xiv) बंदोबस्तधारी द्वारा बंदोबस्ती अवधि के दौरान किसी भी कारण से खनन कार्य नहीं करने की स्थिति में किसी भी प्रकार का मुआवजा / नुकसान एवं क्षतिपूर्ति का दावा मान्य नहीं होगा।

(xv) ई—नीलामी एवं बालूघाट की बंदोबस्ती अवधि के दौरान उत्पन्न किसी भी प्रकार का विवाद बिहार खनिज (समानुदान, अवैध खनन, परिवहन एवं भंडारण निवारण) नियमावली 2019, (यथा संशोधित) के अधीन होगा।

(xvi) सफल डाकवक्ता / बन्दोबस्तधारी को इलेक्ट्रॉनिक माध्यम से भेजी गयी कोई भी सूचना / निदेश / आदेश इत्यादि IT-Act के तहत स्वीकार्य साक्ष्य के रूप में माना जायेगा।

विषय:- भोजपुर जिला के सोन नदी बालूघाट सं0- 39 के खनन योजना के अनुमोदन के संबंध में।

महाशय,

उपर्युक्त विषय के संबंध में कहना है कि बिहार बालू खनन नीति-2019 यथा संशोधित एवं बिहार खनिज (समानुदान अवैध खनन, परिवहन एवं भंडारण निवारण) नियमावली, 2019 (यथा संशाधित 2021) के नियम-17 में वर्णित प्रावधानों के तहत् भोजपुर जिला के सोन नदी बालूघाट सं0- 39 से संबंधित समर्पित खनन योजना के अनुमोदन पर प्राधिकृत समिति द्वारा समीक्षा की गई। समीक्षोपरांत निम्न शर्त्तों एवं बंधेजों के तहत् खनन योजना अनुमोदित की जाती है -

 उक्त खनन योजना केन्द्र सरकार/राज्य सरकार द्वारा विनियमित अन्य सभी अधिनियम/ नियमावली में वर्णित प्रावधानों को तथा किसी न्यायालय/अन्य न्यायिक संस्था द्वारा पारित किये गये न्यायादेश

को बिना प्रभावित किये अनुमोदित किया जा सकता है।

उक्त खनन योजना का अनुमोदन खान एवं खनिज (विकास एवं विनियमन) अधिनियम, 1957 (यथा संशोधित), बिहार खनिज (समानुदान अवैध खनन, परिवहन एवं भंडारण निवारण) नियमावली, 2019 के नियम–17, वन संरक्षण अधिनियम, 1980, पर्यावरण सुरक्षा अधिनियम, 1986, श्रम संबंधी नियम, EMGSM 2020 तथा अन्य सभी सुसंगत अधिनियम/ नियमावली तथा उनमें वर्णित प्रावधानों के प्रतिकूल नहीं होगा। लीज के रकवा के अनुसार प्रति हेक्टेयर कम से कम 10 पौधा लगाना होगा तथा 50 प्रतिशत Survival सुनिश्चित करना होगा।

खनन योजना में निहित शर्तों का पालन करते हुए ही बालू खनिज का खनन् तथा प्रेषण किया

जायेगा।

 संबंधित सक्षम प्राधिकार से यथा वांछित प्रमाण–पत्र प्राप्त कर विभाग को अवगत कराना अनिवार्य होगा।

5. यदि किसी भी समय खनन योजना में वर्णित शत्तों के अनुपालन में अनियमितता पायी जाती है, तो

खनन पदाधिकारी को नियमानुसार आवश्यक कार्रवाई करने का अधिकार होगा।

6. संबंधित बालूघाट में खनिज की उपलब्धता, पहुँच पथ का निर्माण तथा अन्य खनन् कार्यों से संबंधित सम्पूर्ण जबाबदेही बालूघाट संचालनकर्त्ता की होगी तथा इसमें किसी भी तरह का कोई दावा अथवा क्षतिपूर्ति मान्य नहीं होगा।

 खनन योजना मे वर्णित सभी तकनीिक तथा अन्य बिन्दुओं से संबंधित ऑकड़ों की सत्यता / वैधता की जिम्मेवारी RQP/बंदोबस्तधारी की होगी तथा भविष्य में उपर्युक्त के संबंध में किसी प्रकार की

भिन्नता / अनियमितता की पूरी जबावदेही RQP/बंदोबस्तवारी की होगी।

9

- 8. खनन् कार्य के दौरान घाट संचालनकर्त्ता द्वारा पर्यावरण संबंधी मानकों का नियमित रूप से अनुश्रवण करने की व्यवस्था करनी होगी।खनन् कार्य के दौरान नदियों के प्राकृतिक बहाव आदि में किसी भी तरह का व्यवधान/रूकावट/बदलाव करना पूर्ण रूप से प्रतिबंधित होगा।
- बाल्घाट में Secondary Loading की व्यवस्था इस प्रकार सुनिश्चित की जाएगी ताकि गीला बालू का परिवहन नहीं हों।
- ग्राथि खनन योजना में Semi-mechanised mining को प्राथमिकता दी गयी है तथापि Manual Mining पर कोई प्रतिबंध नहीं रखा जाएगा एवं स्थानीय व्यक्तियों को नियोजन देने के दृष्टिकोण से Manual Mining को उचित अवसर प्रदान करना होगा।
- 11. सफल डाकवक्ता / बंदोबस्तधारी द्वारा खान एवं खनिज (विकास एवं विनियमन) अधिनियम, 1957, बिहार खनिज (समानुदान अवैध खनन, परिवहन एवं भंडारण निवारण) नियमावली, 2019 (यथा संशोधित 2021) तथा बिहार बालू खनन नीति, 2019 के प्रावधानों का अनिवार्य रूप से पालन किया जायेगा।

 सफल डाकवक्ता / बंदोबस्तधारी को पर्यावरण सुरक्षा हेतु सभी उपाय करने होगें तथा नियमित रूप से जल / वायु की गुणवत्ता की जाँच / अनुश्रवण की व्यवस्था सुनिश्चित करनी होगी।

 सफल डाकवक्ता / बंदोबस्तधारी को उत्पादन / प्रेषण का आँकड़ा एवं पंजी संधारित करना अनिवार्य होगा जिसे नियमित रूप से अद्यतन किया जाएगा।

14. संचालन करने वाले घाटों की सीमांकन कराना, RL/PL प्राप्त करना एवं उसे खनन के क्रम में संघारित कराना सफल डाकवक्ता / बंदोबस्तघारी की जवाबदेही होगी, जिसे RQP / अंचलाधिकारी की उपस्थिति में प्रमाणित करवाकर खनन कार्य करना होगा।

15. बिहार खनिज (समानुदान अवैध खनन, परिवहन एवं भंडारण निवारण) नियमावली, 2019 (यथा संशोधित 2021) में वर्णित प्रतिबंधित क्षेत्रों में किसी प्रकार का खनन् कार्य वर्जित होगा।

 बालूघाटों से बालू का निष्कासन एवं प्रेषण आबादी से सटे ग्रामीण सड़क को छोड़कर अलग मार्ग से करना होगा।

17. खनन योजना की एक-एक प्रति, जो संबंधित RQP द्वारा प्रत्येक पृष्ठ पर हस्ताक्षरित होगी, निदेशक, खान एवं भूतत्व विभाग के कार्यालय के अतिरिक्त समाहर्ता, भोजपुर के गोपनीय कोषांग, उपनिदेशक, पटना अंचल, पटना के कार्यालय में उपलब्ध कराना सुनिश्चित किया जायेगा, ताकि किसी भी समय इसकी जाँच की जा सके।

प्राधिकृत समिति की अनुशंसा के आलोक में उपरोक्त शत्तों के साथ भोजपुर सोन नदी बालूघाट सं0— 39 से संबंधित समर्पित खनन योजना के अन्तर्गत ही बालू उत्खनन कार्य सुनिश्चित कराया जायेगा।

### 2. PROJECT DESCRIPTION

### 2.1 JUSTIFICATION OF PROJECT

Sand is a ubiquitous material; available everywhere and is being used from the time immemorial for wide applications in our daily life; infrastructures, building construction, highways, roads, townships, multiplexes, foundations of buildings and industrial units etc. and is an integral part of development. Over the millennia, the weathering effect, the flow of water at high velocities in rivers and the pressure of water from the high mountainous reservoirs converted and pushed the hard ground underneath into sand, etc. which travelled as sediments with the flow. Huge amount of sand get deposited along the river course wherever conditions were favorable. As a result of continuous deposit of sand, the rivers may change their course, by widening itself and expanding, can result in flooding, inundation and breaking their banks, may cause devastation of property and loss of life. The rivers thus, needed channelization and therefore, extraction of sand through mining was expedient. The haphazard mining of sand being practiced now for long, through unregulated, uncontrolled and illegal way added almost an irreversible damage to the environment, which became a cause of serious concern to everyone. Though sand is a very important mineral source for development, its mining through scientific methods has also become equally imperative.

It is for this purpose that 'mining plan' is being drawn so that all its aspects are taken care of justifiably, according to law, protecting the environment, removing all adverse impacts and creating a direct and indirect employment opportunities, improving socio-economic conditions of the local inhabitants and all-around status of life, achieving thereby a sustainable development.

Besides the above, the process of mining of minor minerals (Sand) is a constant source of revenue generation to the State Government through Royalty.

#### 2.2 BACKGROUND OF THE PROJECT

The Department of Mines & Geology, Bihar required under Bihar Minerals (Concession, Prevention of Illegal Mining, Transportation & Storage) Rules, 2019 & Bihar Sand Mining Policy, 2019. The general conditions of mining lease for minor minerals are mentioned here below:

- First the State Government shall identify the areas which are suitable for river bed mining based on quantity of the minor minerals available and suitable from ecological and environmental aspects as well.
- Under rule 17 (4) Approval and submission of Mining Plan All Mineral Concession Holders or the Government/Corporation as the case may be shall submit a mining Plan duly prepared by an RQP and approved by the Director or any officer / person/academic institution/Govt, agency authorized by the Department in this regard within a period of three months from the date on which communication regarding grant of mineral concession is received or such other period as may be decided/ allowed by the department for the submission of the approved Mining Plan.
- ➤ While preparing the mining plan, proper attention has been paid to ensure that the relevant provisions under MMDR Act-1957, MMR-1961, Mines Act-1952 & Mines Rules-1955, Sustainable Sand Mining Guidelines 2016 and Enforcement & Monitoring Guidelines for sand Mining 2020 have been followed. All safety measures, provided in the statue, will be taken into consideration. On 17.09.2019 Bihar Government took its policy decision vides notification no. 4/V.Mu-20-93 / 18-3174 /M . That all Mining Lessee / Settlee under rule 17 of the said Rules, the lessee shall submit the mining plan with Progressive Mine closure plan for approval to the competent officer, Department of Mines & Geology, Bihar
- Mining operation to be in accordance with Environmental clearance.
- For baseline, data assistance has been taken from the data, available from local authorities.

### 2.3 Restricted areas for sand quarrying

- i. The quarrying of sand shall be prohibited within up to a distance of 1 kilometre (1 km) from major bridges and highways on both sides, or five times (5x) of the span (x) of a bridge/public civil structure (including water intake points) on up-stream side and ten times (10x) the span of such bridge on down-stream side, subjected to a minimum of 250 meters on the upstream side and 500 meters on the downstream side.
- No quarrying shall be permitted within 50 (fifty) meters of any public place i.e. cremation.
   Ghat or any religious place etc.
- No quarrying shall be allowed to be extracted where erosion may occur, such as at the concave bank.

- iv. The quarrying of sand shall be prohibited within 100 (one hundred) meters upstream and downstream from any dam/weir or any other structure erected for irrigation purpose.
- v. Sand Ghats should preferably be located on the river side embankment. For low embankment less than 6 meters height, quarrying should not be done within 25 meter from toe/heel of the embankment and depth of mining should not be more than 1.0 meter. In case of higher embankments, the distance should not be less than 50 meter and depth of mining should be maximum 1.50 meter and at a distance of 75 meter of more mining depth should be maximum 2.0 meter. In order to obviate the development of flow parallel to embankment, crossbars of width eight times the depth of mining pits spaced at 50 to 60 meters center to center should be left in the mining pits.
- vi. The irrigation outlet shall be maintained at the same level as that of the river bed and in no case, the river bed level shall be permitted to be below the irrigation outlet level. No quarrying shall be permitted around the infiltration well/intake well up to a distance of 5 meters.
- No quarrying of sand shall be permitted in any private land owned by a person other than a settlee unless the settlee obtains the consent of the concerned land owner/raivat.
- No quarrying of sand shall be permitted in any area which the State Government notifies as restricted area.
- ix. Mining depth should be restricted to 3 meters and distance from the bank should be ¼th or river width and should not be less than 7.5 meters.
- Demarcation of mining area with pillars and geo-referencing should be done prior to the start of mining.
- xi. A buffer distance /un-mined block of 50 meters after every block of 1000 meters over which mining is undertaken or at such distance as may be the directed/prescribed by the regulatory authority shall be maintained.
- xii. River bed sand mining shall be restricted within the central 3/4th width of the river/rivulet or 7.5 meters (inward) from river banks but up to 10% of the width of the river, as the case may be and decided by regulatory authority while granting environmental clearance in consultation with irrigation department. Regulating authority while regulating the zone of river bed mining shall ensure that the objective to minimize the effects of riverbank erosion and consequential channel migration are achieved to the extent possible. In general, the area for removal of minerals shall not exceed 60% of the mine lease area, and any deviation or relaxation in this regard shall be adequately supported by the scientific report.

### 3. LOCATION, GENERAL AND ACCESSIBILITY

### 3.1 LOCATION

(a) Details of the area

(i)	Lease-hold area	24.5 Hect.				
	Location	The Bhoj Son 39 Sand Ghat fall in Mauja – Andhary Mahaji (424) & Imadpur, Tehsil - Sahar, District-Bhojpur (Bihar). The location plan is enclosed (Plate No. 1)				
(ii)	Mining Lease Map	Khata no. – 7, 466 Khasra No 28, 29(Part) Google Map of Bhoj Son Annexure no. 2.		hed as		
(iii)	District & State	Bhojpur , Bihar				
(iv)	Mining Plot	Sand Ghat	River	Area (ha)		
	17000000000000000000000000000000000000	Bhoj Son 39	Son	24.5		
		Total		24.5		
(v)	Name of Ghat	Bhoj Son 39 Sand Ghat of 24.5 hectares.				
(vi)	Ghat details	24.5 ha (Son River bed)				
(vii)	Coordinates	The area & geographical coordinates of Bhoj Son 39 Sand Ghat given in Table No.1  Toposheet No 72 C/12				

### BHOJ SON 39 SAND GHAT CO-ORDINATES

S. No	Sand Ghat	Area (in Ha)		Co-ordinates	Ghat/Village	River CFOLOG
1	Bhoj Son 39	24.5	1	25° 12' 29.106" N 84° 30' 12.702" E	Mauja – Andhary Mahaji (424) &	Son 4
			2	25° 12′ 35.068" N 84° 30′ 0.783" E	Imadpur, Tehsil - Sahar, District-	
			3	25° 12' 48.833" N 84° 30' 28.362" E	Bhojpur (Bihar)	
	Distr	18	4	25° 12' 59.204" N 84° 30' 50.317 " E		

5	25° 12' 56.116" N 84° 30' 52.146" E	
6	25° 12' 47.839" N 84° 30' 50.490" E	
7	25° 12' 50.183" N 84° 30' 46.970" E	
8	25° 12' 52.511" N 84° 30' 39.040" E	
9	25° 12' 47.889" N 84° 30' 30.250" E	
10	25° 12' 30.299" N 84° 30' 13.817" E	

### (b) Key plan of area:-

Key plan of Sand Ghat (Son river) is attached as Plate-2.

Total mining area is completely outside of any restricted or protected area by any state or central government.

### 3.2 GENERAL

(a) Mineral being worked	Sand		
(b) Period of Mining Lease	The lease period has been granted for Five years.		
(c) Category of Land used	The mining area is inactive channel of riverbed		
(d) Relief of Plot	Bhoj Son 39 Sand Ghat (73.2 ASML to 71 ASML)		
(e) Existing pits	As the mining area is of river bed and it will be replenished every year no pits will be formed		
(f) Type of lease area:	Total area is almost hundred percent river bed flood plain land & it is free from forest land.		
(g) Present land use pattern:	The existing land use is given below:		

Sr. No.	Land use	River bed (Ha)	Forest Land (Ha)	Barren land (Ha)	Grazing Land
1	Mining pits Quarry	8.88		- (	
2	Approach Road			100	DO - OATON
3	Dumps		-	•	

4	Office, Resht Shelter etc.	্র	*	-
5	Balance undisturbed land	24.5	3.5	
	Total	24.5	-	-

### 3.2 ACCESSIBILITY

Bhojpur district is one of the thirty-eight districts of Bihar state and its administrative headquarters are located in Ara town. It is a part of Patna division. Prior to 1972 the district of Rohtas was part of Bhojpur. In 1972 it (Rohtas) was bifurcated and declared as a new district. The district is known for its rich language - Bhojpuri. It played a major role in India's struggle for independence. Veer Kunwar Singh of Jagdishpur was the leader of the mutineers during the first war of independence in 1857, called the Sepoy Mutiny by the British. The fighting was so severe that two of the five Victoria Crosses ever awarded to civilians by the British were awarded during this battle. Bhojpur district falls within 250 00" to 250 30" N and 840 15" to 840 45" E, the area is bounded by the river Son in the east, Dharmawati-Gangi rivers in the west, Vindhyan hills in the south and the river Ganga in the north. The district is spread over a total geographical area of 3395 sq km. Total population of the district stands at 2720155 with the urban and rural populations of 2331450 and 388705 respectively (census 2011). The decadal population growth of the district is calculated to be 477011 (2001-2011). The district has three Sub Divisions namely Ara Sadar, Jagdishpur and Piro. The blocks of the district include Ara Sadar, Udwantnagar, Jagdishpur, Koilwar, Sahar, Barhara, Sandesh, Shahpur, Charpokhari, Piro, Tarari, Bihia, Agiawon and Garhani.

Project site is falls in village Koilwar. Site is well connected by SH - 81 which is at distance of approx. 1.0 Km in North direction. Nearest railway station is Piro Railway Station at distance of approx. 15 km in NW. Nearest airport is JPN International Airport Patna at distance of approx. 74.0 km in NE.

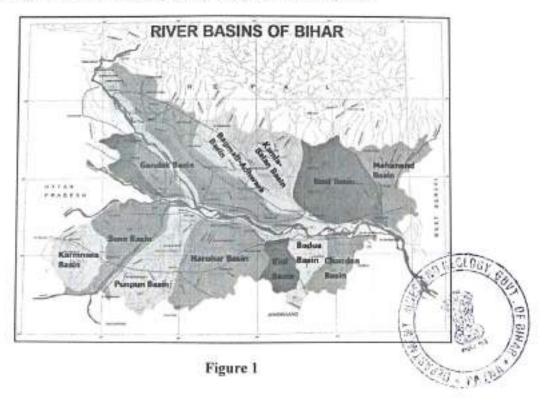

### 4.1 GEOLOGY & EXPLORATION

Topography and general geology and local / mine geology of the mineral deposit including drainage pattern

Bhojpur district is situated in the South Bihar alluvial plains. Bhojpur is an administrative district in the state of Bihar in India. The district headquarters are located at Arrah also known as Ara. The district occupies an area of 2,474 km² and has a population of 1,792,771 (as of 2001). Bhojpur district occupies an area of 2,395 square kilometres (925 sq mi), It is located at a longitude of 83° 45′ to 84° 45′ East and the latitude is 25° 10′ to 25° 40′ North and is situated at a height of 193 meters above sea level. The sand deposits of Bhojpur district of Bihar broadly form part and parcel of the flood plains of Ganga River as whole formed since geological ages.

The State of Bihar is transecting by a no. of rivers. The individual river basins and their catchment areas is shown in Fig. no. 1 below. The various sand mining lease areas (also referred to as sand Ghats) lie in the river bed of river Son which is a major tributary of river Ganga. They are formed in the Quaternary period of central Bihar Plains- the OAG (Older Alluvium Group) forming the highest terrace, in the Son-Ganga alluvial tract, and NAG (Newer Alluvium Group) forming younger terraces, as Older Flood Plains, are exposed all along the Alluvial Upland.

### Ganga & Sone Valley Plains:

The river Son originates at an elevation of 600 m above msl near Amarkantak plateau in Madhya Pradesh (MP), and debouches in the river Ganga near Patna, Bihar. The total length of the river is 784 km, out of which about 500 km lies in MP, 82 km in Uttar Pradesh and the remaining 202 km in Bihar. The important tributaries of river Ganga are Son, Mahatwain, Dharda, Dhowa, Mohani, Punpun, Morhar The total catchment area of the river is spread over 71,259 sq km. The river has a steep gradient with quick run-off and ephemeral regimes, becoming a roaring river with the rainwater in the catchment area, but turning quickly into a formidable stream. The river being wide and shallow leaves disconnected pools of water during summer (lean period).

### Regional Geology

Regionally the area constitutes a part of the Ganga River Basin.

The north-eastern part of Haryana is predominantly characterized by sedimentary lithology in the Sub-Himalayan zone comprising Subathus, Dagshais, Kasaulis and Siwaliks. A general Regional stratigraphic sequence in the area is given below

Showing the Geological Succession and their geographic distribution

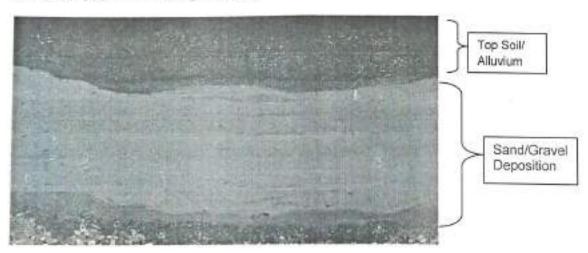

Age	Geology	Occurrences
Quaternary	Alluvial Deposits (Sand, Clay, Silt, Fragments)	North Bihar Plain & Central Bihar Plain
Tertiary	Sand Stones & Clay Stones	North Champaran Hills
Gondwana	Coal Measures, Forming a series of Small outlier basins	Banka District
Vindhyans	Sandstones, Shales, Limestones, etc.	Parts of Bahbhua and Rohtas district
Satpura	Schist, Phyllite, Quartzite	Part of Aurangahan Gaya Nawada, Nalanda Sheikhpura and Munger District
Proterozoic	Mica Schist, amphibolites, quartzite, granite, dolerite and pegmatite	Nawada, Jamui and Banka
Archaean	Gneisses, Granites, Schists, Phyllites, quartzite,	Part of Aurangabad, Gaya, Nawada, Jamui, Banka and

	amphibolites & intrusive all Bhagalp metamorphosed sedimentary and igneous rocks	our
--	--	-----

### GEOLOGY OF THE AREA:

The sand exposed in the River bed of Son and surrounding areas is the product of the deposition of the sediments brought and deposited in the flood plains of River Ganga. These sediments are of recent geological formation. The litho-units exposed within the river and surrounding areas have formed as water borne sediments brought by flood water during rainy season every year and deposited in riverbed.

The litho units encountered in the riverbed and surrounding areas belongs to the Shivalik super groups. The size of the sediments towards the source i.e. host rock is course and at the tale end of the river the grain size is reduced to smaller sizes resulted in the formation of clay beds. The following sequences have been observed in the area, i.e. Top soil/ Alluvium followed by sand deposition (as shown in the figure below).

Sand and silt are deposited in the middle of the river whereas fine sand and soil are deposited at the fringe of the riverbanks.

Soil/ alluvium varying in thickness from 0.20m to 0.60m m constitute the top horizons in the area suitable for agriculture. River Ganga meanders through the area exposing the alluvium and soil at the banks. Sand is found in the river bed upto a depth of more than 3.0 m. The major part of bed remains dry as water flows in a single stream during the non-monsoon seasons. Only during rainy seasons the entire flood plain has water, when there will be no mining done.

# 4.2 ORIGIN & CONTROL of MINERALIZATION (ANNUAL REPLENISHMENT OF MINERAL IN RIVER BED AREA/SEDIMENTATION)

Sedimentation, in the geological sciences, is a process of deposition of a solid material from a state of suspension or solution in a fluid (usually air or water). Broadly defined river sand is a product of natural weathering of rocks over a period of millions of years and these materials get collected under the impetus of gravity alone, as in talus deposits, or accumulations of rock debris at the base of cliffs. The term is commonly used as a synonym for sedimentary petrology and sedimentology.

Sedimentation is generally considered by geologists in terms of the textures, structures, and fossil content of the deposits lay down in different geographic and geomorphic environments,

The factors which affects the "Computation of Sediment":

Geomorphology & Drainage Pattern: The following geomorphic units plays important role:

- Structural Plain
- Structural Hill
- Structural Ridge
- Denudation Ridge & Valley
- Plain & Plateau of Gangetic plain
- Highly Dissected pediment
- Un-dissected pediment
- b) Distribution of Basin Area River wise
- c) Drainage System/Pattern of the area, Rainfall & Climate: Year wise Rainfall data for previous 10 years.
- e) As per Dandy & Bolton study "Sediment Yield" can be related to
- i) Catchment Area and
- ii) Mean Annual Run-off

Sand is an essential minor mineral used extensively across the country as a useful construction constituent and variety of other uses in sports, agriculture, glass making (a form of sand with high silica content) etc. It is common knowledge that minerals are non-renewable out the form of mineral naturally gets replenished from time to time in a given river system and is very much interrelated to the hydrological cycle in a river basin.

Sand mining has become a widely spread activity and does not require a huge set up or technology, the number of ventures has increased extensively and it has become a footboose industry in itself but the backward-forward linkages are becoming stronger as many are getting employed as well as the construction activity / industry requires this mineral at consistent rates. Riverine

environmental systems are unique in themselves and provide environmental services, natural resources to meet variety of needs of urban and rural communities.

### 4.2.1 REPLENISHMENT STUDY OF MINED AREA OF SON RIVER:-

Replenishment Rate is the rate at which Bajri is transported into the river channel, which is under examination or subjected to sand extraction. This volume is often considered as sustainable yield of that river. Estimation of Bajri discharge through stream bed and its residence period (temporary deposition) is one of the most difficult task in sediment budgeting.

The rate of gross or absolute silt production (erosion) in the watershed and the ability of the stream system to transport the eroded material in a river and then to a reservoir has the direct relation with the quantity of sediment delivered into a reservoir. It has been observed that the average rate of sediment production decreases as the size of drainage area increase and the larger watershed the lesser is the variation between the rates. The larger watershed presents more opportunity for deposition of silt during its traverse from the point of production. The total amount of eroded material, which reaches a particular hydraulic control point, is termed as sediment yield. The sediment control of inflow is governed by Character of run-off; Susceptibility of soils; the extent and density of vegetative cover in the area; and the hydraulic efficiency of the drainage system.

This report quantifies the annual replenishment of bed material in the Son River during periods of sediment transport at high flows within the mined area. It provides estimates of the amounts of sand & bajri which will be used in construction and for other uses.

### 4.2.2. METHODOLOGY FOR REPLENISHMENT STUDY:-

The methodology used for Replenishment study is based on the measurement of volumetric survey at selected points as monitoring stations within the lease area in Pre-monsoon season & Post Monsoon season respectively. For the said project replenishment study has been done during the post-monsoon season has done by field survey (volumetric survey) method. Firstly Volumetric Survey was done in the proposed mining block. By this method spot RL/level are marked & mapped and sections are drawn for several monitoring locations within the mine area. After that, for post-monsoon season again spot RL/level are marked & mapped on the same location and sections are drawn. The RL(m) observed during Pre-monsoon season of all locations.

Table 7. volumetric survey measurement

Code	Quantity of Sand
	Cum
111	7,35,000
otal	7,35,000
	111

Replenished quantity of sand = 7,35,000 cum. Or 12,49,500 tonnes.

### 4.3 EXPLORATION

Mining of sand is being done since long time therefore no specific method of exploration is required as the sand, deposited all along the bed and its pale channels, which is very well exposed on the surface. The minerals excavated from the river bed will be replenished gradually during the monsoon season every year. And the area pertaining to paleochannels of the river will be leveled & restored back. Adequate quantity of Sand in reserves is available for meeting consumer demand.

#### 4.4 MINERAL RESERVES

The Mineral reserves have been estimated as per the Indian Standard Procedures. The area of the mining lease is 24.50 Hectares and the average thickness of the river bed minerals estimated as 3.0 mt.

### 4.4.1 Parameters of Reserve Estimation:

The geological reserves have been estimated as per UNFC guidelines in all the three axis.

Economic Axis (E-1): The Sand is exists with in the entire stretch & having no problem selling in the market. The road is near the Ghat & sand shall loaded into tipper with the deployment of an excavator & transport to various parties. The land is State Govt, land & State Govt, has given its consent for the exploitation of Sand on their expensive land. On the feasibility study, economic viability of deposit has been established sand in economic viable, therefore economic axis has been considered as E-1.

Feasibility Status (F-1): Feasibility study has been carried out & is considered to be feasibility status. A feasibility study provides a preliminary assessment with a level of confidence as compared to that of feasibility study. It has been revealed that exploitation of sand is feasible & economic viable & feasibility axis under UNFC code has been considered as F-1:

Geological Axis: The exposure of sand is seen in the entire stretch & thickness of sand varies 2.5m to 3.0m. Therefore geological axis has been considered as G-1.

### Geological Reserves

The geological reserves have been each stretches & for individual blocks, Geological reserves have been completed through cross sectional area method. The area of each section line is multiplied by strike influence to get the volume.

 Proved Mineral Reserves (111): All quantities of sand occurring upto depth of 3 m from surface has been considered as proved reserves.

Classification	Code	Quantity of Sand
A) Mineral Reserves		Cum
Proved Mineral     Reserves	111	735000
	tal	735000

Total Geological Reserve = 735000 cum or 1249500 tonnes

#### 4.4.2 Mineable Reserves:

Mineable reserves have been computed up to 3m depth from surface. Benches having height 1.5m & width 6.0m drawn from the ultimate pit limit. Area of each benches have been calculated multiplied by strike influence to get the volume. The volume multiplied by bulk density (1.7 g/cm3) to get the tonnage.

The minerals excavated from the river bed will be replenished gradually during the monsoon season every year. And the area pertaining to paleochannels of the river will be leveled & restored back.

Table-4.4:- Summary of mineable reserves of Bhoj Son 39 Sand Ghat as below :

### BHOJ SON 39 SAND GHAT OF SON RIVER

The mineable reserves are given in Table Nos.4

Bench Level (mRL)	Length (m)	Width (m)	Depth (m)	Volume (cum)	Tonnes	OF OT DES
73.2-71.7	1455	150	1.5	327375	556537	1900
71.7 - 70.2	1445	140	1.5	303450	515865	THE /
Total				630825	1072402	

Total Mineable Reserve = 630825 CUM or 1072402 Tonnes

<sup>\*</sup>Bulk density is 1.7 g/cm3

- Mineable reserve has been consider 60% approx. of geological reserve after applying the guideline of Enforcement & Monitoring Guidelines for Sand Mining 2020.
- The proposed production grant in LOI is 441000 cum per year which is within the sustainable limit of mineable reserve.
- The BD for Sand has been adopted at 1.70 g/cm3 [Lab Report of Rappid Test Lab Private Limited]

### CLASSIFICATION MINERAL RESERVES:

SAND GHAT	Area (Hect)	Geological Reserves (m3)	Mineable Reserves (m3)	Annual Permitted Reserve As per Lol (m3)
Bhoj Son 39	24.5	735000	630825	441000

The annual extractable RBM comes to 441000 CUM or 749700 Tonnes. It will be replenished after rainy season every year.

### 4.5 LIFE OF MINE

There is as such no specific life of the mine as the area under reference is inactive part of river bed of the river and its pale channels and whatever quantity of minor minerals are extracted from the Applied Area during five year; almost equal to extracted quantity of the same are replenished every year and the river bed area will be leveled & restored back.. However, as lease has been granted for 5 years, mining will be done for the allotted time.

### 5.0 MINING

- Mining will be done as per the guidelines of Bihar Mineral (Concession Prevention of illegal Mining Transportation & Storage) Rules, 2019.
- This is an open-cast mining project. The operation will be semi-mechanized/OTFM with use
  of excavators/JCBs truck /tractors combination or Manually etc. The sand will be collected in
  its existing form.
- Sand Mining will be carried out only upto a depth of 3 m bgl or above ground water level (whichever is less), for river bed block.
- · No drilling /blasting are required as the material is loose in nature.
- Proper benching of 1.5 m height and 6m width will be maintained for mining blocks as per guideline M.M.R-2019, under rule 115(1).
- Mining will be done only during the day time and completely stopped during the monsoon season.

### Restriction on mining:

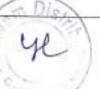

- i) Sand and gravel shall not be extracted up to a distance of 1 km from major bridges and highways on both sides, or five times (5x) of the span (x) of a bridge/public civil structure (including water intake points) on up-stream side and ten times (10x) the span of such bridge on down side, subjected to a minimum of 250 meters on the upstream side and 500 meters on the downstream side.
- No quarrying shall be permitted within 50 (fifty) metres of any public place i.e. cremation.
   Ghat or any religious place etc.
- iii) No quarrying shall be permitted within 5 (five) metres from both banks of the river.
- iv) The quarrying of sand shall be prohibited within 100 (one hundred) metres upstream and downstream from any dam/weir or any other structure erected for irrigation purpose.
- v) Sand Ghats should preferably be located on the river side embankment. For low embankment less than 6 metres height, quarrying should not be done within 25 metre from toe/heel of the embankment and depth of mining should not be more than 1.00 metre. In case of higher embankments, the distance should not be less than 50 metre and depth of mining should be maximum 1.50 metre and at a distance of 75 metre of more mining depth should be maximum 2.00 metre. In order to obviate the development of flow parallel to embankment, crossbars of width eight times the depth of mining pits spaced at 50 to 60 metres center to center should be left in the mining pits.

- vi) The irrigation outlet shall be maintained at the same level as that of the river bed and in no case the river bed level shall be permitted to be below the irrigation outlet level. No quarrying shall be permitted around the infiltration well/intake well up to a distance of 5 meters.
- vii) The extraction of sand shall be permitted only after obtaining a No Objection Certificate from the Water Resources Department in the case of rivers where from irrigation channels are out flowing.
- viii) No quarrying of sand shall be permitted in any private land owned by a person other than the settlee unless the settle obtains the consent of the concerned land owner/raiyat.
- No quarrying of sand shall be permitted in any area which the State Government notifies as a restricted area.
- Sand and gravel shall not be allowed to be extracted where erosion may occur, such as at the concave bank.
- xi) Mining depth should be restricted to 3 meters and distance from the bank should be ¼th or river width and should not be less than 7.5 meters.

### 5.2.1 Proposed method of mining:

- · Mining activity will be carried out by open cast manual/Mechanically method.
- No OB/ waste material will be produced in river bed. The sand shall be exploited upto depth of 3.0m only through the formation of bench height 1.5m & width 6.0m. An approach road having width 6.0m & gradient 1:12 shall be provided for the movement of loading machineries & transportation of sand. The sand shall be exploited with the deployment of an excavator & filled into Tractors/Trucks & transported to various buyers.
- · No drilling/ blasting are required as the material is loose in nature.
- · Proper benching of 1.5 m height will be maintained.
- Roads will be properly made and sprayed by water for suppression of dust.
- Roads in the applied area for the movement of loaded tractors/ trucks will not use slopes more than 1 in 16.
- The mined out area shall be replenished each year during monston period and minimal in maximum original topography.
- Approach roads from the various blocks as already described earlier will be merging with permanent tar roads on both sides of the river for transportation of the mineral to final destinations.
- The Sand transportation shall be insured after the covering the vehicle Tarpaulin.

### 5.3 Year wise Production Schedule:

The annual exploitation of sand from Bhoj Son 39 Sand Ghat are given below :-

YEAR	Over burden (cum)	ROM Sand (cum)	Saleable Sand (cum)
157		441000	441000
2 <sup>ND</sup>	12	441000	441000
3 <sup>RD</sup>		441000	441000
4 <sup>TH</sup>		441000	441000
5711	-	441000	441000

The annual extractable RBM comes to 441000 CUM or 749700 Tonnes. It will be replenished after rainy season every year.

### 5.4 Conceptual Mining Plan

Mine Applied Area will be worked for Bhoj Son 39 Sand Ghat. However, as the digging depth will be restricted to 3.0 m only. This will be further replenished during rainy season. Sand Ghat will be worked systematically as the width is limited while length is much more. As the lease period is only 5 (Five) years, some of the area will be left un-worked at the end of lease period.

- (i) Final Slope Angle to Be Adopted: Height of the bench is limited to 1.5 m while width of individual bench shall be kept 6.0m. River bank side will be protected by working in dry part of the river and by leaving safety distance of the width of the river of 5 meter. Bank side natural slope will not be disturbed. This will prevent collapse of bank and erosion. However, the height of the bank with respect to river bed is varying from 3-4 meters.
- (ii) During plan period workings will be carried out in the Sand Ghat at a time of the Applied Area simultaneously. Scattered workings will ensure safety, remove congestion of vehicles and will have better control and management.

(iii)Ultimate Capacity of Dumps: There will be no OB removal / during the plan period. Therefore no proposal has been envisaged for its separate dumping. No outside material will be filled up in the extracted zone.

The conceptual plan & section of each mining plots are attached with mine plan.

### 5.5 Extent of Mechanization:

The operation will be done by semi mechanized method / OTFM. Following table gives the list of equipment to be used:

Table-5.2:- List of Equipment's to be used

S. No.	Name of machinery	Capacity	Fuel Consumption	No. of Machinery
t	JCB	1.00 m <sup>3</sup>	10 Ltr/hr	2
2	Excavator	2.0 m <sup>3</sup>	16 Ltr/hr	7
3	Trucks	12 tonnes	4 Ltr/hr	200
4	Tractors	04 Tonnes	2 Ltr/hr	150
5	Water Tanker	4000 liter	4 Ltr/hr	2
6	Light vehicles	As per requirement	4 Ltr/hr	1

### 5.6 QUANTITY OF HSD/ FUEL CONSUMPTION PER DAY

Table-5.3:- Quantity of HSD/Fuel to be used

S. No	Machine	Details of fuel (Diesel) requirements	Consumption of Diesel (in lits/ day.)
1.	Excavator & JCB	Number of Excavator & JCB = 7&2  Diesel consumption by 2 jcb & 7 Excavators m/c in one shift working.(i.e- 10/15litre/hr) =2*8*10=160 liters &	1056 liters

		7*8*16= 896 liters	
2	Tippers/Tractors	Number of Tractors & Trucks = 150 & 200 Diesel consumption by 200 trucks & 150 Tractors in one shift working (i.e-4ltr/hr.) & (i.e-2 ltr/hr.) =150*2*8 = 2400 =200*4*8=6400	8800 liters
3	Water Sprinkler	Number of Sprinkler=02 Diesel consumption by Sprinkler in one shift working.(i.e-4ltr/hr). =2*10*4=80 liters.	80 liters
3	Extra	Transport vehicle, super vision vehicle, maintenance vehicle	50 liters
			Total=9986

### 5.7 MINERAL PRODUCTION

The mining will be confined to excavation of sand to an extent depending upon availability and market demand. Production is taken tentatively upto a maximum of **749700 TPA** as per marked demand.

### 6.0 DRILLING AND BLASTING

No drilling and blasting shall be required to for the exploitation of river sand.

21 Prepared by: Prayle Kr. Sinha Reg. No. - RQP:BIH/SR.NO.20 Letter No. 3826 Dated 97/11/2019

### 7.0 MINE DRAINAGE:

 a) Likely depth of water table based on observations from nearby wells and water bodies;

As per the proposed mining, the working shall be confined up to 3.0 m or above the ground water table whichever comes first. Hence no water is likely to be encountered. So there is no need of any such arrangements.

### 8.0 DISPOSAL OF WASTE MATERIAL

No waste as such will be generated at the site as all materials are saleable. If, at all silt clay will be generated along with the minerals will be used to dispose off in the low lying areas as spread, where plantation will be done after spreading top soil on it.

23 Prepared by: Prent Kr. Sinha Reg. No. - RQP/8HUSR.NO.20 Letter No. 3825 Dated 07/11/2019

### 9.0 USE OF MINERALS

Sand has become a very important mineral for expansion of our society due to its many uses. It can be used for making concrete, filling roads, building sites, brick-making, making glass, sandpapers, reclamations, and etc.

#### CHAPTER - 10

#### 10.0 OTHERS

#### 10.1 HAULAGE AND SURFACE TRANSPORT

Mode of transportation of material is by trucks/ Tractors of size of 12 tonnes / 4 tonns capacity have been planned.

Mining area is connected with an unmetalled (approach) road upto the nearest village and thereafter it is metalled road connected to State/National highway. The mine road is adequate to permit easy maneuverability of trucks allowing cross overs and changing points. Water is sprayed two times in a day by tractor mounted water sprinklers until dust remains airborne.

#### 10.2 SITE SERVICES:

A temporary rest shelter will be provided for the workers near to the site for rest.

Provisions will also be made for following in the rest shelter:

- First aid box along with anti-venoms to counteract poison produced by certain Snakes / Reptiles, if any.
- Sanitation facility i.e. septic tank or community toilet facility will be provided for the workers.
- Canteen will be made available near the sites.

#### 10.3 WATER REQUIREMENT

Total water requirement for the project is 8.5 KLD, its breakup is as under:-

Table: 10.1- Water Requirement of the proposed project

S.No.	Purpose	Water Requirement (KLD)
1.	Dust Suppression	4.0
2.	Domestic	01 /5/ 5/3
3.	Green Belt	3.5
	Total	8.5

#### 10.4 EMPLOYMENT:

The manpower requirement for the proposed project is tabulated below. This manpower is the permanent resource which excludes personnel's coming along with trucks / Tractors.

Table 10.2:- Man power distribution of the proposed project

S. No.	Category	Numbers
1,	Administration	1
2.	Supervisor	4
3,	Skilled	9
4.	Un-skilled	30
2000	TOTAL	44

The maximum annual production envisaged is **749700 TPA** which will be achieved every year that implies about 2999 tonnes per day. 250-working days in a year. That implies 44 workers will meet the required production.

#### SAFETY PROVISION:

All provisions in safety rules & regulation will be maintained by providing required materials to the employees. The lessee will provide safety shoes, safety helmets to all the employees. There will be no violation of safety provisions.

## CHAPTER-11

# 11.0 MINERAL BENEFICIATION

Mineral Sand doesn't require processing or beneficiation. The excavated mineral will be directly loaded into the trucks.

40

#### CHAPTER -12

#### 12.0 ENVIRONMENT MANAGEMENT PLAN

#### 12.1 SOLID WASTE MANAGEMENT

In this if top soil will be generated, will be used for purposed of applied for green belt development. Small amount of domestic waste will be generated by the workers at the site, which will be disposed off through proper municipal way. No other waste generation is expected.

#### 12.2 PLANTATION

The area of the proposed project lies in the river bed and devoid of any forest land.

Mining activities in River Bed blocks will not cause any harm to riparian or aquatic vegetation as mining will be only in the dry river bed portions of the river leaving safety distance from the bank. Hence it proposed to plant trees along the banks (wherever possible), along the haul road sides or near the civic amenities in consultation with village authority/local bodies.

In river bed mining cases plantation will be done at the river banks. It is proposed to have plantation along the haul road sides on both sides to provide cover against dust emission and also to act as noise absorber. Plantation will also be carried out as social forestry programme in villages, school/ and the areas allocated by the village authority/local bodies. Every year 50 trees of will be planted with various types of species. List of species is recommended for plantation.

Native plants like Mango, Neem, Kadamb, Kathal, Peepal, Gulmohar, and other local species will selected in suitable combination, so that can grow fast and also have good leaf cover. It is proposed to plant.

#### 12.3 ENVIRONMENT MANAGEMENT PLAN

1.	Top soil storage, preservation and utilization	Present mining area is river bed, therefore no generally no top soil is present, if found then quantities of top soil to be generated will be stacked separately, preserved and used for purposed of plantation therefore no proposal has been envisage for storage preservation & utilization.
2.	Waste dump management	No waste will be generated during mining whatever material is collected is transported in its original shape. Plente no waste management is required.  Small amount of domestic waste is expected, which will be disposed off in a proper way. No

		waste will be thrown into the streams or left on the banks.
3.	Plantation programme	Plantation will be done along both sides of roads and civic amenities in consultation with the local authorities. social forestry programme will also be conducted in the nearby villages.
4.	Quality of air	24 hourly samples twice a week for one month in each season except monsoon will be collected at the mine site and nearby villages and analyzed.
5.	Noise	Excavators used for mining & transportation vehicles used for dispatch of minerals are source of noise pollution at mine site. Hence periodical noise monitoring will be done. Ear muffs/protective equipments will also be provided for safety of the workers.
6.	Quality and make of water including surface and ground water	Mining will not have any impact on surface and ground water, however monitoring of parameters will be done once in each season.
7.	Soil	No major impact on soil due to mining operations is expected. Soil parameters will be monitored once in two years.
8.	Topography & drainage	Mined out area will be replenished every year during monsoon period in each stretches in each block in case of river bed blocks. Hence as such no topographical impact will be seen. A buffer zone will be left on either side of banks as safety measure.  There is no stream crossing through the applied area which would show impact on drainage pattern.
9.	Local transport infrastructure	Trucks/dumpers are main vehicles running on the road for mineral transportation. The present road network is adequate to handle the load of this project. Water sprinkling on the haul roads/link roads will be done two times in a day to keep the dust suppressed.  Also proper parking and traffic transpersent will be followed.

#### CHAPTER-13

#### CONCLUSION:

The proposed project involves collection of sand from inactive channel of river bed of Son river. Safety distance will be left intact to avoid bank erosion. Mining activity will be done except monsoon season. All necessary measures will be taken care to save environment and for safety purposes. Besides this extraction of sand every year will reduce the chance of flood level by removing the deposited mineral. This is very essential in order to prevent widening of the riverbeds and to prevent flooding off and damage to the adjoining areas. The sand extracted is in high demand in the local market which is used in making bridges, road & Building Material, etc.

This project operation will provide livelihood to the poorest section of the society. It provides employment to the people residing in vicinity directly or indirectly by the project. After all the proposed project will increase developmental activities and employment opportunities.

444

# PROGRASIVE MINE CLOSURE PLAN

# PROGRESSIVE MINE CLOSURE PLAN

#### 1.0. Introduction:

1.1	Phone. No. E-mail ID	Satyam Distributors Pro – Yogendra Kumar S/o- Late Bindeshwari Singh Add – 114/35-A, Brahmsthan road, Shekhpura Bagicha, B.V. College, Patna - 800014 9599053015 sharma.yogendra09@gmail.com

1

Prepared by: Paren Kr. Sinha Reg. No. + RQP/IIIII-SR.NO.20 Letter No. 3825 Battel 07/11/2019

Location: Bhojpur Son 39 Balu ghat fall in Mauja - Andhary Mahaji (424) & Imadpur, Tehsil - Sahar, District-Bhojpur (Bihar). The location plan is enclosed (Plate No. 1)

Extent of Lease area: b).

24.50 Hectares

Type of lease area: c).

Total area is waste land & it is free from forest land

d).

Present land use pattern: The existing land use is given below:

Sr. No.	Land use	River bed (Ha)	Forest Land (Ha)	Barren land (Ha)	Grazing Land (Ha)
1	Mining pits Quarry		-	-	-
2	Approach Road	12			
3	Dumps	- 2	-		
4	Office, Resht Shelter etc.	-			-
5	Balance undisturbed land	24.50	-	2	-
	Total	24.50	-	-	

#### Method of mining and mineral processing: c).

Mining will be done as per the guidelines of Bihar Mineral (Concession Prevention of illegal Mining Transportation & Storage ) Rules, 2019.

- This is an open-cast mining project. The operation will be semi-mechanized/OTFM with use of excavators/JCBs truck tractors combination etc. The sand will be collected in its existing form.
- Sand Mining will be carried out only upto a depth of 3 m bgl or above ground water level (whichever is less), for river bed block.
- No drilling /blasting are required as the material is loose in nature.

· Proper benching of 1.5 m height and 6m width will be maintained for mining blocks as NO SEOLOG per guideline M.M.R-2019, under rule 115(1).

Mining will be done only during the day time and completely monsoon season.

tvin Kr. Sinha Reg. No. - RQP/BIH/SR.NO.20

#### 1.1. Reasons for Closure:

The "closure plan is a plan by which reinstate condition can be created, so that justification to the mother earth can be done" said by James E, Hansen. In the case of river bed mining, the excavated sand gets replenished during every monsoon and the area pertaining to palaeochannels of the river will be levelled & restored back to its original topography. More or less, the river bed maintains its previous form, such that the main stream of river remains unchanged.

According to experience and rough estimation of the State Government whatever quantity of minor minerals is extracted from the said area during the year will be replenished every year by the River itself on account of its flow and velocity.

At present there is no foreseeable reason regarding closure of mine. The progressive mine closure plan is being submitted.

3

Proposed by Pavin Kr. Staha Reg. No. - RQP/BHUSR,NO.20 Letter No. 3825 Dated 07/11/2019

#### 2.0 Mine Description:

#### Topography and general geology and local / mine geology of the mineral deposit including drainage pattern

Bhojpur district is situated in the South Bihar alluvial plains. Bhojpur is an administrative district in the state of Bihar in India. The district headquarters are located at Arrah also known as Ara. The district occupies an area of 2,474 km² and has a population of 1,792,771 (as of 2001). Bhojpur district occupies an area of 2,395 square kilometres (925 sq mi), It is located at a longitude of 83° 45′ to 84° 45′ East and the latitude is 25° 10′ to 25° 40′ North and is situated at a height of 193 meters above sea level. The sand deposits of Bhojpur district of Bihar broadly form part and parcel of the flood plains of Ganga River as whole formed since geological ages.

The State of Bihar is transecting by a no. of rivers. The individual river basins and their catchment areas is shown in Fig. no. I below. The various sand mining lease areas (also referred to as sand ghats) lie in the river bed of river Son which is a major tributary of river Ganga. They are formed in the Quaternary period of central Bihar Plains- the OAG (Older Alluvium Group) forming the highest terrace, in the Son-Ganga alluvial tract, and NAG (Newer Alluvium Group) forming younger terraces, as Older Flood Plains, are exposed all along the Alluvial Upland.

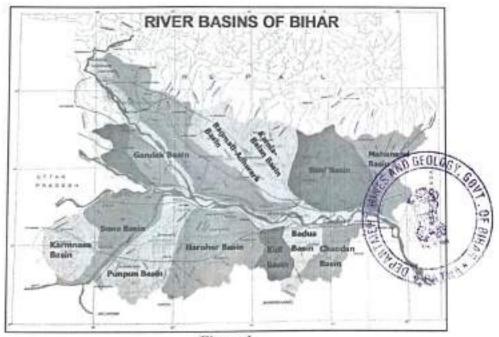

Figure 1

4

Propared by Plavin Kr. Sitha Reg. No. - ROPARISOSR.NO.20 Letter No. 3823 Dated 07/01/2019

#### Ganga & Sone Valley Plains:

The river Son originates at an elevation of 600 m above msl near Amarkantak plateau in Madhya Pradesh (MP), and debouches in the river Ganga near Patna, Bihar. The total length of the river is 784 km, out of which about 500 km lies in MP, 82 km in Uttar Pradesh and the remaining 202 km in Bihar. The important tributaries of river Ganga are Son, Mahatwain, Dharda, Dhowa, Mohani, Punpun, Morhar The total catchment area of the river is spread over 71,259 sq km. The river has a steep gradient with quick run-off and ephemeral regimes, becoming a roaring river with the rainwater in the catchment area, but turning quickly into a formidable stream. The river being wide and shallow leaves disconnected pools of water during summer (lean period).

#### Regional Geology

Regionally the area constitutes a part of the Ganga River Basin.

The north-eastern part of Haryana is predominantly characterized by sedimentary lithology in the Sub-Himalayan zone comprising Subathus, Dagshais, Kasaulis and Siwaliks. A general Regional stratigraphic sequence in the area is given below.

Showing the Geological Succession and their geographic distribution.

Age	Geology	Occurrences	
Quaternary	Alluvial Deposits (Sand, Clay, Silt, Fragments)	North Bihar Plain & Centra Bihar Plain	
Tertiary	Sand Stones & Clay Stones	North Champaran Hills	
Gondwana	Coal Measures, Forming a series of Small outlier basins	Banka District.	
Vindhyans	Sandstones, Shales, Limestones, etc.	Parts of Bahbhua and Rohtas District	
Satpura	Schist, Phyllite, Quartzite	Part of Aurangabad, Gaya, Nawada, Nalanda Sheebages and Munger District	
Proterozoic	Mica Schist, amphibolites, quartzite, granite, dolerite and pegmatite	Nawada, Jamui and Banka District	
Archaean	Gneisses, Granites, Schists, Phyllites, quartzite, amphibolites & intrusive all metamorphosed sedimentary and igneous rocks	Part of Aurangabad, Kraya, Nawada, Jamus Banka and Bhagalpur District	

5

Prepared by Pravia Kr. Sinha Reg. No. - RQP/BHESR.NO.20

#### GEOLOGY OF THE AREA:

The sand exposed in the River bed of Son and surrounding areas is the product of the deposition of the sediments brought and deposited in the flood plains of River Ganga. These sediments are of recent geological formation. The litho-units exposed within the river and surrounding areas have formed as water borne sediments brought by flood water during rainy season every year and deposited in riverbed.

#### DETAILS OF EXPLORATION:

#### a) Already carried out in the area:

No exploration has been carried out as sand lies all over the area & average thickness of sand is 3.0 m & area replenish every during the monsoon period. Therefore is no exploration has been carried out.

#### b) Proposed to be carried out:

Sand average thickness of 3.0 m lies all over the area & area replenish every during the monsoon period. Therefore no proposal of exploration has been given.

#### 2.2 Reserves:

#### BHOJPUR SON 39 BALU GHAT

#### Geological Reserves : -

Classific	Classification  A) Mineral Reserves		Code	Quantity of Sand
A)				Cum
l) R	Proved eserves	Mineral	111	735000
	e-control ed	Total		735000

Total Geological Reserve = 735000 cum or 1249500 tonnes

The mineable reserves are given in Table Nos.4

Bench Level (mRL)	Length (m)	Width (m)	Depth (m)	Volume (cum)	Tonnes
73.2-71.7	1455	150	1.5	327375	556537
71.7 - 70.2	1445	140	1.5	303450	515865
Total				630825	1072402

Total Mineable Reserve = 630825 CUM or 1072402 Tonnes

6

Prepared by Powie Kr. Sirha Reg. No. - RQP/IIII/SR.NO.20 Letter No. 8235 Dated 8291/2019

- Mineable reserve has been consider 60% approx. of geological reserve after applying the guideline of Enforcement & Monitoring Guidelines for Sand Mining 2020.
- The proposed production grant in LOI is 441000 cum per year which is within the sustainable limit of mineable reserve.
- The BD for Sand has been adopted at 1.70 g/cm3 [Lab Report of Rappid Test Lab Private Limited]

#### · CLASSIFICATION MINERAL RESERVES:

SAND GHAT	Area (Hect)	Geological Reserves (m3)	Mineable Reserves (m3)	Annual Permitted Reserve As per Lol (m3)
Bhoj Son 39	24.5	735000	630825	441000

The annual extractable RBM comes to 441000 CUM or 749700 Tonnes. It will be replenished after rainy season every year.

#### 2.3 Mining Method:

#### Existing Method of mining:

It is fresh grant case of mining lease & at present no mining is being carried with the applied area.

#### b) Proposed method of mining:

- Mining activity will be carried out by open cast semi mechanized/OTFM method.
- No OB/ waste material will be produced in river bed. The sand shall be exploited upto depth of 3.0m only through the formation of bench height 1.5m & width coun. An approach road having width 6.0m & gradient 1:12 shall be provided for the movement of loading machineries & transportation of sand. The sand shall be exploited with the deployment of an excavator & filled into Tractors/Trucks & transported to various buyers.
- No drilling/ blasting are required as the material is loose in nature.
- Proper benching of 1.5 m height will be maintained.
- Roads will be properly made and sprayed by water for suppression of dust.

7

- Roads in the applied area for the movement of loaded tractors/ trucks will not have slopes more than 1 in 16.
- The mined out area shall be replenished each year during monsoon period and maintained in maximum original topography.
- Approach roads from the various plots as already described earlier will be merging with permanent tar roads on both sides of the river for transportation of the mineral to final destinations.

#### 2.4 Mineral beneficiation:

No mineral beneficiation will be under taken for next five years. The sand shall be exploited semi mechanized with shovel tractor trolley/tippers combination & transport to parties.

3.0 Review of implementation of mining plan / scheme of mining including five years progressive closure plan up to the final closure of mine;

At is fresh grant case of mining lease it is therefore premature to make any comments about review of implementation.

#### 4.0 Closure Plan:

#### 4.1 Mined out land:

Mining is proposed in one block. The mining shall be carried out during post monsoon season & depth of mining shall restricted 3.0 m. Mining operation shall be suspended during monsoon period. The mined out pit shall be replenished during the monsoon period by sand and silt & leveled it. After over the monsoon period the replenish material shall be exploited manually as well as by means of an excavators & this process will continue.

The area already degrades due to mining & likely to be used during next five years is given below:

Activities	Area already used (Ha)	Area likely to be used in mining (Ha)
Pits & quarries	-	24.50
Approach road		*
Top soil Stack		
Interburden dump	¥	
Backfilled pit		
Total	2 10	24.50

#### (A) Mining:

Sl.No.	Activities	Area (Ha)
1,	Area already broken up	
2.	Area already backfilled /reclaimed	1927
Sl. No.	Activities	Area (Ha)
1.	Additional area proposed to be broken during next five years	
2.	Additional area proposed to be replenished with flood water	- 5010

#### (B) Dump:

Sl. No.	Activities	Area (Ha)
L	Area already covered by dump	Nil-
2.	Additional area to be covered by soil stack	-
3.	Additional area to be covered by interburden dump.	Nil
4.	Dump area to be covered by protective measures	

#### (C) Plantation:

St. No.	Activities	Area(ha)
1,	Area already covered under plantation	-
2.	Area proposed to be covered under plantation in next five years (with in area)	
	Total	

#### 4.2 Water Quality Management:

No ground water bodies exist within the area & no seasonal Nalla exists with in the area. The rain water accumulates in the pit & water percolates in to ground water.

Further no significant impact on water quality is anticipated as material exposed will be Sand & its shall very feebly react with water that too when water becomes acidic. Even of reaction takes place it gives arise to increased temporary hardness of water. Water is being supplied from the Tubewell.

#### 4.3. Air Quality Management:

The mining shall be carried out semi-mechanized/OTFM with use of excavators/JCBs truck /tractors combination or Manually etc. No adoption of drilling & blasting mining shall be carried out in shallow depth. No doubt the mining in this remote area will deteriorate the air quality. The base line values are too low due to remoteness of the area with our past experience. In this kind of terrain, the SPM, SO2 and NOX will always below 100, 10 & 10 microgram per meter cube respectively. Air quality monitoring shall be conducted once in a year as per CCOM'S circular No 3/92.

#### 4.4. Waste management:

No waste shall be generated due to mining activities. All quantities of sand to be generated shall be bold in the local market. Therefore no proposal of waste management has been envisaged.

#### 4.5 Top Soil Management:

No soil shall be generated during plan period & no proposal has been envisor separate stacking & this management.

#### 4.6. Tailing Dam Management:

No tailing dam is proposed in the soapstone mine.

10

#### 4.7. Infrastructurer

No introducture facilities like serial repoway, conveyor belts, building & structure, water treatment plant, transport & water supply sources are present within the lease area. Therefore no utilization & their physical stability & maintenance will be required. Also no inflastructure facilities like telephone line, water pipe line, sewer line, gas pipe line, electrical cables, culvert, bridges are not existing within the lease area. So question does not arise for their restoration. The approach road possed within the lease area & lesses shall maintain it during PMCP period.

## 4.8. Disposal of Mining Machinery:

It will be openess semi-mechanized mine. No disposal of mining machineries shall be envisaged during plan period.

#### 4.9. Safety and Security:

- 1. Each worker shall be provided with helmets & safety shoes.
- 2. Safety belt shall be provided to workers a working the top benches.
- Hanging of loose materials shall be removed from mine faces.
- 4. The mining area shall be properly fenced to avoid any inadvertent entry in to mining pit.
- Working hours shall be displaced at conspicuous places.
- Mining shall be carried out thought the formation of benches maintaining overall pit slope 60deg.

# 4.10 Disaster Management and risk assessment:

The mining is proposed in a gentler agricultural field. The mining will go up to the economical depth of 3m therefore, no disaster management and risk assessment shall be observed. However during monsoon period the area shall be properly fenced with barbed wire to avoid any inadvertent entry of any live stock.

H

Prepared by Produc Kr. Sinha Meg. No. - ROPHHISH.NO.10 Letter No. 1825 Bank (1701-1701)

#### 5.0. Economic repercussions of closure of mine and manpower retrenchments:

All the workers being employed are contractor labours. An any industry will provide direct and indirect employment. The local residents will earn tremendous amount of money due to mining activities. It will change their life style. Due to closure of mine, it will create very negative impact on the economy of the workers for their survival. Those earning good money will get some occupation for survival of their families. The literate workers will move here and there for the search of job. In the overall view the closure of mine will give very bad impact on the society and surrounding areas.

- 5.1 Local residents of nearby villages will be employed in the mine. The family occupation is most by farming. Few of them occupation carpentry & masonry.
- 5.2 The lessee pay each year about 5,000 to 10,000 as a compensation for the sustenance of the few workers family.
- 5.3 About 30% of the workers employed in mine are independent but they are controlled depended by their family members.
- 5.4 The local residents will be employed in the mining operations, and allied activities related to mining operations.
- 5.5 During mining operations the land owners & society of the area shall earn lucrative amount of money from direct & indirect activities. Individual land owners shall also earn good amount of money in terms of royalty. Most of them will spend money to establish other business also. After mining, the total land shall be backfilled & agricultural activities shall be recommended. No repercussion should be observed during the closure of mine.

12

Prepared by Aprecia Kr. Sinha Reg. No. - ROPHIRESE, NO. 20 Lester No. 3825 Dated 07/11/2019

#### 6.0 Time Scheduling for abandonment:

It is proposed in the mining plan that mining will open from lower levels and subsequently advance towards higher elevations so that concurrent reclamation will be under taken to restore the topography of area. The mined area will be replenished during the monsoon period.

The year wise schedule of completion of quantities is given below:

YEAR						
1	п	Ш	IV	V		
				-		
		-				
50	50	50	50	50		
		1 11	1 II III  	1 II III IV 		

The tentative cost of implementation of activities during next five years is given below:

SL No.	Activities			Year	Total amount on Rs.		
	Activities	1	11	Ш	IV	V	
1.	Toe wall (soil stack Rs. 40/m)		•		•	-	•
2.	Retaining at the edge of backfilled wall pit (Rs. 50/m)	-	-	23			
3.	Plantation (Rs. 1000/- sapling with in the area)	50	50	50	50	50	250000
	Total						250000

The tentative cost (In Rs) of implementation of activities during next five years is given below:

Tree guard @ 800 per unit	800	
Per plant species cost	1.00	
Average Water demand cost per species Per Year	100	
Total	1000	

# 7.0 Abandonment Cost:

The tentative cost for implementating the protective and rehabilitation measures, the proposal given in the mining plan for next five years period is as under:

	Year						Rate	Amount	
Activity	1	II	Ш	IV	V	Total	In Rs.	In Rs.	
i) Toe wall at the base and side of soil stack (mtr)			-		9		40/m	-	
iii) Retaining wall at the edge of backfilled pit (m)						-	ě	-	
iv) Plantation ( no. of sapling with in the area.)	50	50	50	50	50	50	1000/-	250000	
v) Reclamation(Cum.)			20		52		40cum		
Total				4				250000	

## 8.0 Any other information:

Community Development: The expensed increased towards the socio-economic development is given below:

Proposed Action Plan Towards socio	First Year to Fifth Year				
economic development	Expenditure proposed (in Rs.)	Expenditure in occurred (in Rs.			
General Development of the area		-			
i) Housing	50,000				
ii) Water Supply	25,000	-			
iii) Sanitation	20,000				
iv) Health, Safety & Medical Facilities	30,000				
Education & Training	30,000				
Employment to local inhabitants; Land owner compensation; Supervisor & Headers etc.	1,00,000	•			
Public Transportation & Communication	20,000	9			
Recreation & other sports activities	20,000				
Expenditure for environment management	15,00,000	*			
Others (Compensation to land owners)	80,000	7			

#### 9.0 Financial Assurance:

The financial assurance has been calculated on the basis of following parameters:

SI. No.	Head	Area put on use at start of plan ( In Ha)	Additional requirement during plan period. ( In Ha)	Total (in Ha)	Area considered as fully reclaimed & rehabilitated (In Ha)	Net area considered for calculation (In Ha)
1.	Area under mining	-	24.50	24.50	24.50	0
2.	Storage for top soil	2		+		0
3.	interhurden/ dump					0
4.	Mineral storage					0
5.	Infrastructure (Workshop, administrative building etc.)		*			0
6.	Approach Road					21
7.	Railways					0
8,*	Green Belt		-			20
9.	Tailing pond		**	- 53		0
10.	Effluent Treatment Plant	85	r.			0
11.	Mineral Separation Plant		-		12	0
12.	Township area	1 1	49	*	14	-0
13.	Others to specify (retaining wall + toe walls	9	8	8		20
	Grand Total		24.50	24.50	24.50	

The total mined out area shall be replenished each year during monsoon period & no broken area will be remained in the applied area. Therefore, it is not possible to calculate financial assurance at this stage.

#### Date:

Place: Bhojpur

 Plantation will be done along both sides of roads and civic amenities in consultation with the local authorities

6<sup>th</sup> Floor, ITPI Building, Ring Road, I.P. Estate, New Delhi Scheme for Accreditation of EIA Consultant Organizations Accreditation Committee Meeting for Initial Accreditation held on

#### December 20, 2019

The following members were present during the meeting:

1.	Prof. B.B. Dhar	W 14
	Prof. C. P. Kaushik	- Chairman
3.	Dr. P. Ahujarai	- Member
	Dr. J. P. Gupta	- Member
	Prof. Umesh Kulshrestha	- Member
6.	Mr. A. K. Ghose	- Member
	Wit A. K. Gnose	- Member

Dr. S. R. Wate, Prof. Rajesh Khanna and Prof. G. J. Chakrapani expressed their inability to attend the meeting.

Prof. B. B. Dhar chaired the meeting in absence of Dr. S. R. Wate.

Mr. A.K. Jha – Senior Director, Dr. Pawan Kumar Singh – Assistant Director and Mr. Vipin Pant– Accreditation Officer were present in the meeting.

Following case was discussed and decisions taken thereof are:

## 1.0 Case of Initial Accreditation

# 1.1 P and M Solution, Noida

P and M Solution, Noida has been assessed as per Version 3 of the Scheme. Result of Initial Accreditation (IA) assessment is given below-

### 1.1.1 Category of Approval:

The organization has scored more than 60% marks therefore, is accredited with Cat. A.

## 1.1.2 Scope of Accreditation

SI. NABET Scheme Sectors	Sector Description	Cat.	Sector Number (MoEFCC Notification dt. Sep. 14,2006 & Amendments)
